Subject: FT-101 vs. TS-520?

In article <394DF705.C1D3F900@mindspring.com>, Will
writes:

>One other question (and thanks to those who have replied): what is the
>difference between the 520, the 520S, and 520SE versions?

Hello Will,

While my experience with them is limited, I would favor the 520 over the 101.
There are actually many versions of the 101, and some of the early ones had
some odd problems.

The 520 has an AGC off position, which not many rigs have. It's very useful on
CW. Also uses the common 6146 final, rather than the sweep tubes in the 101
(but there is a mod for the 101 to use 6146s)

TS-520: 80-10 meters, white dial, early version. Good, but not the best.

TS-520S: 160-10 meters, gray dial, hookup for DG-5 digital readout

TS-520SE: 160-10 meters, no provision for DC operation. Late model, somewhat less expensive.

There is also a very rare version with the digital readout built-in.

I'd look for a clean 520S or SE. Main points would be condition, CW filter, and whether it had the DG-5.

As to rising prices, I've noticed an odd effect over the past 33 years as a ham. It seems that when a rig is current, its value is pretty high. Then as it gets older, its price slowly drops until it reaches a minimum at age 20-30 years. After that, it becomes an "antique" or "collectible" and its value rises again - often beyond its purchase price!

About a decade ago I saw a mint condition 75A4 with all the filters at a hamfest for $250 - and it wasn't selling. Today that same receiver would get several times that - even off eBay!

I have the TS830S and the Ft101E , i like them all , they both have
nice features, but I think that mechanically FT101E is more sturdy.

Subject: Hallicrafters digital! clock radio, this an Asian import?

See the newsgroup alt.binaries.pictures.radio for the article:
Subject: Hallicrafters digital clock radio(!) [1/1]
It is a picture of an alleged Hallicrafters radio set, but it
is just an AM/FM analog tuned solid state digital clock radio!
Did some Asian outfit buy the Hallicrafters name?

Date: Fri, 23 Jun 2000 14:45:22 -0500 (CDT)
From: Bis_Wichy@webtv.net (=?ISO-8859-1?Q?-_WD=D8HCO_-_Dallas_TX_-?=)
Subject: Hallicrafters digital! clock radio, this an Asian import?

Several companies had owned the Hallicrafters name. Last ham rig was
produced in 1972 -73.

The name was then sold. Saw some Jap Radios and one Jap CB with the
Hallicrafters name.

Several individuals bought the name in the hopes of starting a business
but all failed and went bankrupt. No one seems to know who the names
owner is now...

Not that it matters - except for a few hams and SWLs, no one under 30
seems to remember the Hallicrafters brand (or admits to knowing it)

Pity - they made some fantastic radios at prices normal folks could
afford...

Subject: Halli SX-28's LF amplifier tech questions

>1. design guidelines and pro's and con's of the approach
>2. working conditions of the pre- and final- amplifier (A, AB,AB1,AB2,..)
>3. what is the C40 function?
>4. What is the C76-R43 network useful for?
>5. Why is R37 shorted when the "bass" switch it in the OUT position?
>Shouldn't it remain in for the sake of symmetry with the inverter plate
>resistor R36?

Emanuele,

The audio section in the SX-28 uses the approach where the preamp drives one
half of the push-pull pair, then the grid resistor from this half is tapped and
the signal is taken from the tap and amplified by the other half of V12 to
provide the opposite phase. This approach yields high gain and was fairly
common in it's day. The S-27 and S-36 amplifiers were similar. Though I haven't
actually measured the bias voltages, I suspect the outputs run close to AB1,
while the preamp is A. C40 is probably a phase correction to insure stable
operation. C76-R43 similarly roll off some of the high frequencies, or might be
to give some protection of the output transformer if the load is momentarily
removed while signal is present. Regarding the bass switch and R37, that is a
real mystery. I never noticed this before. I wonder if the circuit is REALLY
wired that way, or if it is a misprint on the schematic. I suspect the latter
since LC network CH2 and C43 as well as the C42 and the TONE potentiometer R35
are shown shorted in the IN position of the switch. Operationally, my SX-28
TONE control works in either position of this switch, so something is strange
somewhere. If yours is already apart, trace the circuit around the switch. Let
me know what you find.

From: "Leith Jennings"
Subject: KWM2A Disaster

Hi all
I have just received a KWM2A from upstate NY. It was packaged in the CC-2 carrying case and securely packaged in a box. It must have been dropped and the case opened and the radio bounced around in the case on it's face for 14,000K. Hindsight is a wonderful thing and if the CC-2 had been tied or taped shut, the severe damage wouldn't have happened. However.... it's not a perfect world and !

I need help in locating the following parts for my basket case KWM2-A.....

1. A meter complete or a meter housing (The meter guts appears to be undamaged but the case is smashed)2. A main dial escutcheon plate (black phenolic with KWM-2A engraved on it)
3. A main tuning knob complete with finger inset.
4. A PA tuning knob.
5. The thin escutcheon plate that covers the band switching card.

I am pretty sure that I can remove and straighten the front panel.

Any help would be appreciated.

Here are the tidbits of info I have on my "master card file" --

TS-452/U FM Microvoltmeter/Scope/Signal Generator
manual is TM 11-2695
also try USAF T.O. 33A1-8-89-12 (sorry, don't have either here)

covers 5 to 108 MHz in 6 bands
115VAC, single-phase, 50 to 1600Hz input power
metal carry case
90 pounds
originally cost govt. $475
In Oct. 1963 E.C.Hayden surplus house sold them for $75

Hello Johny, how you been? what time will you be arriving at Shelby? I haven`t
decided yet ,possibly about Wed . I`ll be looking for you .. on the diode bias
for the SB 220, series about 10 diodes rated at 400v @ 3 amps Radio Shack
1N5404 ..this will give you about 6 volts of bias .. you can tap the string to
set idleing current but 6v should be all OK for pair 3-500s... I use this all
along , you can get a good deal on Zeners at K2AW silicon alley adv in QST..
73 see ya Harold W4PQW

Subject: Need Parts - Kenwood T-599D Transmitter

Hello fellow boat anchor users,

I am trying to repair my T-599D, which suffered a "meltdown" in the Bias
Control circuit board when a final tube developed a screen grid to control
grid short. I need two high voltage transistors, made originally by Hitachi.

They are part numbers 2SC856 and 2SC857. RF Parts does not list these types. Pacific Coast listed them but could no longer supply them. So if anyone out there knows where these parts (or functional equivalents) might be available, I would very much appreciate hearing from you.

Thanks and 73,

I've often wondered about this assertion (guns being inherently more dangerous because of their design goal). Two facts come into play: cars are not expressly designed to injure people. How do the gun control people reconcile that fact, the number of people harmed by cars, the number of people harmed by guns, and the design goals of each?

Second fact. I suppose I'd better say "fact". I read it in '73 magazine so who knows. Anyway, Wayne Green claims that when gun control was enacted in Austrailia the crime rate soared. This goes to the argument the anti-gun-control folks put forward - that only criminals will have guns. Anyway, how do the pro-gun-control people respond to it. I do not find fault with the fact that if guns are outlawed, then only criminals will have guns when understood to mean outlawing possession

for the ordinary citizen. I definitely want U.S. soldiers
to be very well armed!

Guns are by no means expressly designed to injure people. They are expressly designed to propel projectiles. The intent (and the lack of skill and training) of the individual operating the gun can and does cause injury to people.

Just like a car. The intent and the lack of skill and training skill of the person opertaing it can and does cause injury to people.

Your correct reply does not represent the pro-gun
control people's thinking. They claim guns are
designed to hurt people - see Leonard Martin's

post. I've heard that argument time and time again.
The same people who are vehemently opposed
to gun ownership by ordinary people never say
we ("ordinary people") should not own cars. Yet
far more people are killed/injured by cars. If saving
lives was the true motivation, I would think that the
pro-gun-control people would be as vigorous in seeking
a solution to automobile related death/injury as they
are in seeking gun control. But I want to hear from
those who claim that a gun " is an object expressly
designed to injure people" on this point. Their "logic"
escapes me.

Ah yes, comparisons can be drawn along the lines of similarity of "projectileness" and of dangerousness of guns and cars, and they have some merit. However, what you are not aware of is that, in public policy and legal reasoning, another step is invariably taken once a partially-successful analogy such as that between cars and guns is drawn. In this second step the decision maker proceeds to "weigh" the usefulness of the thing in question against its dangerousness in deciding what degree of regulation to place on it. That is, even if thing "x" is found to be similar, in degree of dangerousness, to another thing that is lightly regulated, a court will nevertheless find greater regulation called for in the case of "x" if its social utility is less.

E.g., in the early days of railroads, countless accidents convinced courts that trains were extremely dangerous--perhaps as much so as explosives. Nevertheless, courts declined to impose liability without proof of fault for injuries caused by train wrecks, as was commonly done with injuries caused by explosives. The reason: Judges recognized that trains were a technology that was growing ever more vital to the development of the US economy. The enormous social usefulness of trains simply OUTWEIGHED the considerable harm they caused.

Similarly, automobiles have, factually, become essential to the day-to-day functioning of our society, so the law, recognizing the WEIGHT of that essentialness, permits cars to continue to be owned and not heavily regulated. If any gun enthusiast, on the other hand, really believes that guns have a similar practical importance, then I have a really interesting argument concerning why he should give me all his money that I'd like an opportunity to present to him.

To put it briefly, cars cause a lot of harm while making very great contributions to the functioning of society, so no-one wants to outlaw them or severely limit their ownership. Guns, in a civilized, policed society, have very little utility, while causing as much or more harm than cars. Therefore it is rational to regulate them heavily and limit their ownership.

And no, the facts that you love your gun, that owning it connects you to a tradition of manly activity that makes you feel good, or even that, in some HYPOTHETICAL future period of fascism here in the USA you could use your gun to resist oppression--none of these, as a matter of logic and reason, OUTWEIGHS all the huge amount of death and other harm that guns now cause.

That's why we have logic, reason, and law, by the way--so we wont be swayed by emotional factors like the ones just named into making bad decisions!

I don't frequent this group to often for chat just read. But, I saw this post & had to read it.

You guys are just a riot. I can;t beleive so of you actually have to make excuses just to bring in a radio.

Some of you guys ideas are just laughable. I'm glad I'm a radio collector. I have 2 boatanchors myself. Along with several other radios.

Steve I have to correct you on one thing. In the bible GOD said wife's submit to your husbands. Not women be submisstive to men. That had nothing to do with boatanchors. Or radios let along TV's and such.

Nice try. But, us woman aren't stupid.

WE buy, restore, sell & collect radios, TV's & appliances. So, I know what room means in the house. I make sure my husband tells me ahead of time he's getting something & how much room it will take up anywhere in the house or garage.

So, we can make room for it before he or I buy the item. It helps to plan ahead. My husband works with me on this & we watch out buget just in case it's to much to soon.

Building shelves in your garage & house helps out alot. It's true there no such thing as to much stuff as long as you have a place to put it.

Plus, keep stuff does help fix other stuff later. Also have sales every once in awhile helps as well. Looking through your stuff & deciding what you might need to keep & what has sat around for several years that needs to go helps the wife stay off your back as well.

Finding people that are looking for that part on line on radio buy, sell, trade helps it get gone quicker.

So, there are ways to make the wife happy. Just use common since. We do and it makes a great marriage in such a hobby.

Sincerely Paula Wood
Ft. Worth Texas. PS. Keep on Collecting Collectors.

> do you suggest to mount a little fan to vent the rf stages?

Your tubes are working well.
A little lower output on 10 is normal, even with new tubes.
As long as you have room around the rig for air to circulate,
they should be fine. Adding a fan just packs dust into the
RF area, eventually leading to arc-overs when the dust
gets too deep in the tuning caps. You could use a filtered
fan, but it really isn't needed.
Kind Regards,
Dave S. AB5S

Subject: WANTED: Transmitter info

Call me crazy ("you're CRAZY") but I want to operate separates. That's the way it was in the old days, and now that I have my ticket back after a few intervening decades, I'd like to pick up where I left off. Have a Drake R8B with which I'm well impressed -- very fine receiver (especially those 5 touch-of-a-button filters, even if they are LCs). But where are the transmitters?

Question: When were the last transmitter manufactured -- date, manufacturer, model number. And any info, comments, recommendations, etc. on any of same. And other than swaps or eBay, any particular sources for acquiring them?

Prefer direct e-mail, but post to newsgroup if you like.

Thanks,

Gary
KD5KQW (excellent excuse for a vanity call, no?)

Subject: Want RBB or RBC parts.

Tony, thanks for responding.
When I was in the Navy I was in Antartica for 1 1/2 years (1960-1962)
Most of the comm gear was from WW2 including RBCs. They neaver failed.
Thouhgt it would be fun to bring one back to life. I also have the RBB
but no power supply. I can make one that will do from my junk box.
It would be fun to have a TBL too but I think that would be a bit much.

Charlie,

Where are you located ??

I have both the RBC and RBB w/Powersupply that I
am thinking of parting with (maybe...) and work
very FB.

But as you already know, these rcvr's are brutes
and I would not think of shipping them. If you
are located in the NYC area, maybe we could
talk...

Subject: WTB Globe Scout Knobs

I'm in great need!! I've got a good looking WRL Globe Scout 66. The only thing really wrong with it are the three small knobs. The knobs are not the correct ones. I think all the WRL Globe Scouts used the same 3 small knobs with an arrow on them. If anyone could help me out, I would greatly appreciate it.
As a side note, I had a Globe Scout 40A as a kid with the round meter. My Globe Scout 66 has a plastic square meter. If any kind sole could come up with a Globe Scout 40A or at least one with a round meter, I would love to add it to my original station's collection. Please contact me if anyone could help.

Matt,

I don't have the manual, but here is some info from my "master card file"
that might be of interest to you... or someone else...

manual for SRR-13A is NAVSHIPS 92211
manual for SRR-13 is NAVSHIPS 91875A

unit works from 2 to 32 Mc (MHz) on cw, am and fsk
includes receiver R-441A
115VAC input
includes crystal calibrator
uses sub-miniature type tubes
important to have cabinet, as external connections are difficult otherwise
100 pounds
originally cost govt. $2400 each (in 1950s $$$)
in Oct. 1974 Edsall Surplus sold them for $175, with manual.

From: Lee Bahr

Subject: WTB WRL Globe Scout

I was trying to refurbish one and now maybe two WRL Globe Scouts. The quest is growing and too lengthy to explain. I had a model 40A as a kid and can get one needing silk screening now from another ham. I have a model 66 and it is missing the 3 small knobs and also needs silk screening. I maybe can buy a clunker model 65 with burned up meter, front panel holes with rusty cabinet. I'm not sure about a reasonable price on this one. I'd like to get a 40A going as it was my original rig when I bought one new as a kid in 1954. I'd like to get the correct knobs on my model 66.
Does anyone have a Globe Scout that would get me to where I want to be? I can handle restoration and repair, if I can get the needed parts.
Thanks for your interest.

1178. FS Hallicrafters 8R40 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-28 00:00:00 UTC
From: n6kb@fix.net
Message-ID: <goz65.7$5d2.4536@news.callamer.com>
Source record: 64662

I have a Hallicrafters 8R40 Receiver for sale. I am unfamiliar with this kind of a model number for a hallicrafters. This model number is on a paper sticker inside the hinged top cover. There is no model name such as "Sky something" or number such as "SX something" on the front panel. The receiver is in fair to good condition and it works. It has octal tubes, all metal except for 5Y3 rectifier. So it is pre miniature tube era. The BFO "Pitch Control" know is missing, both Main and bandspread knobs probably had a chrome plated metal insert, which are missing, to match the ones on the other knobs. The main tuning knob has a chipped corner. There is a round indent over the speaker where a "h" logo is missing. Maybe this would have had the expected SX-?? number on it too. I had intended to restore it myself, and cannot find the time. I think it is worth around $100.00. Because of the condition which is good but not excellent I prefer to sell it only to somebody who actually checks it out for him or herself first. I don't really want to pack it up and ship it either, unless somebody is really sure that they want to buy it sight unseen. I am in San Luis Obispo, CA. If interested e-mail n6kb@juno.com and we'll go from there.

1179. Re: FS Hallicrafters 8R40 Receiver

I forgot to say in the original posting that the 8R40 receiver has 4 bands covering 550 KHz-1600KHz, 1.6-5.5MHz, 5.5-16MHz,16-44MHz and like most of these old receivers it is so deaf on the top band it is hard to tell that it is really working.

Hi Guys. New guy here.

My "Elmer" has bestowed upon me a very nice HW-100 Heathkit
transceiver and power supply. Unfortunately it lacks the 11 pin
"octal" style connecting cord between the power supply and the radio.

(One end's M and the other's F)

Looking for such a thing, or the parts to make one myself.

Please advise the newbie?

I'm looking for a Globe Scout in any mehanical condition to help restore the one I own, or buy one in good shape mechanically. Specifically, I need the small knobs above everything else. Electrical condition is of little factor. I would also like to acquire a Globe Scout 40A in good condition or restorable condition since I had one as a kid. The Globe Scout I am trying to restore is not a 40A.

1195. Re: FT-101 vs. TS-520?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-28 00:00:00 UTC
From: Mike Tatum <miket@cybatek.fsnet.co.uk>
Message-ID: <3959FAB4.2A77EBCD@cybatek.fsnet.co.uk>
Source record: 64742

Hi!

I've got both an FT101E and a TS520S.
I find the trio better when the bands are busy, the 101E seems to struggle with adjacent stations.
The TS520S is better than the FT101E on 40m, on 40m the 101E suffers with break through from the commercial broadcast
stations above 7.1mhz. The only way to use the 101E on 40m is with the attenuator in.

The TS520S appears to receive better on the higher bands, 12m and upwards.
The TS520S feels more "refined" to use over the FT101E, but at the end of the day I love them both!

Hope this helps ...

Cheers!

I have for sale Svetlana 4cx800a & 4cx400a nos tubes. These are new tubes. They have never been used. These tubes were made to the rigid specs of the Russian military. They are very heavy duty tubes. The are every bit as good as any tube offered for sale anywhere! Including the tubes offered for sale by the large commercial tube distributors. The price on the 4cx800a is $200.00 plus shipping for a matched pair and $110.00 for a single. The 4cx400a tubes are $90.00 each plus shipping. You can learn more and see my references at my web site. http://msnhomepages.talkcity.com/ClassifiedsCt/tomstubes/ Thanks for your time.

I have a CAY-46076 Meduim Frequency Receiver. It covers 200 Kc to 2000 Kc in four bands. Accepted by the U.S.Navy in 1943. It's in really good condition. It will not drive a speaker, probably supposed to feed an external AF PA. It drive headphones well. I also have a homebrew power supply for it which works, and has a lot of hum. You would probably want to improve the filtering or use another power supply. I figure it's worth about $80.00 if interested e-mail n6kb@juno.com Pickup would be simpler than shipping, I'm in San Luis Obispo.

Source record: 64676

In Austin, Texas-
Some goodies free for whomever will call and tell me
they will come and get them.
Please save these from the dump:

Chassis from a Johnson Ranger I with power
transformers, some switches etc. No mod transformer.
No face plate- just the chassis.

Lots of good iron- plate transformers, filament transformers,
big audio chokes for a Heising, nice big AM type chokes,
a 1920s Thordarson plate transformer.

First one to call and say they will come get them, gets them.
Please- call only if you're serious as I will be telling
the others after you that they're gone.
Sorry- I *cannot* take the time to pack and ship.

(512)989-1599
9AM to 9PM, please.

1218. HRO DECALS and PARTS

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-06-29 00:00:00 UTC
From: Robin Birch <robin.birch@postoffice.co.uk>
Message-ID: <962277004.548533@igateway.postoffice.co.uk>
Source record: 64678

Dear All,
I've just aquired an HRO which is in poor external condition. Under the lid, at the back, there is evidence of a decal being applied at some time. This is about 15 mm by 20 to 25 mm. Can anyone tell me what it should be and whether anyone makes replacements.

This is a "non miltary" HRO with UX6 bases, the original model as far as I can tell. It was originally finished in black crinkle finish with a grey chassis. As someone has repainted it in a fairly careless manner I am probably goign to have to repaint the case and panel.

I would also appreciate any information about any other markings that should be on the front panel around the switches and so on.

It has its original makers name plate but it is very tarnished and a good condition replacement would also be nice if anyone can supply such a thing.

Regards

Robin

From: n6kb@fix.net (Ken Brown)
Subject: FS Hallicrafters 8R40 Receiver

I forgot to say in the original posting that the 8R40 receiver has 4 bands covering 550 KHz-1600KHz, 1.6-5.5MHz, 5.5-16MHz,16-44MHz and like most of these old receivers it is so deaf on the top band it is hard to tell that it is really working.

Date: Wed, 28 Jun 2000 12:43:28 GMT
From: n6kb@fix.net (Ken Brown)
Subject: FS Hallicrafters 8R40 Receiver

I have a Hallicrafters 8R40 Receiver for sale. I am unfamiliar with this kind of a model number for a hallicrafters. This model number is on a paper sticker inside the hinged top cover. There is no model name such as "Sky something" or number such as "SX something" on the front panel. The receiver is in fair to good condition and it works. It has octal tubes, all metal except for 5Y3 rectifier. So it is pre miniature tube era. The BFO "Pitch Control" know is missing, both Main and bandspread knobs probably had a chrome plated metal insert, which are missing, to match the ones on the other knobs. The main tuning knob has a chipped corner. There is a round indent over the speaker where a "h" logo is missing. Maybe this would have had the expected SX-?? number on it too. I had intended to restore it myself, and cannot find the time. I think it is worth around $100.00. Because of the condition which is good but not excellent I prefer to sell it only to somebody who actually checks it out for him or herself first. I don't really want to pack it up and ship it either, unless somebody is really sure that they want to buy it sight unseen. I am in San Luis Obispo, CA. If interested e-mail n6kb@juno.com and we'll go from there.

From: Mike Tatum <miket@cybatek.fsnet.co.uk>
Subject: FT-101 vs. TS-520?

Hi!

I've got both an FT101E and a TS520S.
I find the trio better when the bands are busy, the 101E seems to struggle
with adjacent stations.
The TS520S is better than the FT101E on 40m, on 40m the 101E suffers with
break through from the commercial broadcast
stations above 7.1mhz. The only way to use the 101E on 40m is with the
attenuator in.

The TS520S appears to receive better on the higher bands, 12m and upwards.
The TS520S feels more "refined" to use over the FT101E, but at the end of the
day I love them both!

Hope this helps ...

Cheers!

MikeT ...

Subject: FT-1 Filter wanted

If your friend is interested I have an "Operating Manual" and a
"Technical Manual" available if he is interested. The Tech Man. is
new/unused.

Subject: Help: handbook for Redifon R50M

This is a nearly 50 kg BA from the early fifties and a nice receiver.
The valves are EF39x2, ECH35, 6J5, EF39x3, EB34, EB34, EF37, EF37,
6V6, 5Z4, S130 (stabiliser)
I've had it for 25 years, but mostly stored away. Now I want to
restore it, but the handbook is in a very bad condition and hardly
readable. Can anyone help me with a good copy?

Regards,

Arnold Goks&#65533;yr

From: "Robin Birch" <robin.birch@postoffice.co.uk>
Subject: HRO DECALS and PARTS

Dear All,
I've just aquired an HRO which is in poor external condition. Under the
lid, at the back, there is evidence of a decal being applied at some time.
This is about 15 mm by 20 to 25 mm. Can anyone tell me what it should be
and whether anyone makes replacements.

This is a "non miltary" HRO with UX6 bases, the original model as far as I
can tell. It was originally finished in black crinkle finish with a grey
chassis. As someone has repainted it in a fairly careless manner I am
probably goign to have to repaint the case and panel.

I would also appreciate any information about any other markings that should
be on the front panel around the switches and so on.

It has its original makers name plate but it is very tarnished and a good
condition replacement would also be nice if anyone can supply such a thing.

Regards

Robin

From: Skip Tyson <skipt1@ix.netcom.com>
Subject: Need National knob

National main tunining or band switch knob. It is a approx. 2-3/8 inches in diameter and fluted on the edge. I am restoring a WW2 RAO receiver but it looks like National used this knob on a several models ie. NC-100xa, NC-45, NC-200 and probably many more. I found this this bit of history thrown out on the street on yard clean up day. It had a bad power transformer and had been partially junked out. It is turning into real project! Thank you for taking the time to read this.

I have an Apache which I have taken the scratch out. Possibly you could mention where the RF choke is and I might be able to help. I have the manual as well, so finding it would not be difficult. The best mod for the Apache is to undo the low frequency blocks, both in blocking capacitors and the high-pass filter, in the modulation sectiion. I have those mods if you need them, but let's try for the dangling RF choke, first.

Hi Mate,

Would be a shame to strip it for parts as it has so few that would apply to Audio Stuff. Is the dynamotor still in the unit? Where are you and do you have any idea as to what your valuation is?

Tnx.

Bob, KE6F

PS I'd guess around 30-50 bucks if fairly complete with case and no mechanical parts broken.

My Ranger I has an intermittent problem lately. Sometimes it won't xmit when keyed -- until I tap on or move the VFO knob very slightly. Tapping the knob (not the dial face or the cabinet) seems to turn the oscillator on and off.

Some of the guys on the local 75 meter net advise me to check the 6AU6 in the oscillator compartment, check the screen resistor, and tighten the variable capacitor's hardware.

Which I plan to do as soon as the WX cools down here a bit. Any other suggestions will be appreciated.

For sale:

(QTY of 2) Heathkit SB614 Station Monitors with copy of manual. Both stations are in excellent condition but perhaps rated good due to minor scratches here and there on the cabinets. The front bezels are excellent. Both stations display a horz. sweep and appear to be working.

One Heathkit SB634 station console with original manual. Station is in excellent condition except for one element is out on a digit in the counter display.

One Heathkit SB644 VFO in excellent condition and Includes the original manual. Also includes all required cables to connect to SB104/104A transceiver.

All above items are $95 each plus shipping.

Looking for a Globe Scout to help restore two present projects. Mainly need three small knobs for one transmitter (model 66). Both my front panels will need silk screening unless I can find good looking originals (model 66 and model 40A).. Anyone have any Globe Scout stuff? One rig needs it's cabinet dent removed, so it could use another cabinet unless I find one with no dent. I keep finding rigs that are restorable, but I need parts to restore them. I'm getting real serious about re-silk screening the existing panels.

I'm getting back into Heathkit after an absence of some 32 years.
My intention was to find a kit to build like I did when I was 16. Well
I found an unbuilt HO-10 monitor scope on eBAY. Actually I won the
auction for it. Will cost me a small fortune however. Is it a travesty
of Heathkit justice to build an unbuilt kit? My wife simply is tired of
me stacking things in the closet! I just cannot see keeping one of
these unbuilt kits in the closet. Should I let it go to somebody that
is simply a collector of unbuilt kits. I'm new to all of this. Input
please! Thanks. Jim

To: sddxc@egroups.com
Cc: jqg@yahoo.com
Subject: [sddxc] SB 1714 California PRB-1, your support is needed

There is a bill now in Committee in the California Legislature SB 1714 which at first was an attempt to have PRB-1 limited federal preemption codified in the California Government Code. A well organized opposition has stripped the language which would have precluded a city of County zoning regulation form regulating ham radio antenna below 75 feet.

Those opposing the bill are well organized, It is critical to the eventual passage of a ham radio friendly statute for the voice of all amateur radio operators, and their supporters, such as those agencies and groups which benefit ad support amateur emergency communications to write, E-mail and call their Assemblyperson to support the passage of SB 1714.

There are at least two ways to find out who your assemblymember and what there address is:

1. Look in the government pages of your local telephone book. There you will find the local office of the assemblymember. Call the local office, and ask for the assemblymember's Sacramento office address.

2. Look at the web page http://www.assembly.ca.gov, and follow the "Find My District" link on the left side of the page. It will ask you for your street address, and return the name and contact information for your assemblymember.

Brad Wyatt, retired ARRL Pacific Division Director, wrote a letter to his assemblymember and the Local government Committee, which ARRL Volunteer Counsel K6HS has modified slightly to make "generic" and which is a good example of what you might say to your assemblymember. In writing your letter, put it in your own words to the extent possible. Otherwise, use parts of it or just copy it.

Be sure to send a copy of your letter to the:

Assembly Local Government Committee
1020 N Street, Room 157

Sacramento, CA 95814.

Here is the letter:

****

Dear Assemblymember <your member>

Senate bill SB-1714 has passed the State Senate, and is now before the Assembly Local Government Committee.

I support this bill and am asking you to support and co-sponsor the bill. Antennas and towers are key to successful communications for the 103,000 Amateur Radio operators in the State of California who are proficiency tested and licensed by the Federal Communications Commission.

As you may know, some cities, towns, and counties have developed land use standards which are so restrictive as to literally prohibit Amateur Radio communication. This bill would be consistent with and complement FCC Regulations, Part 97.15, in requiring municipalities to accommodate Amateur Radio.

The importance of Amateur Radio to California and the rest of the country is expressed well in the FCC rules:

§97.1 Basis and purpose.

The rules and regulations in this Part are designed to provide an amateur radio service having a fundamental purpose as expressed in the following principles:

(a) Recognition and enhancement of the value of the amateur service to the public as a voluntary noncommercial communication service, particularly with respect to providing emergency communications.

(b) Continuation and extension of the amateur's proven ability to contribute to the advancement of the radio art.

(c) Encouragement and improvement of the amateur service through rules which provide for advancing skills in both the communications and technical phases of the art.

(d) Expansion of the existing reservoir within the amateur radio service of trained operators, technicians, and electronics experts.

(e) Continuation and extension of the amateur's unique ability to enhance international goodwill.

These objectives cannot be achieved if Amateurs are precluded from pursuing their avocation at home by local actions which impose significant application fees and restrictions which do not, as the federal regulations require, reasonably accommodate the Amateur Radio service.

Please support the enactment of SB-1714.

Very truly yours,

<your name>

If it were a Heath transceiver or amplifier, it would be worth an
awful lot, unbuilt, but a monitor scope -- it's hard to say what that
will be worth, speculative-wise. I'd say if you like building kits,
just build the darn thing.

Subject: 4cx800a & 4cx400a tubes

I have for sale Svetlana 4cx800a & 4cx400a nos tubes. These are new
tubes. They have never been used. These tubes were made to the rigid
specs of the Russian military. They are very heavy duty tubes. The are
every bit as good as any tube offered for sale anywhere! Including the
tubes offered for sale by the large commercial tube distributors. The
price on the 4cx800a is $200.00 plus shipping for a matched pair and

$110.00 for a single. The 4cx400a tubes are $90.00 each plus shipping.
You can learn more and see my references at my web site.

Subject: Apache

I have an Apache which I have taken the scratch out. Possibly you could
mention where the RF choke is and I might be able to help. I have the manual
as well, so finding it would not be difficult. The best mod for the Apache is
to undo the low frequency blocks, both in blocking capacitors and the
high-pass filter, in the modulation sectiion. I have those mods if you need
them, but let's try for the dangling RF choke, first.

Subject: FS: FT-101E with AM filter

FS: FT-101E with optional AM filter and all optional crystals including
11-meter crystals. Electrically excellent with full output and
excellent SSB/AM audio. Cosmetically good with factory plastic still on
front face but some minor scratches on the cabinet. Complete with
original manuals, mic and cords. Asking $250 + shipping.

It would appear that there is a need for information on the SX-71! I
invite anyone who would like a copy of the manual to download it for
free from the BoatAnchor Manual Archive at http://bama.sbc.edu

Go back to the BAMA site. Click on FREE VIEWERS. Your browser in
useless for this purpose. You need a viewer/printer to handle the
files. There is a lot of good information also under the "New Users"
link from the BAMA home page.

From: David Black <dblack4@earthlink.net>
Subject: FS: Heathkit SB614, SB634 & SB644

For sale:

(QTY of 2) Heathkit SB614 Station Monitors with copy of manual. Both
stations are in excellent condition but perhaps rated good due to minor
scratches here and there on the cabinets. The front bezels are excellent.
Both stations display a horz. sweep and appear to be working.

One Heathkit SB634 station console with original manual. Station is in
excellent condition except for one element is out on a digit in the
counter display.

One Heathkit SB644 VFO in excellent condition and Includes the original
manual. Also includes all required cables to connect to SB104/104A
transceiver.

All above items are $95 each plus shipping.

Subject: Ranger Clinic

My Ranger I has an intermittent problem lately. Sometimes it won't xmit when
keyed -- until I tap on or move the VFO knob very slightly. Tapping the knob
(not the dial face or the cabinet) seems to turn the oscillator on and off.

Some of the guys on the local 75 meter net advise me to check the 6AU6 in the
oscillator compartment, check the screen resistor, and tighten the variable

capacitor's hardware.

Which I plan to do as soon as the WX cools down here a bit. Any other suggestions will be appreciated.

Subject: Unbuilt Heathkit Question

I'm getting back into Heathkit after an absence of some 32 years. My intention was to find a kit to build like I did when I was 16. Well I found an unbuilt HO-10 monitor scope on eBAY. Actually I won the auction for it. Will cost me a small fortune however. Is it a travesty of Heathkit justice to build an unbuilt kit? My wife simply is tired of me stacking things in the closet! I just cannot see keeping one of these unbuilt kits in the closet. Should I let it go to somebody that is simply a collector of unbuilt kits. I'm new to all of this. Input please! Thanks. Jim

Source record: 64618

There were 10 other guys bidding on the unbuilt HO-10. I won the final bid at $736. Before you guys tell me that I am out of my mind you have to remember that as a general dentist I just paid out god knows how much money to the laboratories that I use and I figured that I would get myself a toy that I have not had in years since I'm paying everybody else; dental hygienists here in San Diego with 2 years of junior college make at least 40 dollars/hr. due to law of supply and demand. Anyway that is my excuse; no I'm not a wealthy collector. I just figured that I wanted to build a Healthkit like I did when I was 15 in 1967. It is obvious however that getting into this aspect of the hobby would be a major financial endeavor that frankly I cannot continue. I'm getting e-mails now from guys that appear to be major collectors that really want this unbuilt unit. I don't know what to do. My wife has a fit when she starts to see the closet start to fill up with collector type stuff. Advice? Jim

Yep, if the wife is having fits -- FYI, you can rent an
air-conditioned storage space for $60 or $70 a month that'll hold a
whole of gear your wife doesn't really need to know about... :-)

Just bring home what you want -- keep the other stuff in storage.
She'll think you're a reformed guy.

Gee, I sold two of them together on Ebay- with manuals for under $50.
Heck, you could have bought those, taken them apart and started
over! :-) You would not only have regained that old experience but
also learn good de-soldering techniques.

I have an old RT-18/arc-1 transcever I bought in 1967 I have never hooked it up in all these years. It has all its tubes and requires an external power supply. Do any of you have an idea what its worth? Is it of some value or should I strip it for tube audio projects?

Cheers
Eric

I have in good condition two 212Z-1 Remote Amplifiers. These are solid state, 4 Channel AC or Battery operated portables in cases for on the spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent for AM Transmitters requiring line level audio input. Built in 400Hz tone for setups and program monitor for headphones. All XLR inputs and also telephone connections. With a really large VU Meter in the center makes it a real great addition to any station. $395 each plus shipping.

Just picked up a unique receiver of sorts. Its a Decca DAL 222 Marine receiver. Dual Automatic Loran. It has a built in scope, two digital displays (the red tube types), a bottom panel for adjusting the scope and selecting which display. This one is setup to operate on 12v to 48v DC. It is in perfect condition inside and out. Has a serial plug for a remote on the back. Its approx. 7 inches high, 16 wide and 18" deep. Back panal reads: ITT Decca Marine, Automatic Loran A Receiver.

Can anyone tell me anything about this rig other than the above. What frequencies? How to operate. Setup and usage?

Would greatly appreciate it.

I have a Multi-Elmac PSR-612 Power Supply for the Elmac PMR-6/7/8.
It is in very good to great shape! This power supply could also be
used to power up some other piece of equipment that requires high
voltage. The input is 6 & 12 VDC, and the output would be high
voltage. I am not sure what the output is, I would assume something
like 175-250 Volts, 350 volts and 6 volts, and possible 700-900 volts.
It is currently going for a great price and there is NO reserve!

I can't help much but here's a little info about mine. Robin, the decal says "National Radio Company" has their logo "NC" and under that says "Malden, Mass". The decal is red and gold (at least, on my HRO - W).

On your name plate, just curious, what model do you have? It should say : type HRO - (letter designation). There are differences depending on the model. As I said, mine is a "W", military, made in March 1945. You should be able to find some pictures. I will send you a digital shot of the front of mine, bc. You can compare it with your front panel.

Richard Bauer wrote:

> What is an 89Y tube like.

Hello--
According to Ludwell Sibley's book "Tube Lore", the type 89 is a
triple-grid (pentode) tube
similar to the type 59; the three grids allow considerable flexibility.
You can connect
the grids to run the tube as a class-A triode (similar to a type 45), a
class-B tetrode
(similar to a type 46) or a class-A pentode (similar to a type 47).

The type 89 has a 6.3V, 400mA heater.

The 89-Y featured a Micanol (brown-colored, low RF loss) base.

This tube was commonly used in low-leval stages in pre-1940
transmitters, if
I correctly remember the circuits in older Radio Amateur's Handbooks.

For Sale,

Tempo One vintage HF transceiver and power supply.

Later model with black face.

Covers 80, 40, 20, 15 meters and the 28.5 to 29.0 part of the 10 meter band.

Requires optional crystals for complete 10 meter coverage.

Very good condition and fully working.

Output tubes are very strong and easily produce rated power.

Comes with original manual and power supply / speaker.

$180 US plus shipping.

Please reply to csc@smartt.com if interested.

Colin

Message-ID: <395e5c7d.823807826@news.erols.com>
Source record: 64501

Bruce: I agree with Dale: It is probably the capacitor in the power supply. I had the same symptoms on my 2-B. It was the cap.

Unless you're a real purist on these matters, I wouldn''t get hung up on finding a replacement capacitor of the specific combination used by the 2-B. I replaced my capacitor with 3 individual caps. Just take a look at the schematic and figure out how much capacitance you need at each point in the circuit. Of course, pay close attention to capacitor polarity and maximum voltage values. And of course, watch out for the high voltage. And remember that these caps can give you a big jolt even with the receiver unplugged. Be sure to short out the caps before working on them.

Good luck with the 2-B. Wonderful receiver. I'm listening to mine right now! Just worked Fiji and New Caledonia with it on 20 (with my trusty HT-37).

If you get the pre-built version, it's built like a tank and works great on all bands.

If you get the "kit", don't expect a Heathkit type assembly manual. And you'll be going hither and yon for more parts, too.

I bought it first as a kit, then decided it was more than I could handle. I sent it back and Lee assembled it for me at a reasonable charge. He did a great job, too.

I was pleased with it.

Source record: 64562

Not too much, but Loran A was a radio position determination system using a few channel frequencies in and near the Amateur 160 meter band. The two displays probably read out the "TD's" or time delays calculated from two different transmitters, transmitting on the same frequency. Calculations from triangulation of the two time delayed pulse groups would pinpoint one's position in one of two possible spots on the earth. Usually, one of the two positions could be ruled out by common sense (whatever that is), and the other would be your position. Charts were printed, to aid the navigator, overprinted with Loran A lines of position, anywhere on earth. Loran C (on a completely different frequency band) pretty much replaced Loran A in the 1970's (GPS is currently crowding out or making Loran C almost obsolete), and It is quite possible that there are no Loran A stations currently operating anywhere. Decca marine Loran gear was pretty high class stuff, and with a vivid imagination, experimental uses and modifications are unlimited. Schematics would be most helpful, Decca manuals were most comprehensive. I've seen what you need, in the dark and fading past, but unfortunately have lost touch with former repair stations which would probably be glad to unload the manuals to someone who could use them.

Would buy unit for parts, especially the knobs, or nice unit. I have two restorable Globe Scouts now, needing various work and parts. I would eventually like to get them looking better then their present condition. Any consideration would be appreciated.

Message-ID: <395DD0DB.C8BA06D8@erols.com>
Source record: 64566

The ARC-1 requires 28 VDC. The internal dynamotor provides the B+ voltage. I have, over the years, converted several to 2 meters (that is to say, built a power supply for 110VAC). The rig will operate from 100-156 MHz at about 20 watts out (at best). They use 8MHz crystals (FT-243 types, etc.). They will do AM, normally, but CW is not a problem. I still have the little, splined tuning tools for these babies. Good luck with yours...don't trash it, they're getting harder to find, especially if they're in nice condition!!!! 73 de Jeep/K3HVG

I have an old RT-18/arc-1 transcever I bought in 1967 I have
never hooked it up in all these years. It has all its tubes
and requires an external power supply. Do any of you have an
idea what its worth? Is it of some value or should I strip
it for tube audio projects?

Cheers
Eric

Date: Fri, 30 Jun 2000 21:54:25 -0700
From: "Bob"
Subject: arc-1

Hi Mate,

Would be a shame to strip it for parts as it has so few that would apply
to Audio Stuff. Is the dynamotor still in the unit? Where are you and do
you have any idea as to what your valuation is?

Tnx.

Bob, KE6F

PS I'd guess around 30-50 bucks if fairly complete with case and no
mechanical parts broken.

From: radiotek@pacbell.net (MAG Electronics)
Subject: CHEAP! FA: Multi-Elmac PSR-612 Power Supply for PMR-6/7/8

I have a Multi-Elmac PSR-612 Power Supply for the Elmac PMR-6/7/8. It is in very good to great shape! This power supply could also be used to power up some other piece of equipment that requires high voltage. The input is 6 & 12 VDC, and the output would be high voltage. I am not sure what the output is, I would assume something like 175-250 Volts, 350 volts and 6 volts, and possible 700-900 volts. It is currently going for a great price and there is NO reserve!

Subject: Collins 212Z-1 Remote Amplifiers for sale

I have in good condition two 212Z-1 Remote Amplifiers. These are solid state, 4 Channel AC or Battery operated portables in cases for on the spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent for AM Transmitters requiring line level audio input. Built in 400Hz tone for setups and program monitor for headphones. All XLR inputs and also telephone connections. With a really large VU Meter in the center makes it a real great addition to any station. $395 each plus shipping.

From: n6kb@fix.net (Ken Brown)
Subject: FS MF Receiver "A Unit of RBM-4 Radio Equipment"

I have a CAY-46076 Meduim Frequency Receiver. It covers 200 Kc to 2000
Kc in four bands. Accepted by the U.S.Navy in 1943. It's in really
good condition. It will not drive a speaker, probably supposed to feed
an external AF PA. It drive headphones well. I also have a homebrew
power supply for it which works, and has a lot of hum. You would
probably want to improve the filtering or use another power supply.
I figure it's worth about $80.00 if interested e-mail n6kb@juno.com
Pickup would be simpler than shipping, I'm in San Luis Obispo.

I can't help much but here's a little info about mine. Robin, the decal
says "National Radio Company" has their logo "NC" and under that says
"Malden, Mass". The decal is red and gold (at least, on my HRO - W).
>

On your name plate, just curious, what model do you have? It should say : type HRO - (letter designation). There are differences depending on the model. As I said, mine is a "W", military, made in March 1945. You should be able to find some pictures. I will send you a digital shot of the front of mine, bc. You can compare it with your front panel.

From: "canfield"
Subject: infor. needed: ITT Decca Marine receiver

Just picked up a unique receiver of sorts. Its a Decca DAL 222 Marine receiver. Dual Automatic Loran. It has a built in scope, two digital displays (the red tube types), a bottom panel for adjusting the scope and selecting which display. This one is setup to operate on 12v to 48v DC. It is in perfect condition inside and out. Has a serial plug for a remote on the back. Its approx. 7 inches high, 16 wide and 18" deep. Back panal reads: ITT Decca Marine, Automatic Loran A Receiver.

Can anyone tell me anything about this rig other than the above. What frequencies? How to operate. Setup and usage?

Would greatly appreciate it.

Bill KF4PGU

Date: Sat, 01 Jul 2000 05:48:09 GMT
From: "Lynn Coffelt"
Subject: infor. needed: ITT Decca Marine receiver

Not too much, but Loran A was a radio position determination system using a few channel frequencies in and near the Amateur 160 meter band. The two displays probably read out the "TD's" or time delays calculated from two different transmitters, transmitting on the same frequency. Calculations from triangulation of the two time delayed pulse groups would pinpoint one's position in one of two possible spots on the earth. Usually, one of the two positions could be ruled out by common sense (whatever that is), and the other would be your position. Charts were printed, to aid the navigator, overprinted with Loran A lines of position, anywhere on earth. Loran C (on a completely different frequency band) pretty much replaced Loran A in the 1970's (GPS is currently crowding out or making Loran C almost obsolete), and It is quite possible that there are no Loran A stations currently operating anywhere. Decca marine Loran gear was pretty high class stuff, and with a vivid imagination, experimental uses and modifications are unlimited. Schematics would be most helpful, Decca manuals were most comprehensive. I've seen what you need, in the dark and fading past, but unfortunately have lost touch with former repair stations which would probably be glad to unload the manuals to someone who could use them.

If you get the pre-built version, it's built like a tank and works great on all bands.

If you get the "kit", don't expect a Heathkit type assembly manual. And you'll be going hither and yon for more parts, too.

I bought it first as a kit, then decided it was more than I could handle. I sent it back and Lee assembled it for me at a reasonable charge. He did a great job, too.

I was pleased with it.

If it were a Heath transceiver or amplifier, it would be worth an awful lot, unbuilt, but a monitor scope -- it's hard to say what that will be worth, speculative-wise. I'd say if you like building kits, just build the darn thing.

From: Jim Hahn
Subject: Unbuilt Heathkit Question

There were 10 other guys bidding on the unbuilt HO-10. I won the final bid at $736. Before you guys tell me that I am out of my mind you have to remember that as a general dentist I just paid out god knows how much money to the laboratories that I use and I figured that I would get myself a toy that I have not had in years since I'm paying everybody else; dental hygienists here in San Diego with 2 years of junior college make at least 40 dollars/hr. due to law of supply and demand. Anyway that is my excuse; no I'm not a wealthy collector. I just figured that I wanted to build a Healthkit like I did when I was 15 in 1967. It is obvious however that getting into this aspect of the hobby would be a major financial endeavor that frankly I cannot continue. I'm getting e-mails now from guys that appear to be major collectors that really want this unbuilt unit. I don't know what to do. My wife has a fit when she starts to see the closet start to fill up with collector type stuff. Advice? Jim

Yep, if the wife is having fits -- FYI, you can rent an air-conditioned storage space for $60 or $70 a month that'll hold a whole of gear your wife doesn't really need to know about... :-)

Just bring home what you want -- keep the other stuff in storage. She'll think you're a reformed guy.

Gee, I sold two of them together on Ebay- with manuals for under $50.
Heck, you could have bought those, taken them apart and started
over! :-) You would not only have regained that old experience but
also learn good de-soldering techniques.

I've always had a problem with connecting lead wires to components that have been removed from printed wiring boards. It is very difficult to hide the seams :-)

Just got a Hallicrafters S-40A from a ham friend in Cal. It was DOA
(as advertised) And I haven't been into it yet. (current project
occupying the bench)

It has some mods, including a BNC connector on the back labled
"Q-Multiplier".

Was this some sort of external signal amp?

Please advise?

Have an HRO-500
It works.
Could probably use good going over as it has had nothing done
to it since new.
I'll have some photos up at http://www.edebris.com/HRO-500
by late this evening.
$1K includes shipping in 48 states.
Will ship worldwide for additional.
Consider swap involving Signal One CX7 or CX11 or Drake 4130.
Also have a Watkins Johnson, one of three manufactured, one of
one known to still exist, monitoring system. Asking $21K including
shipping (three pallets by motor freight in continental USA) but will
entertain offers over $11K plus ship. Will include at least one NOS
display for use with the DRD. Radios are unmolested, cases
have never been opened. Pinnacle of WJ analog stuff.
Photos are up at http://www.edebris.com/WJ-9049
Other interesting stuff.
Raytheon Diverse Adapter, diversity receiving adapter, unused with
original Raytheon tubes $55 incl postage
http://www.edebris.com/Raytheon-diversity-adapter
HT37/HT32B/HT33/SX101A $1K plus ship (one pallet by motor freight
from 30306)
http://www.edebris.com/Hallicrafters
One tube RX or RX preamp, not sure $65 plus ship
http://www.edebris.com/Glowbuggy-thing
Actually labelled RF Communications, not Harris RX $55 plus ship
http://www.edebris.com/Harris-RF-501
Stylish Western Electric military radio $75 plus ship (heavy)
works but filter cap need replacing as it gets very hot.
http://www.edebris.com/Western-Electric-chrome-push-button-radio
Camera. What you see is what you get, I do not know Cameras $30 plus
ship
http://www.edebris.com/petri-2.8-color-corrected-super
Sun SPARC 10 with redHat 6.1 server installed. 32meg, 1gig, SM30
$175 plus ship. Excellent for low usage www server or medium usage
DNS or mail server. Ship is from 30306, 28lbs.
http://www.edebris.com/SS10
Lots more to be listed as I am moving to KH6 land and spouse
has imposed a one ton limit on the radio stuff I can bring :-)
Unfortunately, test equipment and computer gear falls under this limit
as well.
Have at least 10 tons of stuff, arghhh!

Did get the DeLorean sold even though blender was missing.

The connector was, in all probability, for a Heath QF-1, Q-multiplier. Its a regen circuit that provides some IF selectivity and a notch filter. Actually, they worked pretty well, given the type of equipment they were used with. The connection is a tap off the IF chain. You don't have to connect it to the receiver if you don't want to, nor do you have to remove the wiring insamuch its a "parasite" type of connection. (not to confused with parasitic....hi!). B+ and fil were taken from the host receiver.

Source record: 64444

I have 2 Collins filters (S-line type), 2.1 kHz (F455 FA 21 7029) and 6.0 kHz (F455 FC 60 6941). I'm looking for CW filters for the Drake R4C (1.5 and 250), CW filters for the TR7. Also looking for filters for the FT-1000: XF-E, XF-F and an XF-455MC. Barring any trades, I'm open to offers for the pair. Tnx

1336. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-02 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8joe0h$5dc$1@news.hawaii.edu>
Source record: 64445
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any amateur topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and its
content drifts further and further away from being "on-topic" in the
various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman, KH6O

1337. FA EBAY RF STUFF for $1.00

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-02 00:00:00 UTC
From: Steve Fried <k2pts@home.com>
Message-ID: <395FBC7C.B49BE79A@home.com>
Source record: 64446

I tried before and the url did not work right., so here goes again.
http://cgi6.ebay.com/aw-cgi/eBayISAPI.dll?MfcISAPICommand=ViewListedItems&userid=telegraph1&include=0&since=30&sort=2&rows=200

If the above doesn't work again please check ebay for seller
telegraph1 and take a look at what I have for auction.
Most of the 24 items start at one dollar and have no reserve.

The stuff on ebay is all ham related so at least it is all interesting.
Certainly priced right at a buck.

Have a good fourth weekend.

Steve

1338. Jones Key iambic paddle MINT

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-02 00:00:00 UTC
From: w2zr@aol.com
Message-ID: <20000702182505.01220.00001208@ng-cc1.aol.com>
Source record: 64447

I have a Jones Key iambic paddle. This paddle has a very heavy metal base. It's much heavier than a Bencher. The base is painted red (original) and the rest of the paddle is brass. The two paddle arms each swing in a pair of roller bearings for extremely smooth action. The paddle is in excellent condition, virtually without a flaw. I'm the original owner and have only used it a few times. I'll bubble wrap it and ship it for $150.

73,
Steve W2ZR

1339. FA: Keypad for Collins KWM-380

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-02 00:00:00 UTC
From: jbr101@my-deja.com
Message-ID: <8joj2t$f7b$1@nnrp1.deja.com>
Source record: 64448
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

I have a keypad for the Collins KWM-380 for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=372565399

and the description is

This is a near mint-condition keypad for the Collins KWM-380 HF transceiver.When used with the interface board in your radio, enables direct frequency entry from the keypad, storage of displayed frequency into one of 10 memories, recall of frequencies stored in memory, and "stepping through the frequencies stored in memory. The stepping feature is especially nice for contesting. This is a heavy metal brute, weighs around two pounds and is mounted on a rubber slab so it stays put on your operating table. Comes with documentation, cable and connector all ready to plug into your '380 and go. This is in like-new condition, owned by a non-smoker who rarely used it. I honestly don't think you could tell it from new. The last time I saw a KWM-380 keypad advertised retail it was close to $300, starting bid is about 1/6 of that; I don't even know if they're still available anywhere else but right here on good ol' eBay.

Closes 7/09/00.

Thank-you

Sent via Deja.com http://www.deja.com/
Before you buy.

Looking for a World Radio Labs (WRL) Globe Scout for parts, to repair,or to add to my collection. Right now I need knobs for a modell 66, paint on the 40A and the 66, new silk screening on all the front panels. So right now, I would be interested in most anything from a super junker to nice transmitter. Thanks for your consideration.

RCA ACR111 general coverage receiver from 1937 in very good condition; covers broadcast and shortwaves. It has 16 tubes, crystal filter, b.f.o., etc. This radio was reconditioned about 5 years ago (caps tubes, dial drive belt, etc.) and is working well. The tubes were checked recently. The only thing it needs is that some of the numbers on the dial should be repainted. Ask me for a picture! $250 plus s & h from Schenectady, NY

A friend of mine is in need of a source for an R-508 manual. I believe this
is an old military receiver made by RCA. He would like to find the TM
(technical manual) for this radio. Is it available anywhere on the web???

Thanks in advance,
Walter Wilson

Try http://sva.theriver.com/millist/m17.html Scroll down to R-508. Yhere
are other receivers that are similar.

Hope this helps...

Subject: S-40A Hally/Q-multiplier

Just got a Hallicrafters S-40A from a ham friend in Cal. It was DOA
(as advertised) And I haven't been into it yet. (current project
occupying the bench)

It has some mods, including a BNC connector on the back labled
"Q-Multiplier".

Was this some sort of external signal amp?

Please advise?

Subject: S-40A Hally/Q-multiplier

The connector was, in all probability, for a Heath QF-1, Q-multiplier. Its a
regen circuit that provides some IF selectivity and a notch filter. Actually,
they worked pretty well, given the type of equipment they were used with. The
connection is a tap off the IF chain. You don't have to connect it to the
receiver if you don't want to, nor do you have to remove the wiring insamuch its

a "parasite" type of connection. (not to confused with parasitic....hi!). B+
and fil were taken from the host receiver.

From: Brad Thompson
Subject: tubes

Richard Bauer wrote:

> What is an 89Y tube like.

Hello--
According to Ludwell Sibley's book "Tube Lore", the type 89 is a triple-grid (pentode) tube
similar to the type 59; the three grids allow considerable flexibility. You can connect
the grids to run the tube as a class-A triode (similar to a type 45), a class-B tetrode
(similar to a type 46) or a class-A pentode (similar to a type 47).

The type 89 has a 6.3V, 400mA heater.

The 89-Y featured a Micanol (brown-colored, low RF loss) base.

This tube was commonly used in low-leval stages in pre-1940 transmitters, if
I correctly remember the circuits in older Radio Amateur's Handbooks.

From: Bob
Subject: WTS: HRO-500. Working. $1k incl USA shipping. WJ-9049 system $21k incl shipping.
plus some other debris

Have an HRO-500
It works.
Could probably use good going over as it has had nothing done
to it since new.
I'll have some photos up at http://www.edebris.com/HRO-500
by late this evening.
$1K includes shipping in 48 states.
Will ship worldwide for additional.
Consider swap involving Signal One CX7 or CX11 or Drake 4130.
Also have a Watkins Johnson, one of three manufactured, one of
one known to still exist, monitoring system. Asking $21K including
shipping (three pallets by motor freight in continental USA) but will
entertain offers over $11K plus ship. Will include at least one NOS
display for use with the DRD. Radios are unmolested, cases
have never been opened. Pinnacle of WJ analog stuff.
Photos are up at http://www.edebris.com/WJ-9049
Other interesting stuff.
Raytheon Diverse Adapter, diversity receiving adapter, unused with
original Raytheon tubes $55 incl postage
http://www.edebris.com/Raytheon-diversity-adapter
HT37/HT32B/HT33/SX101A $1K plus ship (one pallet by motor freight
from 30306)
http://www.edebris.com/Hallicrafters
One tube RX or RX preamp, not sure $65 plus ship
http://www.edebris.com/Glowbuggy-thing
Actually labelled RF Communications, not Harris RX $55 plus ship
http://www.edebris.com/Harris-RF-501
Stylish Western Electric military radio $75 plus ship (heavy)
works but filter cap need replacing as it gets very hot.
http://www.edebris.com/Western-Electric-chrome-push-button-radio
Camera. What you see is what you get, I do not know Cameras $30 plus
ship
http://www.edebris.com/petri-2.8-color-corrected-super
Sun SPARC 10 with redHat 6.1 server installed. 32meg, 1gig, SM30
$175 plus ship. Excellent for low usage www server or medium usage
DNS or mail server. Ship is from 30306, 28lbs.
http://www.edebris.com/SS10
Lots more to be listed as I am moving to KH6 land and spouse
has imposed a one ton limit on the radio stuff I can bring :-)
Unfortunately, test equipment and computer gear falls under this limit
as well.
Have at least 10 tons of stuff, arghhh!
Did get the DeLorean sold even though blender was missing.

Message-ID: <8gJ75.232$SH.4552@skycache.prestige.net>
Source record: 64535

We're unloading everything around here marked ARN-6 -

We have a complete system that we built consisting of -

R-101A receiver, a NOS single-control MT-274/A receiver mounting tray, C-179A control box complete with the impossible to find MT-275 control backplate, ID-91B indicator and AS-313 antenna. This system also includes all brand new Amphenol connectors for the components and is wired with aircraft wire to keep the system as authentic as possible.

Plus, we have the following additional items -

MT-274 receiver mount

Qty 5 - Receivers (r101,r101a and r101b)
Qty 1 - AS-313 antenna
Qty 1 - CU-65A sense antenna insulator (brand new, impossible to get)
Qty 2 - Dzus mounted control heads (1 needs cleaning, 1 brand new)
Qty 2 - C-149 control boxes (1 needs work)
Qty 2 - ID-91/B indicators
original service manuals
spline cables, angle adapters and weird arn-6 spline stuff

Someone please buy all of this to save it from the dumpster. My wife has tripped over 1 receiver to many.

We will not sell individual items, so don't ask. All or nothing purchase only.

We don't really have a price in mind, so all offers will be considered and should be sent to -

jtburnham@hotmail.com

UPS shipping should not be to bad, total weight would be a couple of hundred pounds.

Payment by check, money order or through PayPal.

Thanks

Jim Burnham
jtburnham@hotmail.com

From: "Jim Burnham" <jtburnham@hotmail.com>
Subject: ARN-6 sale!

We're unloading everything around here marked ARN-6 -

We have a complete system that we built consisting of -

R-101A receiver, a NOS single-control MT-274/A receiver mounting tray, C-179A control box complete with the impossible to find MT-275 control backplate, ID-91B indicator and AS-313 antenna. This system also includes all brand new Amphenol connectors for the components and is wired with aircraft wire to keep the system as authentic as possible.

Plus, we have the following additional items -

MT-274 receiver mount

Qty 5 - Receivers (r101,r101a and r101b)
Qty 1 - AS-313 antenna
Qty 1 - CU-65A sense antenna insulator (brand new, impossible to get)
Qty 2 - Dzus mounted control heads (1 needs cleaning, 1 brand new)
Qty 2 - C-149 control boxes (1 needs work)
Qty 2 - ID-91/B indicators
original service manuals
spline cables, angle adapters and weird arn-6 spline stuff

Someone please buy all of this to save it from the dumpster. My wife has tripped over 1 receiver to many.

We will not sell individual items, so don't ask. All or nothing purchase only.

We don't really have a price in mind, so all offers will be considered and should be sent to -

jtburnham@hotmail.com

UPS shipping should not be to bad, total weight would be a couple of hundred pounds.

Payment by check, money order or through PayPal.

Thanks

Jim Burnham

From: jbr101@my-deja.com
Subject: FA: Keypad for Collins KWM-380

I have a keypad for the Collins KWM-380 for auction on eBay.

The URL is

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=372565399

and the description is

This is a near mint-condition keypad for the Collins KWM-380 HF
transceiver.When used with the interface board in your radio, enables
direct frequency entry from the keypad, storage of displayed frequency
into one of 10 memories, recall of frequencies stored in memory, and
"stepping through the frequencies stored in memory. The stepping
feature is especially nice for contesting. This is a heavy metal brute,
weighs around two pounds and is mounted on a rubber slab so it stays put
on your operating table. Comes with documentation, cable and connector
all ready to plug into your '380 and go. This is in like-new
condition, owned by a non-smoker who rarely used it. I honestly don't
think you could tell it from new. The last time I saw a KWM-380 keypad
advertised retail it was close to $300, starting bid is about 1/6 of
that; I don't even know if they're still available anywhere else but
right here on good ol' eBay.

Closes 7/09/00.

Thank-you

Subject: FA EBAY RF STUFF for $1.00

I tried before and the url did not work right., so here goes again.
http://cgi6.ebay.com/aw-cgi/eBayISAPI.dll?MfcISAPICommand=ViewListedItems&userid=telegraph
1&include=0&since=30&sort=2&rows=200

If the above doesn't work again please check ebay for seller
telegraph1 and take a look at what I have for auction.

Most of the 24 items start at one dollar and have no reserve.

The stuff on ebay is all ham related so at least it is all interesting.
Certainly priced right at a buck.

Have a good fourth weekend.

From: n2cqr@erols.com (Bill Meara)
Subject: Help for Drake 2B

Bruce: I agree with Dale: It is probably the capacitor in the power supply. I had the same symptoms on my 2-B. It was the cap.

Unless you're a real purist on these matters, I wouldn''t get hung up on finding a replacement capacitor of the specific combination used by the 2-B. I replaced my capacitor with 3 individual caps. Just take a look at the schematic and figure out how much capacitance you need at each point in the circuit. Of course, pay close attention to capacitor polarity and maximum voltage values. And of course, watch out for the high voltage. And remember that these caps can give you a big jolt even with the receiver unplugged. Be sure to short out the caps before working on them.

Good luck with the 2-B. Wonderful receiver. I'm listening to mine right now! Just worked Fiji and New Caledonia with it on 20 (with my trusty HT-37).

Sounds like typical filter capacitor I pulled the "can" out of mine and replaced it with one of equal value but slightly different physical size.
Still an excellent receiver.

Subject: Jones Key iambic paddle MINT

I have a Jones Key iambic paddle. This paddle has a very heavy metal base.
It's much heavier than a Bencher. The base is painted red (original) and the
rest of the paddle is brass. The two paddle arms each swing in a pair of
roller bearings for extremely smooth action. The paddle is in excellent
condition, virtually without a flaw. I'm the original owner and have only used
it a few times. I'll bubble wrap it and ship it for $150.

Date: 2 Jul 2000 21:59:45 GMT
From: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Subject: List of the rec.radio newsgroups

Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate audience, below is a list of the rec.radio newsgroups. In most cases, a group's name will explain its purpose. Cross-posting should rarely be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any amateur topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-running thread results from a single cross-posted article, and its content drifts further and further away from being "on-topic" in the various NGs which receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups" posted on the 15th of each month.

Jeffrey Herman, KH6O

Subject: Photos of my HRO-500 up at http://www.edebris.com/HRO-500/

Moving to KH-6 and spousal orders are to
reduce toys to 1 ton total.

National HRO-500 for sale.
http://www.edebris.com/HRO-500/
Receives fine. Has not been touched cosmetically
or electrically since new. I'll leave that to
purchaser.
$1k includes shipping in 48 states.

From: mccrk@aol.com (MCCRK)
Subject: WTB: B&W Parts

I have a B&W 5100-B on which the function switch (CW-VFO-AM) has developed some
play, probably a sign it's wearing out. If anyone is parting out a 5100-B, I'm
looking for a replacement for SW-501. It's a 3-wafer, 9-pole, 3-position
ceramic switch. I could probably use some other parts, if anyone has them
available. <any thanks.

Most of the AM activity is between 29.0 and 29.1 mhz. I often
call CQ on 29.020 MHZ. Hope to hear you on!

From: jtyburczy@aol.com (JTyburczy)
Subject: 10M AM Calling Frequency??

I've heard 29.000 used as the calling freq. with working freqs up to 29.200 but
most activity in the first 100 khz.

Too bad the band has not opened a lot recently.

Try the following. Great web site for the 19 set. It shows what's for sale
and what is needed. Also notes the 2 WS 19 nets, times and frequencies.

Say Bill,

Whats going on with your return address? I can't seem to email you back...

Date: Thu, 22 Jun 2000 22:11:36 -0400
From: Brad Thompson
Subject: 7984s, back issues Ham Radio mag, anyobe?

Hello--

Can anyone use a batch of 7984 tubes? Two NOS/boxed (1 GE, 1 Dumont)
and five unboxed/pulls (all have shiny getters-- one looks a little
pale).
$12.00 buys the batch of seven, plus $4.00 priority mail postage (U.S.).

The following magazines are available-- all are in G+ to VG condition
(contents intact, but obviously read and appreciated) except as noted:

Ham Radio; $1.00 each
April 81
June 83
July 83
August 83
September 83
October 83
November 83
January 84
March 84
March 90 missing its front cover
May 90

Subject: Anyone need Hallicrafters S20R parts????

Hi All,
Thanks to a most generous ham, (thanks Craig C.) I have an abundance of S20R
chassis parts that are excess to my meager needs. These are parts like I.F's,
function switches, dial pulleys, (sorry, the power xfrmr is mine) etc... I am
going to chop up the chassis this weekend at work and will save anything that
anyone has a need for. Please email me directly with your needs/wants and I
will get back to you asap.
rgds,
Mark S.

Subject: Anyone need Hallicrafters S20R parts????

Mark,

Would you happen to have the speaker with mounting bracket? That is all I need
to complete my trusty S20R.

Thanks,

-Bob Warner

Subject: ARC5 transmitter rack needed

Do you need the AN/ARC-5 rack or the SCR-274N rack for
your transmitters? They have different connectors.

If your transmitters are BC-4xx, you need a 274N rack.

FOR SALE
Replies sent to merz.ds@mellon.com will get faster response.

Military Navy Receiver Type RDR. Made by RCA with big RCA meatball logo
on the front panel. This looks like a 10-channel VHF receiver. In
cabinet with handles on sides and lid that screws-on. Cabinet has a
lot of scuffs and scrapes. But the front panel is very good or
better. I think this is unused. With original power cable. Must
weigh 60 pounds. I'm guessing 1950's vintage. Very classy
boatanchor. $70 I have JPG photo of an identical radio and some
specs in a TIF file if anyone wants to see those.
Communications Equipment Company RHZ receiver. This is a fixed-
frequency HF receiver designed for airport frequency monitoring.
Crystal-controlled. Tuned to either 3105 kc or 3117 kc. Retunable to
any nearby frequency with procedure given in manual. Will go to 80
meters with no coil mods and 160 meters with minor coil mods. This
is a 19" rackmount radio, 5" high with simple black wrinkle front
panel. Front panel is excellent. The cover has some scratches--some
deep. Tube lineup is 80, 6V6, 4-6K7, 6K8, 6SJ7, 6H6 and 6SL7GT. With
original manual: $50. Heavy.
Swan 14-X DC power supply module. Plugs into Swan 117X power supply and
permits operation from 12VDC. One small rust spot around positive
connection. Otherwise looks good. Untested. Unmodified. $25

Ampex 350 tape deck. Classic recording and radio station deck that used 1/4" magnetic tape and accomodates 15" or 7" reels. The 350 features excellent audio specs even 25 years later. The 350 model was available with many different head and electronics configurations including provision for using 1/2" tape. But this one is as basic as you can get. It's set up for glorious full-track monaural at either 7-1/2IPS or 3-3/4IPS. The record/play amp is a single solid-state Ampex unit model 4020251-05. Both deck and rec/play amp are 19" rackmount and take up 21" of rack space together. The deck and amp look very good or better and work very well. Comes with a homebrew remote control on a 25' cable. This thing is capable of marvelously musical recordings. But I just used it for off-air fooling around. With manual copy. $120. This is heavy and will cost $50-$60 to ship. JPG photos available on request to merz.ds@mellon.com

T-19/ARC-5 command set transmitter. WWII-era TX used in Navy aircraft. Covers 2-4MC. Requires 28vdc. This one is ham-modified with an SO-239 antenna connector and a 1/4" phone jack on the font panel. It is missing the final tubes and the final tube cover. The rear connector has been changed to a 5-pin tube socket. As-is. $18. For $10 more , I can include a pair of 1625 tubes.

T-22/ARC-5 command set transmitter. WWII-era TX used in Navy aircraft. Covers 7-9.1MC. Requires 28vdc. 100% original except it is missing the crystal. Dirty. Has a couple paint chips. With all tubes. Nice. $44

R-23/ARC-5 command set receiver. WWII-era RX used in Navy aircraft. Covers 190-550kc. Requires 28vdc dynamotor which is not included. This is the one with the 3 antenna connections marked L, L and A, plus the antenna switch marked A--L. Appears to be all original except for terminal strip mounted on dynamotor studs on rear. This was done so as to be easily removed. But there's solder on the dynamotor pins. No unoriginal holes. Good paint. With original FT-230 dummy box on front panel. Nice. $34

R-23A/ARC-5 command set receiver. Korean-war-era RX used in Navy aircraft. Covers 190-550kc. Requires 28vdc dynamotor. This is the one with the 3 antenna connections marked L, L and A, plus the antenna switch marked A--L. Appears to be all original except that the 2 front panel studs used to hold the radio into a rack have been removed. Missing FT-230. Requires 28V dynamotor which is not included. Stamps on front panel say "27-OH 6 1954"and an unreadable logo in a pair of wings with the mark "A-15" below them. $34

BC-454B command set receiver. Part of the Army command set rig SCR-274N. Used in Army aircraft. Bare aluminum case (unlike ARC-5 radios which are black wrinkle). Covers 3-6MC. All original. Very dirty with lots of little dents in the case (not on the front panel). With original FT-230. One clasp on the tube cover is broken. Easily restored. Made by Western Electric. $38

Lysco Model 129 Mobile transmitter for 10 and 11 meters. 1950-vintage mobile AM TX that is tiny. Used 3 6AG7 tubes. Requires 350VDC and 6.3V. Some chips on paint but excellent overall condition. Pilot lamp has been changed to unoriginal lamp using original hole--easily

returned to original if you don't like it (though it looks fine and
is tough to spot). With manual copy. Neato. $40

Thanks.

From: richcom@earthlink.net (richcom)
Subject: Beware of Dick Burke

He goes under two emails: n1rsp@qsl.net & toby@gis.net

I replied to a post regarding two laptops. Dick told me they had two
batteries and no power cords. He told me they did not have built in
mouses but would supply a mouse for one. I said fine for $85.
He would only accept Cashier's Check. Everything was his way.

After my cc was in the mail, he emails me the next day, Sunday,
telling me, oops, sorry only one battery. But I'm throwing in the
mouse. Well, the mouse was already in the original deal. So now
for my money I'm only getting one battery where I was purchasing TWO.

Now it's not a deal anymore. So I quickly emailed him back and told
him that I did not want the deal anymore and to please send back my
cashiers check when it arrived.

To verify it, I phoned him on Monday, because NOW he's ignoring
my emails. His wife rudely spoke to me and acted stupid. She
didn't know where he was or when she would see him. That was
the second hint that I was dealing with unscrupulous people.

What a pair! They deserve each other.

So I phoned again that evening and the phone was busy and still
no emails.

The next day, he decides to tell me that my check was immediately
deposited and my computers were in the mail. WOW, isn't that
something, he takes my money and sends me what he wants, which
is a lesser deal than agreed upon.

His emails became very foul and abusive. So I am now dealing with
a trashy mouthed person. I'm out the $85 but I hope this is a warning
to others before dealing with such garbage.

If anyone wants to see his nasty emails. Let me know, I'll send them
to you.

I was a gentleman through the whole deal. Something that he can't say

about himself.

So BEWARE of trashy, crooked, lying DICK BURKE.

The moral of the story is: he misrepresented his items, took the
money and ran!

He decided to change the deal and I am stuck with it. Is that fair to

anyone out there? You decide.

Subject: Collins 212Z-1 Remote Amplifiers for sale

I have in good condition two 212Z-1 Remote Amplifiers. These are solid
state, 4 Channel AC or Battery operated portables in cases for on the
spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent
for AM Transmitters requiring line level audio input. Built in 400Hz
tone for setups and program monitor for headphones. All XLR inputs and
also telephone connections. With a really large VU Meter in the center
makes it a real great addition to any station. $395 each plus shipping.

From: n6kb@fix.net (Ken Brown)
Subject: Collins TCS For Sale

I have a nearly complete (no control boxes) Collins TCS radio set for sale. The RX is gray and the TX is black. So I suppose you could say that they don't match. They work though and I have the AC power supply and interconnecting cables. I understand the AC power supply is fairly rare, as dynamotor power supplies were the usual set-up. I don't want to even consider shipping this set. It is just too heavy and to much work to properly pack them. So if you want the set you'll have to pick it up in San Luis Obispo. E-mail me at n6kb@juno.com if you're interested and want to make an offer.

It would be a lot easier for us if you would just post the whole URL
that your ad is listed at on eBay.

Subject: FA: Collins PM-2 AC Power Supply for KWM-2/2A Item #363726724

Collins PM-2 "Lightweight" A-C Power Supply for the KWM-2/2A Transceiver in Good working condition. The original owner made some cutouts in the rear chassis cover (what was he thinking?). I recently acquired it with an a

KWM-2 that I am restoring and will be powering with a 516F-2. Included is an original manual that I got with the unit.
It is heavy for shipping at about 14 lbs. Buyer pays for a heavy corrugated box and bubble wrap ($2.50) plus actual shipping for FedEx 3 day or USPS (I do not use UPS here, too much damage). U.S. sales only please.

Subject: Field Day

Greetings All

I realize this is slightly off-topic, but none of my tube gear was ready in
time. Just participated in Field Day for the first time since 1956. Lots has
changed, but the comraderie and fun mixed with a certain frantic energy are
still there. Most encouraging were some young faces and their expressions as
they made contacts in their first contest.

Anyone that thinks Amateur Radio is dying should try participating in this
event, you'll get a whole different view. I served as gopher, generator gasser,
beam rotator, roof leak fixer in the worst rain, and operator and logger.
Looking forward to next year.

Yes indeed that is where you see it all (Field Day). And don't forget
about all the CW activity. Not bad for a dead mode.

Subject: Field Day

Field Day 2000!!!

Excellent CW activity including the Novice portions and good operators too!!!!!
I ran my trusty Heath HW-8 with a lantern battery and about 1 watt output (at
the most...hi). Used my old McElroy bug too.....Lots of fun!! Antenna is a
simple zepp in the attic!

There was so much activity I need to build another CW filter to add to the
audio filter in the rig!

CW is in no way fading out :-) I plan on doing my part and more to keep it that
way!

Don't for get QRP too, lots of fun!

Subject: for sale, GONSET: SIDEWINDER ssb am cw

i have a complete [not working] gonset sidewinder 2 meter tranciever. its all
there and the power-supply seems to work as it powers up the rig.....but it
does nothing. oh the lights come on but no receive or transmit. there are a
couple of tubes in there, maybe there bad, i dont know. this is a 144 to 148
mhz ssb, am, and cw tranceiver. the complete manual is included with this set.
if your handy and can trouble shoot this thing it would make a very nice
vintage set-up. if your familiar with the rig you know it's not very large but
it does weigh about 25 pounds so packing and shipping will cost around $20.00
if anyone is interested i will take $40.00 and that will include the shipping
any where in the lower 48 states. thanks in advance & 73.....george

Hi George,
I'll take the sidewinder if still available AND the front panel is in nice shape.
I live in N.C. Let me know on how you would like payment.

Subject: FS: SBE-34 with Mic and manual

SBE-34....This is a compact travel transciever, solid state, except for the driver and finals. It works, but could use an alignment and general going over. The service manual and operating manual are included with the rig....The original SBE mic is too...this rig also has a Collins 2.1khz filter in it as originally supplied. The radio is clean and in good condition. This rig is also capable of 12 VDC operation, though I have not tested that feature.
Price: $140.00 Shipping is additional.

Subject: FS Ten Tec Power Supplies (2)

I have too many ten Tec power supplies and need to sell two. Selling at a loss to move them.

1. 262G Power supply for the Triton IV (540) blew the fuse..it lights but no voltage $50 with manual/schematic.
This has the VOX circuits and they are OK.

2. 252M Power Supply with cable for Omni and manual/schematic. This has a ten tec speaker and amp meter
and works. $80

Will sell both for $110. Send me $120 and will ship CONUS. Reply by e-mail only.

Hello. I acquired an FT-101-E at a hamfest this weekend and have had a couple of problems tuning it up.

Date: 22 Jun 2000 00:38:12 GMT
From: n2ey@aol.com (N2EY)
Subject: FT-101 vs. TS-520?

In article <394DF705.C1D3F900@mindspring.com>, Will
writes:

>One other question (and thanks to those who have replied): what is the >difference between the 520, the 520S, and 520SE versions?

Hello Will,

While my experience with them is limited, I would favor the 520 over the 101. There are actually many versions of the 101, and some of the early ones had some odd problems.

The 520 has an AGC off position, which not many rigs have. It's very useful on CW. Also uses the common 6146 final, rather than the sweep tubes in the 101 (but there is a mod for the 101 to use 6146s)

TS-520: 80-10 meters, white dial, early version. Good, but not the best.

TS-520S: 160-10 meters, gray dial, hookup for DG-5 digital readout

TS-520SE: 160-10 meters, no provision for DC operation. Late model, somewhat less expensive.

There is also a very rare version with the digital readout built-in.

I'd look for a clean 520S or SE. Main points would be condition, CW filter, and whether it had the DG-5.

As to rising prices, I've noticed an odd effect over the past 33 years as a ham. It seems that when a rig is current, its value is pretty high. Then as it gets older, its price slowly drops until it reaches a minimum at age 20-30 years. After that, it becomes an "antique" or "collectible" and its value rises again - often beyond its purchase price!

About a decade ago I saw a mint condition 75A4 with all the filters at a hamfest for $250 - and it wasn't selling. Today that same receiver would get several times that - even off eBay!

Subject: Hallicrafters digital! clock radio, this an Asian import?

See the newsgroup alt.binaries.pictures.radio for the article:
Subject: Hallicrafters digital clock radio(!) [1/1]
It is a picture of an alleged Hallicrafters radio set, but it
is just an AM/FM analog tuned solid state digital clock radio!
Did some Asian outfit buy the Hallicrafters name?

Date: Fri, 23 Jun 2000 14:45:22 -0500 (CDT)
From: Bis_Wichy@webtv.net (=?ISO-8859-1?Q?-_WD=D8HCO_-_Dallas_TX_-?=)
Subject: Hallicrafters digital! clock radio, this an Asian import?

Several companies had owned the Hallicrafters name. Last ham rig was
produced in 1972 -73.

The name was then sold. Saw some Jap Radios and one Jap CB with the
Hallicrafters name.

Several individuals bought the name in the hopes of starting a business
but all failed and went bankrupt. No one seems to know who the names
owner is now...

Not that it matters - except for a few hams and SWLs, no one under 30
seems to remember the Hallicrafters brand (or admits to knowing it)

Pity - they made some fantastic radios at prices normal folks could
afford...

Subject: Halli SX-28's LF amplifier tech questions

>1. design guidelines and pro's and con's of the approach
>2. working conditions of the pre- and final- amplifier (A, AB,AB1,AB2,..)
>3. what is the C40 function?
>4. What is the C76-R43 network useful for?
>5. Why is R37 shorted when the "bass" switch it in the OUT position?
>Shouldn't it remain in for the sake of symmetry with the inverter plate
>resistor R36?

Emanuele,

The audio section in the SX-28 uses the approach where the preamp drives one
half of the push-pull pair, then the grid resistor from this half is tapped and
the signal is taken from the tap and amplified by the other half of V12 to
provide the opposite phase. This approach yields high gain and was fairly
common in it's day. The S-27 and S-36 amplifiers were similar. Though I haven't
actually measured the bias voltages, I suspect the outputs run close to AB1,

while the preamp is A. C40 is probably a phase correction to insure stable operation. C76-R43 similarly roll off some of the high frequencies, or might be to give some protection of the output transformer if the load is momentarily removed while signal is present. Regarding the bass switch and R37, that is a real mystery. I never noticed this before. I wonder if the circuit is REALLY wired that way, or if it is a misprint on the schematic. I suspect the latter since LC network CH2 and C43 as well as the C42 and the TONE potentiometer R35 are shown shorted in the IN position of the switch. Operationally, my SX-28 TONE control works in either position of this switch, so something is strange somewhere. If yours is already apart, trace the circuit around the switch. Let me know what you find.

Subject: Kenwood TS520S Question

I have a TS520S that is truly NIB, it has not been touched or even used,
which can be seen by looking at the final section as all components
are very shiny and new, as is everything else inside and out, like it
was made yesterday! It also has two filter installed, a ssb and cw
Kenwood factory. I was wondering what the true collector value would be,
not what a everyday hamfest price would be. Any collectors out there?

Thanks for any info...Curt

From: "Leith Jennings"
Subject: KWM2A Disaster

Hi all
I have just received a KWM2A from upstate NY. It was packaged in the CC-2 carrying case and securely packaged in a box. It must have been dropped and the case opened and the radio bounced around in the case on it's face for 14,000K. Hindsight is a wonderful thing and if the CC-2 had been tied or taped shut, the severe damage wouldn't have happened. However.... it's not a perfect world and !

I need help in locating the following parts for my basket case KWM2-A.....

1. A meter complete or a meter housing (The meter guts appears to be undamaged but the case is smashed)2. A main dial escutcheon plate (black phenolic with KWM-2A engraved on it)
3. A main tuning knob complete with finger inset.
4. A PA tuning knob.
5. The thin escutcheon plate that covers the band switching card.

I am pretty sure that I can remove and straighten the front panel.

Any help would be appreciated.

Here are the tidbits of info I have on my "master card file" --

TS-452/U FM Microvoltmeter/Scope/Signal Generator
manual is TM 11-2695
also try USAF T.O. 33A1-8-89-12 (sorry, don't have either here)

covers 5 to 108 MHz in 6 bands
115VAC, single-phase, 50 to 1600Hz input power
metal carry case
90 pounds
originally cost govt. $475
In Oct. 1963 E.C.Hayden surplus house sold them for $75

Subject: Need Parts - Kenwood T-599D Transmitter

Hello fellow boat anchor users,

I am trying to repair my T-599D, which suffered a "meltdown" in the Bias Control circuit board when a final tube developed a screen grid to control grid short. I need two high voltage transistors, made originally by Hitachi. They are part numbers 2SC856 and 2SC857. RF Parts does not list these types. Pacific Coast listed them but could no longer supply them. So if anyone out there knows where these parts (or functional equivalents) might be available, I would very much appreciate hearing from you.

Thanks and 73,

I've often wondered about this assertion (guns being inherently more dangerous because of their design goal). Two facts come into play: cars are not expressly designed to injure

people. How do the gun control people reconcile that fact,
the number of people harmed by cars, the number of people
harmed by guns, and the design goals of each?

Second fact. I suppose I'd better say "fact". I read it
in '73 magazine so who knows. Anyway, Wayne Green
claims that when gun control was enacted in Austrailia
the crime rate soared. This goes to the argument the
anti-gun-control folks put forward - that only criminals
will have guns. Anyway, how do the pro-gun-control
people respond to it. I do not find fault with the fact
that if guns are outlawed, then only criminals will have
guns when understood to mean outlawing possession
for the ordinary citizen. I definitely want U.S. soldiers
to be very well armed!

Guns are by no means expressly designed to injure people. They are expressly designed to propel projectiles. The intent (and the lack of skill and training) of the individual operating the gun can and does cause injury to people.

Just like a car. The intent and the lack of skill and training skill of the person opertaing it can and does cause injury to people.

Your correct reply does not represent the pro-gun
control people's thinking. They claim guns are
designed to hurt people - see Leonard Martin's
post. I've heard that argument time and time again.
The same people who are vehemently opposed
to gun ownership by ordinary people never say
we ("ordinary people") should not own cars. Yet
far more people are killed/injured by cars. If saving
lives was the true motivation, I would think that the
pro-gun-control people would be as vigorous in seeking
a solution to automobile related death/injury as they
are in seeking gun control. But I want to hear from
those who claim that a gun " is an object expressly
designed to injure people" on this point. Their "logic"
escapes me.

Ah yes, comparisons can be drawn along the lines of similarity of "projectileness" and of dangerousness of guns and cars, and they have some merit. However, what you are not aware of is that, in public policy and legal reasoning, another step is invariably taken once a partially-successful analogy such as that between cars and guns is drawn. In this second step the decision maker proceeds to "weigh" the usefulness of the thing in question against its dangerousness in deciding what degree of regulation to place on it. That is, even if thing "x" is found to be similar, in degree of dangerousness, to another thing that is lightly regulated, a court will nevertheless find greater regulation called for in the case of "x" if its social utility is less.

E.g., in the early days of railroads, countless accidents convinced courts that trains were extremely dangerous--perhaps as much so as explosives. Nevertheless, courts declined to impose liability without proof of fault for injuries caused by train wrecks, as was commonly done with injuries caused by explosives. The reason: Judges recognized that trains were a technology that was growing ever more vital to the development of the US economy. The enormous social usefulness of trains simply OUTWEIGHED the considerable harm they caused.

Similarly, automobiles have, factually, become essential to the day-to-day functioning of our society, so the law, recognizing the WEIGHT of that essentialness, permits cars to continue to be owned and not heavily regulated. If any gun enthusiast, on the other hand, really believes that guns have a similar practical importance, then I have a really interesting argument concerning why he should give me all his money that I'd like an opportunity to present to him.

To put it briefly, cars cause a lot of harm while making very great contributions to the functioning of society, so no-one wants to outlaw them or severely limit their ownership. Guns, in a civilized, policed society, have very little utility, while causing as much or more harm than cars. Therefore it is rational to regulate them heavily and limit their ownership.

And no, the facts that you love your gun, that owning it connects you to a tradition of manly activity that makes you feel good, or even that, in some HYPOTHETICAL future period of fascism here in the USA you could use your gun to resist oppression--none of these, as a matter of logic and reason,

OUTWEIGHS all the huge amount of death and other harm that guns now cause.

That's why we have logic, reason, and law, by the way--so we wont be swayed
by emotional factors like the ones just named into making bad decisions!

Subject: Old tubes and surplus

My son probably wouldn't post this but I will. He has accumulated a
ton of really good surplus equipment and WWII vintage tubes, which he
is beginning to auction on eBay. If I had any room I would be bidding
on some of this stuff. And if he had any room he wouldn't be selling
it. He doesn't seem to like the idea of posting FA posts so you might
want to look in on this URL from time-to-time.

http://cgi6.ebay.com/aw-cgi/eBayISAPI.dll?ViewListedItems&userid=braddy

Hate this is spam but hope some people will appreciate it.

I don't frequent this group to often for chat just read. But, I saw this post & had to read it.

You guys are just a riot. I can;t beleive so of you actually have to make excuses just to bring in a radio.

Some of you guys ideas are just laughable. I'm glad I'm a radio collector. I have 2 boatanchors myself. Along with several other radios.

Steve I have to correct you on one thing. In the bible GOD said wife's submit to your husbands. Not women be submisstive to men. That had nothing to do with boatanchors. Or radios let along TV's and such.

Nice try. But, us woman aren't stupid.

WE buy, restore, sell & collect radios, TV's & appliances. So, I know what room means in the house. I make sure my husband tells me ahead of time he's getting something & how much room it will take up anywhere in the house or garage.

So, we can make room for it before he or I buy the item. It helps to plan ahead. My husband works with me on this & we watch out buget just in case it's to much to soon.

Building shelves in your garage & house helps out alot. It's true there no such thing as to much stuff as long as you have a place to put it.

Plus, keep stuff does help fix other stuff later. Also have sales every once in awhile helps as well. Looking through your stuff & deciding what you might need to keep & what has sat around for several years that needs to go helps the wife stay off your back as well.

Finding people that are looking for that part on line on radio buy, sell, trade helps it get gone quicker.

So, there are ways to make the wife happy. Just use common since. We do and it makes a great marriage in such a hobby.

Sincerely Paula Wood
Ft. Worth Texas. PS. Keep on Collecting Collectors.

Hi Ol Timer - why not put them on E-Bay -- reach a wide audience of buyers. Recent realized prices are:
Swan 350 SSB Transceiver $155.00
SWAN 350 SS TRANSCEIVER WITH PWR. SUP. $131.99
See URL:
http://cayman.ebay.com/aw/index.html
Type in Swan 350 and check "completed items"

Subject: TR-4XC are my tubes ill?

I have bought a Drake TR-4XC in Germany, connected to a dummy load and my daiwa wattmeter i measure 120W RF power on 80 meters , and about 100 W on 10 meters in CW. Is it regular or do you think that i have to plan to replace the final tubes?
Another question, do you suggest to mount a little fan to vent the rf stages?

bye

> do you suggest to mount a little fan to vent the rf stages?

Your tubes are working well.
A little lower output on 10 is normal, even with new tubes.
As long as you have room around the rig for air to circulate, they should be fine. Adding a fan just packs dust into the RF area, eventually leading to arc-overs when the dust gets too deep in the tuning caps. You could use a filtered fan, but it really isn't needed.
Kind Regards,
Dave S. AB5S

You are welcome to download a free copy of the manual from the BoatAnchor Manual Archive. While you are there check out the several hundred other manuals that are available for downloading. If you see that you have a manual that isn't in the BAMA collection, perhaps you would be willing to scan it and upload it so that others might have access to it.

Matt,

I don't have the manual, but here is some info from my "master card file"
that might be of interest to you... or someone else...

manual for SRR-13A is NAVSHIPS 92211
manual for SRR-13 is NAVSHIPS 91875A

unit works from 2 to 32 Mc (MHz) on cw, am and fsk
includes receiver R-441A
115VAC input

includes crystal calibrator
uses sub-miniature type tubes
important to have cabinet, as external connections are difficult otherwise
100 pounds
originally cost govt. $2400 each (in 1950s $$$)
in Oct. 1974 Edsall Surplus sold them for $175, with manual.

From: Lee Bahr
Subject: WTB WRL Globe Scout

I was trying to refurbish one and now maybe two WRL Globe Scouts. The
quest is growing and too lengthy to explain. I had a model 40A as a kid
and can get one needing silk screening now from another ham. I have a
model 66 and it is missing the 3 small knobs and also needs silk
screening. I maybe can buy a clunker model 65 with burned up meter,
front panel holes with rusty cabinet. I'm not sure about a reasonable
price on this one. I'd like to get a 40A going as it was my original
rig when I bought one new as a kid in 1954. I'd like to get the correct
knobs on my model 66.
Does anyone have a Globe Scout that would get me to where I want to be?
I can handle restoration and repair, if I can get the needed parts.
Thanks for your interest.

Now here's a rare one, I do believe. I have never heard of these before and would like to communicate with anyone familiar with this beast as I have a couple of questions about it. It is a 10-tube single conversion with one RF stage, 3 i.f. stages, and an elaboratly filtered AC/DC power supply, built by Federal Telephone & Radio Corp. of Newark, NJ in 1945. I was fortunate enough to find this for $15.00 (!!!!) at a swap meet, along with the original mimeographed operating/service manual. Construction is very impressive. I have almost finished the electrical repairs (90% of caps bad!) and hope to finish it over this holiday weekend. Would love to hear from anyone who has one or has used one.

1399. LAST DAY! FA: Multi-Elmac PSR-612 Power Supply for PMR-6/7/8

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-03 00:00:00 UTC
From: radiotek@pacbell.net
Message-ID: <3960cb0b.2026096@news.pacbell.net>
Source record: 64467

I have a nice Multi-Elmac High Voltage 6/12VDC Input Power Supply for the PMR-6/7/8 for auction. This power supply takes 6/12 VDC input and the output would be the voltages needed to power up the radio. I would say that these voltages would be: 6, 75-125, 250-350 and possibly 700-900 volts. So, this may be used for the PMR-6/7/8 or for powering up a different radio that requires those types of voltages. This is the LAST DAY and there is no reserve! I would say that this was made in the 1950's-1960's era.

Am looking for a real oddball--an 8D21 dual VHF tetrode. Need not be electrically functional--wanted for it's unusual appearance only. (a dud is actually preferable if the price is reasonable). A water cooled tube used in early RCA TV transmitters. Any old broadcast types have one in the garage? Have lotsa interesting junque to trade.

73,
Bob Weiss N2IXK

Source record: 64485
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap

For Sale: A Lambda model LRS-53-28 fully enclosed 28 VDC at 5.7 ampere (at 40 degrees c) power supply. In excellent condition. still has warranty seals on the case. Has +/- 5 percent adjustment. Also has optional remote sensing to guarantee the correct voltage arrives at the load. All connections via a barrier terminal strip on one end of the unit. Weighs 3 pounds. Size is 8 1/2 by 4 3/4 by 1 3/4 inches L W H. Great for the medium power FET RF amp or small surplus radio loads. All input/output terms are silkscreened on the case. Typical Lambda "Battleship" construction despite small size and weight. $65 post paid conus.

tnx for the read.

Bob, KE6F

From: "Bob"
Subject: FS: Small Lambda 28VDC/5.7Amp Power Supply

For Sale: A Lambda model LRS-53-28 fully enclosed 28 VDC at 5.7 ampere (at 40 degrees c) power supply. In excellent condition. still has warranty seals on the case. Has +/- 5 percent adjustment. Also has optional remote sensing to guarantee the correct voltage arrives at the load. All connections via a barrier terminal strip on one end of the unit. Weighs 3 pounds. Size is 8 1/2 by 4 3/4 by 1 3/4 inches L W H. Great for the medium power FET RF amp or small surplus radio loads. All input/output terms are silkscreened on the case. Typical Lambda "Battleship" construction despite small size and weight. $65 post paid conus.

tnx for the read.

From: "Marc Hildebrant"
Subject: Heath AT-1 questions

Hello Group,
I recently pulled my AT-1 down from the attic for a look see. The unit is complete, but it needs a good cleaning and fixup. The radio was built well, but someone came in later and messed around some. Different soldering techniques showing. Also, the selector wafer for the meter is broken.

Questions,

1. I have the QST mods by Lew McCoy to increase power, should I?
2. Is the quality of the CW good enough to make the fix up worthwhile?
3. Any other mods worthwhile for this rig?

Marc

From: radiotek@pacbell.net (MAG Electronics)
Subject: LAST DAY! FA: Multi-Elmac PSR-612 Power Supply for PMR-6/7/8

I have a nice Multi-Elmac High Voltage 6/12VDC Input Power Supply for the PMR-6/7/8 for auction. This power supply takes 6/12 VDC input and the output would be the voltages needed to power up the radio. I would say that these voltages would be: 6, 75-125, 250-350 and possibly 700-900 volts. So, this may be used for the PMR-6/7/8 or for powering up a different radio that requires those types of voltages. This is the LAST DAY and there is no reserve! I would say that this was made in the 1950's-1960's era.

Subject: Mackay Radio Model 138A, c. 1945 - questions

Now here's a rare one, I do believe. I have never heard of these
before and would like to communicate with anyone familiar with this
beast as I have a couple of questions about it. It is a 10-tube single
conversion with one RF stage, 3 i.f. stages, and an elaboratly
filtered AC/DC power supply, built by Federal Telephone & Radio Corp.
of Newark, NJ in 1945. I was fortunate enough to find this for $15.00
(!!!!) at a swap meet, along with the original mimeographed
operating/service manual. Construction is very impressive. I have
almost finished the electrical repairs (90% of caps bad!) and hope to
finish it over this holiday weekend. Would love to hear from anyone
who has one or has used one.

I have a 5v ct 30 amp filament transformer that was going to be used in a homebrew amp using a pair of 4-400's so it might work for you. It is in a potted rectangular can, mounts to chassis with four studs. The transformer actually has 3 5v 10a ct windings that can be connected in parallel. It has a multi-tap primary . I don't know what the maximum primary voltage is, when I got it it was set up for 120v. If you need to set the amp up for 240 volts the maximum voltage tap might work. If you are interrested I'll dig the transformer out of the junk box and see what the ratio is at the highest taps to tell if it will actually work on 240 volts. It is a well made transformer, possibly mil spec, though not a drop in replacement for the sb220. You might have to drill some new holes, make brackets, etc. I would let it go for $50 plus shipping. Let me know and I'll test it for possible 240v operation and get back to you.

Hi Rich,

As my limited time allows, I do repairs on amplifiers, radios and
electronic equipment. If you Email me off the news group, I'll be
happy to chat with you.

cheers

Wednesday, June 28th at 09:20 I downloaded 5 schematics as a test.
I had no trouble.

Regards
Reed

From: n6kb@fix.net (Ken Brown)
Subject: FS Hallicrafters 8R40 Receiver

I forgot to say in the original posting that the 8R40 receiver has 4 bands covering 550 KHz-1600KHz, 1.6-5.5MHz, 5.5-16MHz,16-44MHz and like most of these old receivers it is so deaf on the top band it is hard to tell that it is really working.

Date: Wed, 28 Jun 2000 12:43:28 GMT
From: n6kb@fix.net (Ken Brown)
Subject: FS Hallicrafters 8R40 Receiver

I have a Hallicrafters 8R40 Receiver for sale. I am unfamiliar with this kind of a model number for a hallicrafters. This model number is on a paper sticker inside the hinged top cover. There is no model name such as "Sky something" or number such as "SX something" on the front panel. The receiver is in fair to good condition and it works. It has octal tubes, all metal except for 5Y3 rectifier. So it is pre miniature tube era. The BFO "Pitch Control" know is missing, both Main and bandspread knobs probably had a chrome plated metal insert, which are missing, to match the ones on the other knobs. The main tuning knob has a chipped corner. There is a round indent over the speaker where a "h" logo is missing. Maybe this would have had the expected SX-?? number on it too. I had intended to restore it myself, and cannot find the time. I think it is worth around $100.00. Because of the condition which is good but not excellent I prefer to sell it only to somebody who actually checks it out for him or herself first. I don't really want to pack it up and ship it either, unless somebody is really sure that they want to buy it sight unseen. I am in San Luis Obispo, CA. If interested e-mail n6kb@juno.com and we'll go from there.

From: Mike Tatum <miket@cybatek.fsnet.co.uk>
Subject: FT-101 vs. TS-520?

Hi!

I've got both an FT101E and a TS520S.
I find the trio better when the bands are busy, the 101E seems to struggle
with adjacent stations.
The TS520S is better than the FT101E on 40m, on 40m the 101E suffers with
break through from the commercial broadcast
stations above 7.1mhz. The only way to use the 101E on 40m is with the
attenuator in.

The TS520S appears to receive better on the higher bands, 12m and upwards.
The TS520S feels more "refined" to use over the FT101E, but at the end of the
day I love them both!

Hope this helps ...

Cheers!

MikeT ...

From: "Robin Birch" <robin.birch@postoffice.co.uk>
Subject: HRO DECALS and PARTS

Dear All,
I've just aquired an HRO which is in poor external condition. Under the
lid, at the back, there is evidence of a decal being applied at some time.
This is about 15 mm by 20 to 25 mm. Can anyone tell me what it should be
and whether anyone makes replacements.

This is a "non miltary" HRO with UX6 bases, the original model as far as I
can tell. It was originally finished in black crinkle finish with a grey
chassis. As someone has repainted it in a fairly careless manner I am
probably goign to have to repaint the case and panel.

I would also appreciate any information about any other markings that should
be on the front panel around the switches and so on.

It has its original makers name plate but it is very tarnished and a good
condition replacement would also be nice if anyone can supply such a thing.

Regards

Robin

From: Skip Tyson <skipt1@ix.netcom.com>
Subject: Need National knob

National main tunining or band switch knob. It is a approx. 2-3/8 inches in
diameter and fluted on the edge. I am restoring a WW2 RAO receiver but it
looks like National used this knob on a several models ie. NC-100xa, NC-45,
NC-200 and probably many more. I found this this bit of history thrown out on
the street on yard clean up day. It had a bad power transformer and had been
partially junked out. It is turning into real project! Thank you for taking
the time to read this.

Source record: 64351

The Philco Repair Bench has just expanded
the Bakelite Block Condenser section with
"universal" lug arrangement types introduced
in 1937 for replacement use and for the newer
1937 Model year sets.

See the expanded Bakelite Block Cap section
in the EARLY PHILCO PARTS page.

1426. Balto-Wash Boatanchor Help

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-04 00:00:00 UTC
From: Nelson Pollack <pollackn@home.com>
Message-ID: <3962152A.4B425E2C@home.com>
Source record: 64352

In the Balto-Washington area, are there any boatanchor:

- places that repair/restore

- clubs or associations

have a happy 4th !

Thanks!

1427. Yaesu AM board 101z/zd/901/902? and misc FS/T

Newsgroup: rec.radio.amateur.boatanchors

I have some real GOODIES for SALE......Will be moving soon....

ICOM STUFF..............

1. I HAVE A VERY NICE ICOM 756 HF, & 6 METER TRANSCEIVER. S/N 001311
I AM THE ORIGINAL OWNER, AND A NON SMOKER, IT HAS 2 OPTIONAL FILTERS
FL-223 9 MHZ 1.9 KHZ SSB FILTER, & FL-222 455 KHZ 1.9 SSB FILTER.
I HAVE THE ORIGINAL BOX,MANUAL, PACKING, POWER CABLE, AND HAND
MICROPHONE $1399.00 PLUS SHIPPING IN THE US ONLY

2. I have for sale a very nice ICOM 575H 100 WATT 6/10 METER ALL MODE,
TRANSCEIVER, WITH ORIGINAL BOX, MANUAL, HAND MICROPHONE, ALL ORIGINAL
PACKING. I AM THE ORIGINAL OWNER, NON SMOKER, LOOKS AND WORKS GREAT
OPTIONAL VOICE SYTHESIZER, ANDTHE AM FILTER. ... $915.00 SHIPPED, &
INSURED IN THE US ONLY..

3. I have for sale a very nice ICOM 275H 100 WATT 2 METER ALL MODE,
TRANSCEIVER, WITH ORIGINAL BOX, MANUAL, HAND MICROPHONE, ALL ORIGINAL
PACKING. I AM THE ORIGINAL OWNER, NON SMOKER, LOOKS AND WORKS GREAT
OPTIONAL VOICE SYTHESIZER, AND I THINK I ALSO HAVE THE CW FILTER. ...
$915.00 SHIPPED, & INSURED IN THE US ONLY..

4. Icom SM-6 desk micrphone $50.00 shipped

HEATH KIT STUFF.....................

5. HEATH KIT HW-22 40 Meter SSB transceiver. " THIS IS A HEATH KIT
COLLECTORS DREAM RADIO" I bought it from a avvid Heath bulider, that
assembled it used it once , and put it on the shelf, and covered it.
It is in "LIKE NEW " condition, and I have the matching Heath Kit
power supply, Heath hand micrphone(white), and mobile mounting
bracket $185.00 shipped US only

6. HEATH KIT HW30 TWOER 2 meter am transmitter, again this was from
the same guy as the HW-22, assembled used once, and put on the shelf.
It is in "LIKE NEW" condition, with the matching Heath microphone, and

AC cable. $85.00 shiipped US only

7. Heath AM-2 reflected power/swr bridge $40.00 shipped in US

KENWOOD STUFF.............................

8. Kenwood IF-232C interface unit (2) left $75.00 @ shipped in US
Comes with data cabel, and copy of instruction manual
Can be used with the TS-140,680,440,940,850,450,690,950
9. Kenwood IC-10 (chip set) $40.00 shipped, used with the TS-440S, &
R-5000

10. Kenwood TU-6 tone unit for the TH-21,31,41 handhelds $40.00
shiipped
11. Kenwood TU-4C tone board for the TW-4000A $40.00 shipped
12. Kenwood YK-88C 500 hz CW filter for the TS-120S,130S,130SE, 430S,
440S, 530S, 530SP, 670S, 180S, 830S, 660, R-5000 $69.00 shipped
13. Kenwood YK-88CN 270 HZ CW filter for the TS-130S,130SE, 430S,
440S, 530S, 530SP, 830S, 670S, 660, & R-5000 $69.00 shipped
14. Kenwood MA-5 HF antenna 10,15,20,40, 80 meters in great condition
with carrying cloth case with manual $125.00 plus shipping
15. Kenwood MS-1 mobile stand for a TR-2500 handheld $25.00 shipped
16. Kenwood SMC-25 speaker mic for a TR-2500 $22.00 shipped

17. CUBEX matching transformer "new in the box" for a 2 element
cubical quad 10,15,20, and capable of 12, & 17 meters model number is
2229 of maybe its the serial number

PALOMAR STUFF.....

18. Palomar PT-310X preamplifier $40.00 shipped
19 Palomar PT-340 Tuner Tuner $40.00 shipped
20. Palomar Noise Bridge $35.00 shipped

YAESU STUFF.....

21. YAESU YC-500J frequency counter $70.00 shipped
22. Yaesu black speaker that matches the 300 series for $20.00 shipped
23. Yaesu LL-301 phone patch $40.00 shipped

24. Collins 189A-1 phone patch for the KWM-1 $40.00 shipped in good
condition with a very small switch..

73, & Thank You

Message-ID: <76c85.4945$oh5.374769@bgtnsc04-news.ops.worldnet.att.net>
Source record: 64488

Hello Group,
I recently pulled my AT-1 down from the attic for a look see. The unit
is complete, but it needs a good cleaning and fixup. The radio was built
well, but someone came in later and messed around some. Different soldering
techniques showing. Also, the selector wafer for the meter is broken.

Questions,

1. I have the QST mods by Lew McCoy to increase power, should I?
2. Is the quality of the CW good enough to make the fix up worthwhile?
3. Any other mods worthwhile for this rig?

Marc

I have a 5v ct 30 amp filament transformer that was going to be used in a homebrew amp using a pair of 4-400's so it might work for you. It is in a potted rectangular can, mounts to chassis with four studs. The transformer actually has 3 5v 10a ct windings that can be connected in parallel. It has a multi-tap primary . I don't know what the maximum primary voltage is, when I got it it was set up for 120v. If you need to set the amp up for 240 volts the maximum voltage tap might work. If you are interrested I'll dig the transformer out of the junk box and see what the ratio is at the highest taps to tell if it will actually work on 240 volts. It is a well made transformer, possibly mil spec, though not a drop in replacement for the sb220. You might have to drill some new holes, make brackets, etc. I would let it go for $50 plus shipping. Let me know and I'll test it for possible 240v operation and get back to you.

1453. Parts and QSTs for Sale - 7/4/00 list

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-05 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <20000704205630.10241.00004978@nso-bh.aol.com>
Source record: 64371

I have the following parts for sale. Too much stuff, not enough basement. Shipping (from 19087) is not included. Prices shown are asking prices for single units - let's make a deal! Discounts on quantity purchases. Shipping weights are estimates - you pay only actual shipping charges.

Variable Capacitors

TCS Receiver capacitor/dial assembly - 3 section capacitor with 4" dial and reduction drive (25 turns to cover range). 7" wide, 3-1/2" high, 3-1/2" deep. 1/4" shaft. Ceramic insulation, 2 sections 10-280 pf, 1 section 10-360 pf. Good condition. Price: $6 (4 lbs.)

Power Transformers (all have 117 V 50-60 Hz primary)

UTC S-41 power transformer. Upright, metal cased style with terminal board and solder lugs for connection. Secondaries: 1200 VCT @ 200 mA HV, 5 V @ 3 A rectifier filament, 7.5 V @ 3 A (tapped @ 6.3V) heater #1, 6.3 VCT @ 2A heater #2. Unused, like-new condition, terminals have never even been soldered to. Tested, works. Price $30 (10 lbs.)

Stancor PCR-300 power transformer. Upright, drawn cased style with leads. Secondaries: 550-370-75-0-75-370-550 (multiple taps on the same secondary) @ 300 mA HV, 5 V @ 6 A rectifier filament, 6.3 V @ 5 A heater #1, 6.3 VCT @ 1A heater #2. Used, good condition, leads have been identified and marked. Tested, works. Price $25 (20 lbs.)

UTC R-7 power transformer. Horizontal, "hole in the chassis" style with terminals. Secondaries: 700 VCT @ 100 mA(?) HV (current rating not marked, but at least 90 mA), 5 V @ 3 A rectifier filament, 2.5 V @ 8 A heater #1, 6.3/2.5 VCT @ 2A heater #2 (tapped so both voltages can be used). Used, dusty and a paint is scratched up, fair-to-good condition. Tested, works. Price $5 (5 lbs.)

Filament Transformers (all have 117 V 50-60 Hz primary)

Thordarson 6421 rectifier filament transformer. Antique upright style (from 1930s) with solder lugs for connection. Two independent secondaries: 5 V@ 3 A, 2.5 V @ 10.5 A. Used, tested, works, good condition. Price $3 (4 lbs.)

Isolation/Step Down/Variable Transformers

Stancor P-6383 - Primary is switch-selectable 210/230/250 V, secondary is 115 V. Rated 100 VA. Upright mounting, has built-in switch and 2 prong output socket. Can be reversed for step-up use. Used, tested, works, good condition. Price $4 (6 lbs.)

Superior Electric "Powerstat" variable autotransformer (similar to a Variac). Model 116-U. Input is 115V, output can be connected for 0-115V or 0-135V, continuously variable. Rated 7.5 A output. Open type, panel mounting with 3/8"

shaft, no scale provided. Can be connected for CW or CCW rotation, instructions on terminal board cover. Used, tested, works, good condition. Price $25 (10 lbs.)

Meters

Meter from military I-166 multimeter. Round black bakelite case, white face with scales. 0-100 uA movement. Labeled "calibrated for use in steel panels". Price $5 (1 lb)

Tubes

5687 tubes - These are an industrial dual triode. Have at least two dozen, all test good in Hickock 6000A transconductance tester. Price $1 each, 6 for $5, 15 for $10.

QST

1926 - These are all duplicates from my collection. Old and worn, but good reading. $2 each, or all 5 for $8 (1 lb):

March, 1926 - 96 pages, both covers missing. Some pages stained. Poor-to-fair condition.

April, 1926 - 96 pages, both covers missing. Fair-to-good condition. Better than March issue

October 1926 - 96 pages, both covers present but loose. Good condition. Better than April issue.

November 1926 - 94 pages, front cover missing, rear cover loose. Poor-to fair condition, about equal to March issue.

December 1926 - 112 pages, both covers present, front cover loose. Good condition, almost as good as October issue.

Miscellaneous

Snap Switch - A real antique, surface mount switch meant for house lighting but perfect for antique-style power supply on wooden chassis. Rated 10 A @ 250 V. Round white ceramic base with snap-on brown bakelite cover. Screw terminals inside, wiring is done via holes in the base. 2-1/2" round, DPST with double-break contacts. NOS, excellent condition. Price $2 (1 lb).

Octal Wafer Sockets - Brown phenolic. Have 9 NOS, VGC, 1-5/16 mounting centers, 25 cents each. Also 3 used, GC, 1-1/2" mouning centers, one with pin 6 missing, 10 cents each or free with any order. $2 for all 12. (1 lb.)

Millen HV connectors. These are the classic Millen high voltage connectors. Male (cable) end only! Have one red, one black, used, color is faded but in good condition otherwise. 50 cents each. (1 lb.)

Sonalerts - Model SC 628 Sonalert device by P.R. Mallory. Require 6 to 28 VDC @ 3 to 14 mA. Produce 2500 Hz tone at 68-80 dB SPL. Unused, tested, working, very good condition. Have 3. Price $1 each (1 lb)

Control Box for Alliance Tenna-Rotor. Classic unit from early '50s - sloping front brown bakelite case with meter. Old, beat up, cracked and glued case, some parts missing - a real bottom-of-the-junkbox find. Transformer, meter and switch assembly good. Price 10 cents or free with any order. (2 lbs)

Code Practice Oscillator Module. CPO-4 made by Carl Conover & Co. Mineola, NY. Classic unit from the early '60s - "All American Made!" Consists of a small circuit board with two transistors, one resistor and one capacitor, to be hooked up to a soeaker, key and 1-1/2 volt battery. NOS, still in original plastic bag. Looks like something you'd find at Lafayette Radio in 1962. Price 10 cents or free with any order. (1 lb)

Please feel free to email with any questions, and to make an offer for some or all of this stuff. More to come, too.

7/400

Folks: I have noticed several posts desiring above manual. I have the manual, but it is a bear! to copy-hundreds of pages, most are 8" X 22" fold outs-if sufficient interest, I will have professional copies made, but it won't be cheap. It's out of the take-it-to-Office-Depot class. If interested, please let me know. Also have Owners manual (much smaller) and pristine working unit with many accessories. Let me know your interests! Thanks! WG in beautiful NE Tenn

Hello,
I want to trade an HF transceiver MOTOROLA model MICOM-XF.
This is an outstanding digital radio:1.6-30 Mc/s, rated conservatively for
125 watt PEP, suitable for harsh environment as per MIL-STD-810C, full
computer control capability, etc.
It come with complete set of documentation and sw.

I want to trade it for a Collins receiver 75S3-C.

Pictures available by mail on request.

73' de
Claudio

> Walt (N4GL) --- boomer1@hitter.net ---

1n2422 = 500v PIV, 1.2v forward drop at 1.5A, si rect
1n1341A = 50v PIV 1.4v forward ay 6A, si rect, mot replacement = MR1120
1n1375A = si zener diode, 100vz 10w mot = 1n30005b
1n2976B = si zener diode, 12vz 10w

I have real old motorola book with a nice cross reference section.

Subject: FS: HALLICRAFTERS S-38D

I have a nice HALLICRAFTERS S-38D receiver available - the tubes all check ok; it's been cleaned up, has all original knobs, a few capacitors needed to be replaced. It looks good and works fine. $80 plus s & h from Schenectady, NY

LIST OF ITEMS FOR SALE: http://sdstudio.freeyellow.com/page3.html

Date: Wed, 05 Jul 2000 08:10:25 GMT
From: p34901@hotmail.com
Subject: FS: Hallicrafters SR-150 /w SP-120

I have a Hallicrafters SR-150 transceiver with SP-120 external speaker/power supply. There are some problems (e.g. I do not get reception immediately upon power-on, but only after the radio warms up for a few minitues) which I am sure can be repaired easily by those who are familiar with this type of tube receiver. I have the original manuals with schematics. The overall cosmetic condition is good with exceptionally clean front face (no slightest scratch anywhere on front face). Some wear along the edges of the cabinet and one knob is dented slightly. A good restoration project. Asking $200 + shipping. An excellent SSB audio with no drift. If interested, E-mail me for JPEGs.

From: N6AX

Subject: FS Drake R-4A, T-4X, MS-4, AC-3, Shure 440SL

Equipment is good working condition, speaker very clean,
transmitter and receiver faceplates very clean, TX full
output, top covers on TX and RX have some scratches but not bad.
Microphone has been beat up a bit, Shure 440SL desk microphone
with 936(?) base with PTT.

I am selling for our Boy Scout troop radio club and am looking
for the most I can get, (aren't we all?)

Please make offer if intrested on all or part.

Shipping will be extra on any/all.
Thanks

John

From: n2ey@aol.com (N2EY)
Subject: Parts and QSTs for Sale - 7/4/00 list

I have the following parts for sale. Too much stuff, not enough basement.
Shipping (from 19087) is not included. Prices shown are asking prices for
single units - let's make a deal! Discounts on quantity purchases. Shipping
weights are estimates - you pay only actual shipping charges.

Variable Capacitors

TCS Receiver capacitor/dial assembly - 3 section capacitor with 4" dial and
reduction drive (25 turns to cover range). 7" wide, 3-1/2" high, 3-1/2" deep.

1/4" shaft. Ceramic insulation, 2 sections 10-280 pf, 1 section 10-360 pf. Good condition. Price: $6 (4 lbs.)

Power Transformers (all have 117 V 50-60 Hz primary)

UTC S-41 power transformer. Upright, metal cased style with terminal board and solder lugs for connection. Secondaries: 1200 VCT @ 200 mA HV, 5 V @ 3 A rectifier filament, 7.5 V @ 3 A (tapped @ 6.3V) heater #1, 6.3 VCT @ 2A heater #2. Unused, like-new condition, terminals have never even been soldered to. Tested, works. Price $30 (10 lbs.)

Stancor PCR-300 power transformer. Upright, drawn cased style with leads. Secondaries: 550-370-75-0-75-370-550 (multiple taps on the same secondary) @ 300 mA HV, 5 V @ 6 A rectifier filament, 6.3 V @ 5 A heater #1, 6.3 VCT @ 1A heater #2. Used, good condition, leads have been identified and marked. Tested, works. Price $25 (20 lbs.)

UTC R-7 power transformer. Horizontal, "hole in the chassis" style with terminals. Secondaries: 700 VCT @ 100 mA(?) HV (current rating not marked, but at least 90 mA), 5 V @ 3 A rectifier filament, 2.5 V @ 8 A heater #1, 6.3/2.5 VCT @ 2A heater #2 (tapped so both voltages can be used). Used, dusty and a paint is scratched up, fair-to-good condition. Tested, works. Price $5 (5 lbs.)

Filament Transformers (all have 117 V 50-60 Hz primary)

Thordarson 6421 rectifier filament transformer. Antique upright style (from 1930s) with solder lugs for connection. Two independent secondaries: 5 V@ 3 A, 2.5 V @ 10.5 A. Used, tested, works, good condition. Price $3 (4 lbs.)

Isolation/Step Down/Variable Transformers

Stancor P-6383 - Primary is switch-selectable 210/230/250 V, secondary is 115 V. Rated 100 VA. Upright mounting, has built-in switch and 2 prong output socket. Can be reversed for step-up use. Used, tested, works, good condition. Price $4 (6 lbs.)

Superior Electric "Powerstat" variable autotransformer (similar to a Variac). Model 116-U. Input is 115V, output can be connected for 0-115V or 0-135V, continuously variable. Rated 7.5 A output. Open type, panel mounting with 3/8" shaft, no scale provided. Can be connected for CW or CCW rotation, instructions on terminal board cover. Used, tested, works, good condition. Price $25 (10 lbs.)

Meters

Meter from military I-166 multimeter. Round black bakelite case, white face with scales. 0-100 uA movement. Labeled "calibrated for use in steel panels". Price $5 (1 lb)

Tubes

5687 tubes - These are an industrial dual triode. Have at least two dozen, all test good in Hickock 6000A transconductance tester. Price $1 each, 6 for $5, 15 for $10.

QST

1926 - These are all duplicates from my collection. Old and worn, but good reading. $2 each, or all 5 for $8 (1 lb):

March, 1926 - 96 pages, both covers missing. Some pages stained. Poor-to-fair condition.

April, 1926 - 96 pages, both covers missing. Fair-to-good condition. Better than March issue

October 1926 - 96 pages, both covers present but loose. Good condition. Better than April issue.

November 1926 - 94 pages, front cover missing, rear cover loose. Poor-to fair condition, about equal to March issue.

December 1926 - 112 pages, both covers present, front cover loose. Good condition, almost as good as October issue.

Miscellaneous

Snap Switch - A real antique, surface mount switch meant for house lighting but perfect for antique-style power supply on wooden chassis. Rated 10 A @ 250 V. Round white ceramic base with snap-on brown bakelite cover. Screw terminals inside, wiring is done via holes in the base. 2-1/2" round, DPST with double-break contacts. NOS, excellent condition. Price $2 (1 lb).

Octal Wafer Sockets - Brown phenolic. Have 9 NOS, VGC, 1-5/16 mounting centers, 25 cents each. Also 3 used, GC, 1-1/2" mouning centers, one with pin 6 missing, 10 cents each or free with any order. $2 for all 12. (1 lb.)

Millen HV connectors. These are the classic Millen high voltage connectors. Male (cable) end only! Have one red, one black, used, color is faded but in good condition otherwise. 50 cents each. (1 lb.)

Sonalerts - Model SC 628 Sonalert device by P.R. Mallory. Require 6 to 28 VDC @ 3 to 14 mA. Produce 2500 Hz tone at 68-80 dB SPL. Unused, tested, working, very good condition. Have 3. Price $1 each (1 lb)

Control Box for Alliance Tenna-Rotor. Classic unit from early '50s - sloping front brown bakelite case with meter. Old, beat up, cracked and glued case, some parts missing - a real bottom-of-the-junkbox find. Transformer, meter and switch assembly good. Price 10 cents or free with any order. (2 lbs)

Code Practice Oscillator Module. CPO-4 made by Carl Conover & Co. Mineola, NY. Classic unit from the early '60s - "All American Made!" Consists of a small circuit board with two transistors, one resistor and one capacitor, to be hooked up to a soeaker, key and 1-1/2 volt battery. NOS, still in original plastic bag. Looks like something you'd find at Lafayette Radio in 1962. Price 10 cents or free with any order. (1 lb)

Please feel free to email with any questions, and to make an offer for some or all of this stuff. More to come, too.

7/400

Subject: 4cx800a & 4cx400a tubes

I have for sale Svetlana 4cx800a & 4cx400a nos tubes. These are new
tubes. They have never been used. These tubes were made to the rigid
specs of the Russian military. They are very heavy duty tubes. The are
every bit as good as any tube offered for sale anywhere! Including the

tubes offered for sale by the large commercial tube distributors. The price on the 4cx800a is $200.00 plus shipping for a matched pair and $110.00 for a single. The 4cx400a tubes are $90.00 each plus shipping. You can learn more and see my references at my web site. http://msnhomepages.talkcity.com/ClassifiedsCt/tomstubes/ Thanks for your time.

From: Dave Eckhardt <dave_eckhardt@hp.com>
Subject: Apache

I have an Apache which I have taken the scratch out. Possibly you could mention where the RF choke is and I might be able to help. I have the manual as well, so finding it would not be difficult. The best mod for the Apache is to undo the low frequency blocks, both in blocking capacitors and the high-pass filter, in the modulation sectiion. I have those mods if you need them, but let's try for the dangling RF choke, first.

To: sddxc@egroups.com
Cc: jqg@yahoo.com
Subject: [sddxc] SB 1714 California PRB-1, your support is needed

There is a bill now in Committee in the California Legislature SB 1714 which at first was an attempt to have PRB-1 limited federal preemption codified in the California Government Code. A well organized opposition has stripped the language which would have precluded a city of County zoning regulation form regulating ham radio antenna below 75 feet.

Those opposing the bill are well organized, It is critical to the eventual passage of a ham radio friendly statute for the voice of all amateur radio operators, and their supporters, such as those agencies and groups which benefit ad support amateur emergency communications to write, E-mail and call their Assemblyperson to support the passage of SB 1714.

There are at least two ways to find out who your assemblymember and what there address is:

1. Look in the government pages of your local telephone book. There you will find the local office of the assemblymember. Call the local office, and ask for the assemblymember's Sacramento office address.

2. Look at the web page http://www.assembly.ca.gov, and follow the "Find My District" link on the left side of the page. It will ask you for your street address, and return the name and contact information for your assemblymember.

Brad Wyatt, retired ARRL Pacific Division Director, wrote a letter to his assemblymember and the Local government Committee, which ARRL Volunteer Counsel K6HS has modified slightly to make "generic" and which is a good example of what you might say to your assemblymember. In writing your letter, put it in your own words to the extent possible. Otherwise, use parts of it or just copy it.

Be sure to send a copy of your letter to the:

Assembly Local Government Committee
1020 N Street, Room 157
Sacramento, CA 95814.

Here is the letter:

****

Dear Assemblymember <your member>

Senate bill SB-1714 has passed the State Senate, and is now before the Assembly Local Government Committee.

I support this bill and am asking you to support and co-sponsor the bill. Antennas and towers are key to successful communications for the 103,000 Amateur Radio operators in the State of California who are proficiency tested and licensed by the Federal Communications Commission.

As you may know, some cities, towns, and counties have developed land use standards which are so restrictive as to literally prohibit Amateur Radio communication. This bill would be consistent with and complement FCC Regulations, Part 97.15, in requiring municipalities to accommodate Amateur Radio.

The importance of Amateur Radio to California and the rest of the country is expressed well in the FCC rules:

97.1 Basis and purpose.

The rules and regulations in this Part are designed to provide an amateur radio service having a fundamental purpose as expressed in the following principles:

(a) Recognition and enhancement of the value of the amateur service to the public as a voluntary noncommercial communication service, particularly with respect to providing emergency communications.

(b) Continuation and extension of the amateur's proven ability to contribute to the advancement of the radio art.

(c) Encouragement and improvement of the amateur service through rules which provide for advancing skills in both the communications and technical phases of the art.

(d) Expansion of the existing reservoir within the amateur radio service of trained operators, technicians, and electronics experts.

(e) Continuation and extension of the amateur's unique ability to enhance international goodwill.

These objectives cannot be achieved if Amateurs are precluded from pursuing their avocation at home by local actions which impose significant application fees and restrictions which do not, as the federal regulations require, reasonably accommodate the Amateur Radio service.

Please support the enactment of SB-1714.

Very truly yours,

<your name>

cc: Assembly Local Government Committee

It would appear that there is a need for information on the SX-71! I
invite anyone who would like a copy of the manual to download it for
free from the BoatAnchor Manual Archive at http://bama.sbc.edu

Go back to the BAMA site. Click on FREE VIEWERS. Your browser in
useless for this purpose. You need a viewer/printer to handle the
files. There is a lot of good information also under the "New Users"
link from the BAMA home page.

From: David Black <dblack4@earthlink.net>
Subject: FS: Heathkit SB614, SB634 & SB644

For sale:

(QTY of 2) Heathkit SB614 Station Monitors with copy of manual. Both
stations are in excellent condition but perhaps rated good due to minor
scratches here and there on the cabinets. The front bezels are excellent.
Both stations display a horz. sweep and appear to be working.

One Heathkit SB634 station console with original manual. Station is in
excellent condition except for one element is out on a digit in the
counter display.

One Heathkit SB644 VFO in excellent condition and Includes the original
manual. Also includes all required cables to connect to SB104/104A
transceiver.

All above items are $95 each plus shipping.

Subject: Ranger Clinic

My Ranger I has an intermittent problem lately. Sometimes it won't xmit when
keyed -- until I tap on or move the VFO knob very slightly. Tapping the knob
(not the dial face or the cabinet) seems to turn the oscillator on and off.

Some of the guys on the local 75 meter net advise me to check the 6AU6 in the
oscillator compartment, check the screen resistor, and tighten the variable

capacitor's hardware.

Which I plan to do as soon as the WX cools down here a bit. Any other suggestions will be appreciated.

This is a memory stretch so take it as an opinion with a reasonable
chance of being correct. I believe you are talking about the filter
which is cylindrical in shape with SO239s at each end. I also recall
that there was an adjustable cap for the end sections. I believe these
were intended for use only on the HF ham bands so the upper cutoff
frequency was above 10M but below 6M.

Hi. Looking for a TRC77. This is not the same as a PRC77. TRC is a hf manpack. Please let me know price and condx. Thanks. Jim W7LS

1483. Hammarlund IF alignment?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-05 00:00:00 UTC
From: Brian Denley <bdenley@erols.com>
Message-ID: <8k0obdpia1@bob.news.rcn.net>
Source record: 64401

I own a very nice HQ-150 and I have the equipment need to do the IF alignment as called out in the Hammarlund manual. These descriptions are, however include amazingly little information. In doing to stage-by-stage IF alignment, they tell you where to inject the signal sweep but nowhere does it say where the o-scope is connected. Has anyone performed the Hammarlund alignment as specified in the manual? Do I connect the scope to the final IF stage output or the audio amp output? The scope is supposed to be in X-Y mode and the manual stresses that I should strive for scope pattern "co-incidence", in addition to symmetry and amplitude.
Thanks for any help
Brian Denley

1486. FS: SBE-34 Transciever

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-06 00:00:00 UTC
From: tubepwr813@aol.com
Message-ID: <20000705205247.22009.00001318@ng-cu1.aol.com>
Source record: 64404

SBE-34....This is a compact travel transciever, solid state, except for the driver and finals. It works, but could use an alignment and a bit of tlc. The service manual an operating manual come with the rig....The original SBE mic does too...this rig also has a Collins 2.1khz filter in it as originally supplied. The radio is clean and in good condition. This rig is also capable of 12 VDC operation, though I have not tested that feature. Price: $135 Shipping is additional. Have digital photo.

1487. FS: Harvey Wells Z Match

From: "Brian Denley" <bdenley@erols.com>
Subject: Hammarlund IF alignment?

I own a very nice HQ-150 and I have the equipment need to do the IF
alignment as called out in the Hammarlund manual. These descriptions are,
however include amazingly little information. In doing to stage-by-stage IF
alignment, they tell you where to inject the signal sweep but nowhere does
it say where the o-scope is connected. Has anyone performed the Hammarlund
alignment as specified in the manual? Do I connect the scope to the final
IF stage output or the audio amp output? The scope is supposed to be in X-Y
mode and the manual stresses that I should strive for scope pattern
"co-incidence", in addition to symmetry and amplitude.
Thanks for any help

On my original model RA17 the voltage is adjustable on the back panel for
110-120v and 220-250v (I think), doesn't the -17L have that?

It has that but the plug is a UK plug, so it wont go in my wall socket, do
they make adaptors?

Ah, I see what you mean...I believe you can buy adapters, I have one the
other way round for a laptop supply. (I'm in the UK by the way so my needs
are the opposite!)
Otherwise, chop the plug off and fit another one!

Subject: WTT:Motorola Micom-XF for Collins radios

Hello,
I want to trade an HF transceiver MOTOROLA model MICOM-XF.
This is an outstanding digital radio:1.6-30 Mc/s, rated conservatively for
125 watt PEP, suitable for harsh environment as per MIL-STD-810C, full
computer control capability, etc.
It come with complete set of documentation and sw.

I want to trade it for a Collins receiver 75S3-C.

Pictures available by mail on request.

From: Joe Geller <joegeller???@earthlink.net>
Message-ID: <ZE095.39526$_b3.1071777@newsread1.prod.itd.earthlink.net>
Source record: 64416

What is a good source for new old stock (NOS) Allen Bradley carbon composition resistors at reasonable prices?

I'm looking for quantity 3 to 10 of 270 kilo ohms, 2W, 5 or 10%, incase anyone has extras. I'd prefer the AB brown case with regular color bands to preserve the look of the old boatanchor.

Thanks,

Joe, WB2NOY

I have an old RT-18/arc-1 transcever I bought in 1967 I have
never hooked it up in all these years. It has all its tubes
and requires an external power supply. Do any of you have an
idea what its worth? Is it of some value or should I strip
it for tube audio projects?

Cheers
Eric

Date: Fri, 30 Jun 2000 21:54:25 -0700
From: "Bob"
Subject: arc-1

Hi Mate,

Would be a shame to strip it for parts as it has so few that would apply
to Audio Stuff. Is the dynamotor still in the unit? Where are you and do
you have any idea as to what your valuation is?

Tnx.

Bob, KE6F

PS I'd guess around 30-50 bucks if fairly complete with case and no
mechanical parts broken.

The ARC-1 requires 28 VDC. The internal dynamotor provides the B+ voltage. I have, over the years, converted several to 2 meters (that is to say, built a power supply for 110VAC). The rig will operate from 100-156 MHz at about 20 watts out (at best). They use 8MHz crystals (FT-243 types, etc.). They will do AM, normally, but CW is not a problem. I still have the little, splined tuning tools for these babies. Good luck with yours...don't trash it, they're getting harder to find, especially if they're in nice condition!!!! 73 de Jeep/K3HVG

Subject: CHEAP! FA: Multi-Elmac PSR-612 Power Supply for PMR-6/7/8

I have a Multi-Elmac PSR-612 Power Supply for the Elmac PMR-6/7/8. It is in very good to great shape! This power supply could also be used to power up some other piece of equipment that requires high voltage. The input is 6 & 12 VDC, and the output would be high voltage. I am not sure what the output is, I would assume something like 175-250 Volts, 350 volts and 6 volts, and possible 700-900 volts. It is currently going for a great price and there is NO reserve!

Subject: Collins 212Z-1 Remote Amplifiers for sale

I have in good condition two 212Z-1 Remote Amplifiers. These are solid state, 4 Channel AC or Battery operated portables in cases for on the spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent for AM Transmitters requiring line level audio input. Built in 400Hz tone for setups and program monitor for headphones. All XLR inputs and also telephone connections. With a really large VU Meter in the center makes it a real great addition to any station. $395 each plus shipping.

From: n6kb@fix.net (Ken Brown)
Subject: FS MF Receiver "A Unit of RBM-4 Radio Equipment"

I have a CAY-46076 Meduim Frequency Receiver. It covers 200 Kc to 2000
Kc in four bands. Accepted by the U.S.Navy in 1943. It's in really
good condition. It will not drive a speaker, probably supposed to feed
an external AF PA. It drive headphones well. I also have a homebrew
power supply for it which works, and has a lot of hum. You would
probably want to improve the filtering or use another power supply.
I figure it's worth about $80.00 if interested e-mail n6kb@juno.com
Pickup would be simpler than shipping, I'm in San Luis Obispo.

I can't help much but here's a little info about mine. Robin, the decal
says "National Radio Company" has their logo "NC" and under that says
"Malden, Mass". The decal is red and gold (at least, on my HRO - W).

On your name plate, just curious, what model do you have? It should say : type HRO - (letter designation). There are differences depending on the model. As I said, mine is a "W", military, made in March 1945. You should be able to find some pictures. I will send you a digital shot of the front of mine, bc. You can compare it with your front panel.

From: "canfield"
Subject: infor. needed: ITT Decca Marine receiver

Just picked up a unique receiver of sorts. Its a Decca DAL 222 Marine receiver. Dual Automatic Loran. It has a built in scope, two digital displays (the red tube types), a bottom panel for adjusting the scope and selecting which display. This one is setup to operate on 12v to 48v DC. It is in perfect condition inside and out. Has a serial plug for a remote on the back. Its approx. 7 inches high, 16 wide and 18" deep. Back panal reads: ITT Decca Marine, Automatic Loran A Receiver.

Can anyone tell me anything about this rig other than the above. What frequencies? How to operate. Setup and usage?

Would greatly appreciate it.

Bill KF4PGU

Date: Sat, 01 Jul 2000 05:48:09 GMT
From: "Lynn Coffelt"
Subject: infor. needed: ITT Decca Marine receiver

Not too much, but Loran A was a radio position determination system using a few channel frequencies in and near the Amateur 160 meter band. The two displays probably read out the "TD's" or time delays calculated from two different transmitters, transmitting on the same frequency. Calculations from triangulation of the two time delayed pulse groups would pinpoint one's position in one of two possible spots on the earth. Usually, one of the two positions could be ruled out by common sense (whatever that is), and the other would be your position. Charts were printed, to aid the navigator, overprinted with Loran A lines of position, anywhere on earth. Loran C (on a completely different frequency band) pretty much replaced Loran A in the 1970's (GPS is currently crowding out or making Loran C almost obsolete), and It is quite possible that there are no Loran A stations currently operating anywhere. Decca marine Loran gear was pretty high class stuff, and with a vivid imagination, experimental uses and modifications are unlimited. Schematics would be most helpful, Decca manuals were most comprehensive. I've seen what you need, in the dark and fading past, but unfortunately have lost touch with former repair stations which would probably be glad to unload the manuals to someone who could use them.

If you get the pre-built version, it's built like a tank and works great on all bands.

If you get the "kit", don't expect a Heathkit type assembly manual. And you'll be going hither and yon for more parts, too.

I bought it first as a kit, then decided it was more than I could handle. I sent it back and Lee assembled it for me at a reasonable charge. He did a great job, too.

I was pleased with it.

If it were a Heath transceiver or amplifier, it would be worth an awful lot, unbuilt, but a monitor scope -- it's hard to say what that will be worth, speculative-wise. I'd say if you like building kits, just build the darn thing.

From: Jim Hahn
Subject: Unbuilt Heathkit Question

There were 10 other guys bidding on the unbuilt HO-10. I won the final bid at $736. Before you guys tell me that I am out of my mind you have to remember that as a general dentist I just paid out god knows how much money to the laboratories that I use and I figured that I would get myself a toy that I have not had in years since I'm paying everybody else; dental hygienists here in San Diego with 2 years of junior college make at least 40 dollars/hr. due to law of supply and demand. Anyway that is my excuse; no I'm not a wealthy collector. I just figured that I wanted to build a Healthkit like I did when I was 15 in 1967. It is obvious however that getting into this aspect of the hobby would be a major financial endeavor that frankly I cannot continue. I'm getting e-mails now from guys that appear to be major collectors that really want this unbuilt unit. I don't know what to do. My wife has a fit when she starts to see the closet start to fill up with collector type stuff. Advice? Jim

Yep, if the wife is having fits -- FYI, you can rent an air-conditioned storage space for $60 or $70 a month that'll hold a whole of gear your wife doesn't really need to know about... :-)

Just bring home what you want -- keep the other stuff in storage. She'll think you're a reformed guy.

Subject: WTB WRL Globe Scout

Would buy unit for parts, especially the knobs, or nice unit. I have
two restorable Globe Scouts now, needing various work and parts. I
would eventually like to get them looking better then their present
condition. Any consideration would be appreciated.

Hi There:Just a quick note to get a little info on the power sup. That
you for sale. Is it the same power sup. and speaker combo that would be
compatible with Swan radios ie Swan 250.
If so please respond.
Thanks

Joe,

Try Newark.

I needed 50 of 33 at 2 watt about a year ago. I was informed that Ohmite was discontinuing the 2 watt carbon line. Seems they were bought out and were re-organizing the product line. A-B's may be dark green body.

Good Luck

Charlie

Source record: 64427

Hello,
I have recently acquired an old (hence the "Boat Anchor connection!)
Motorola VHF mobile rig, that I would like to convert for two meter use.
It is labeled as a "Radius GM300". Apparently, an external frequency
programming method is required. Can anyone tell me the details of what is
needed to do this? I assume that Motorola has no problem with this, given
that the radio was already in the ham surplus market, but I also assume
that they would not help either. Is there a PC based software package
available, in the amateur world, that would serve the purpose here? Any
ideas or advice would be greatly appreciated.

(Hey, cut out the laughing guys!)

Later model with enclosed relays, would be CCA excellent if the previous owner had not replaced the RF out jack with a UHF connector (it is well done and not sloppy.) Also have 516-F2 supply in cabinet, and new service manual. Am looking for a 75S3B or C, prefer C in at least good condition. Would prefer to deliver in person up to an 8 hour drive from middle Tennessee,
but can arrange shipping if needed.

Also have a G-133F reciever by LTV, a repackaged 51S1, good condition except for missing top and bottom covers. Neat rx with backlit black front panel for those who have not seen one.

Please email directly.

I don't know why I never thought of it before, having seen probably 500 re-runs, but what sort of station is that in Radar's office on "MASH"? I have heard the suggestion that the transmitter on top of the switchboard is a Hallicrafters, but it doesn't look like any I can find described in the Dachis book.

What is the transmitter (gray, with twin meters)? What modes, bands, and RF power were used?

What is the receiver, and where is it? I have been watching twice a day this week, and can't locate it in any of the shots, though the TX PS seems to be on top of the bookcase to the left of the transmitter itself.

What sorts of antennas would have been used?

As for the crank-up field-phone setup that Radar often uses to contact his buddy "Sparky", I-COR, and the 8063rd MASH, is that strictly a landline circuit, or radio? Did they use low-VHF in those days for such short distance communications, either AM or FM?

Thanks,

de Will KD7BFX

P.S. there used to be a web site devoted to ham/military/HF radio/CW in the movies and on TV. Does it still exist?

Any similiarity between what was used duirng the Korean war and what is
used as a prop for a TV show is more than likely to be a coinsidence.
What you see may well be a cardboard box with some knobs glued on.

Field telephones are wired. The crank is a generator which activates a
"drop" on the field switchboard or ring if hooked up directly to another
field phone.

Greetings, Heathkit buffs!
(you must be a green freak, since you're reading this posting)

I am parting out a Heathkit HW-2036A 2m FM transceiver. Before you ask, I'll state that this is not a restorable set. It was not working when I got it; it lit up and give a brief "pop" in the speaker when I turned it on, but that's all. I've used the speaker, knobs, and microphone to repair my own HW-2036A, but the rest of the radio is present. The front panel and S-meter face are in good shape. In fact, if it wasn't so much work, I would use them on my own rig. Both the top and bottom of the cabinet are dented and the paint is rough, so they're likely of little use (unless yours are missing altogether). The set is fairly clean inside and the circuitry has not been hacked up. The rear panel has been hacked (a previous owner installed a BNC jack for the antenna connection, and did it poorly). What parts do you need? Could I interest you in the whole thing, since I've gotten all that I need from it? Drop me a line.

From: "Joe Geller"
Subject: Allen Bradley 2W Carbon Composition Resistors

What is a good source for new old stock (NOS) Allen Bradley carbon composition resistors at reasonable prices?

I'm looking for quantity 3 to 10 of 270 kilo ohms, 2W, 5 or 10%, incase anyone has extras. I'd prefer the AB brown case with regular color bands to preserve the look of the old boatanchor.

Thanks,

Joe, WB2NOY

From: Charles Days
Subject: Allen Bradley 2W Carbon Composition Resistors

Joe,

Try Newark.

I needed 50 of 33 at 2 watt about a year ago. I was informed that Ohmite was discontinuing the 2 watt carbon line. Seems they were bought out and were re-organizing the product line. A-B's may be dark green body.

Good Luck

Charlie

From: Will
Subject: Anyone know M*A*S*H station specifications?

I don't know why I never thought of it before, having seen probably 500 re-runs, but what sort of station is that in Radar's office on "MASH"? I have heard the suggestion that the transmitter on top of the switchboard is a Hallicrafters, but it doesn't look like any I can find described in the Dachis book.

What is the transmitter (gray, with twin meters)? What modes, bands, and RF power were used?

What is the receiver, and where is it? I have been watching twice a day this week, and can't locate it in any of the shots, though the TX PS seems to be on top of the bookcase to the left of the transmitter itself.

What sorts of antennas would have been used?

As for the crank-up field-phone setup that Radar often uses to contact his buddy "Sparky", I-COR, and the 8063rd MASH, is that strictly a landline circuit, or radio? Did they use low-VHF in those days for such short distance communications, either AM or FM?

Thanks,

de Will KD7BFX

P.S. there used to be a web site devoted to ham/military/HF radio/CW in the movies and on TV. Does it still exist?

From: "NANCY GIANAKOPOULOS"
Subject: Hammarlund IF alignment?

Hi Brian,
You would probably hook the scope up to the output of the
final IF stage. Use very light coupling, so as not to detune the IF strip;
a 6pF coupling cap, in series with the scope probe would probably be ok.
Make sure that the voltage rating of the cap is at least 600V. I am not
sure if the IF strip is stagger-tuned in this model or not, but one thing
you can also do is to inject a noise source into the first stage of the IF
strip, and hook a spectrum analyzer at the output, observing the bandpass as
you tune. Good luck!

Pete Gianakopoulos

From: "Ross, Allan [WDLN2:2M56:EXCH]"
Subject: Programming for old Motorola VHF rig

Hello,
I have recently acquired an old (hence the "Boat Anchor connection!)
Motorola VHF mobile rig, that I would like to convert for two meter use.
It is labeled as a "Radius GM300". Apparently, an external frequency

programming method is required. Can anyone tell me the details of what is needed to do this? I assume that Motorola has no problem with this, given that the radio was already in the ham surplus market, but I also assume that they would not help either. Is there a PC based software package available, in the amateur world, that would serve the purpose here? Any ideas or advice would be greatly appreciated.

Subject: Wanted to trade: KWM-2 for 75S-3B or C

(Hey, cut out the laughing guys!)

Later model with enclosed relays, would be CCA excellent if the previous
owner had not replaced the RF out jack with a UHF connector (it is well
done and not sloppy.) Also have 516-F2 supply in cabinet, and new service
manual. Am looking for a 75S3B or C, prefer C in at least good condition.
Would prefer to deliver in person up to an 8 hour drive from middle
Tennessee,
but can arrange shipping if needed.

Also have a G-133F reciever by LTV, a repackaged 51S1, good condition
except for missing top and bottom covers. Neat rx with backlit black front
panel for those who have not seen one.

Please email directly.

> "drop" on the field switchboard or ring if hooked up directly to another
> field phone.

Not totally true.

I'm a little hazy on the date of fielding, but the integration of field phones and radio was around in the early '60s at least.

While the field phone is/was mostly used in hard wired circuits, the Army has had the equipment for 12 channel radio links for a long time now.

Radio links aren't usually used at less than a battalion HQ, so it would be unlikely for a MASH unit to have one, even if it were fielded during the Korean conflict.

For the detail obsessed, the equipment of the time would have been a CV-1548 telephone signal converter, TD-352 multiplexer, TD-202 multiplexer, and a GRC-50 or GRC-60 radio set. This was a whole van full of equipment and required a full time operator to keep it running.

The field phones are still used, but the van full of equipment is now a couple of boxes (still in a van, but you have to put it somewhere).

From: "D. S. Platt"
Subject: S-40A Hally/Q-multiplier

The connector was, in all probability, for a Heath QF-1, Q-multiplier. Its a
regen circuit that provides some IF selectivity and a notch filter. Actually,

they worked pretty well, given the type of equipment they were used with. The connection is a tap off the IF chain. You don't have to connect it to the receiver if you don't want to, nor do you have to remove the wiring insamuch its a "parasite" type of connection. (not to confused with parasitic....hi!). B+ and fil were taken from the host receiver.

What is an 89Y tube like.

Date: Sat, 01 Jul 2000 22:18:14 -0400
From: Brad Thompson
Subject: tubes

Richard Bauer wrote:

> What is an 89Y tube like.

Hello--
According to Ludwell Sibley's book "Tube Lore", the type 89 is a triple-grid (pentode) tube
similar to the type 59; the three grids allow considerable flexibility. You can connect
the grids to run the tube as a class-A triode (similar to a type 45), a class-B tetrode
(similar to a type 46) or a class-A pentode (similar to a type 47).

The type 89 has a 6.3V, 400mA heater.

The 89-Y featured a Micanol (brown-colored, low RF loss) base.

This tube was commonly used in low-leval stages in pre-1940 transmitters, if
I correctly remember the circuits in older Radio Amateur's Handbooks.

From: Bob
Subject: WTS: HRO-500. Working. $1k incl USA shipping. WJ-9049 system $21k incl shipping.
plus some other debris

Have an HRO-500
It works.
Could probably use good going over as it has had nothing done
to it since new.
I'll have some photos up at http://www.edebris.com/HRO-500
by late this evening.
$1K includes shipping in 48 states.
Will ship worldwide for additional.
Consider swap involving Signal One CX7 or CX11 or Drake 4130.
Also have a Watkins Johnson, one of three manufactured, one of
one known to still exist, monitoring system. Asking $21K including
shipping (three pallets by motor freight in continental USA) but will
entertain offers over $11K plus ship. Will include at least one NOS
display for use with the DRD. Radios are unmolested, cases
have never been opened. Pinnacle of WJ analog stuff.
Photos are up at http://www.edebris.com/WJ-9049
Other interesting stuff.
Raytheon Diverse Adapter, diversity receiving adapter, unused with
original Raytheon tubes $55 incl postage
http://www.edebris.com/Raytheon-diversity-adapter
HT37/HT32B/HT33/SX101A $1K plus ship (one pallet by motor freight
from 30306)
http://www.edebris.com/Hallicrafters
One tube RX or RX preamp, not sure $65 plus ship
http://www.edebris.com/Glowbuggy-thing
Actually labelled RF Communications, not Harris RX $55 plus ship
http://www.edebris.com/Harris-RF-501
Stylish Western Electric military radio $75 plus ship (heavy)
works but filter cap need replacing as it gets very hot.
http://www.edebris.com/Western-Electric-chrome-push-button-radio
Camera. What you see is what you get, I do not know Cameras $30 plus
ship
http://www.edebris.com/petri-2.8-color-corrected-super
Sun SPARC 10 with redHat 6.1 server installed. 32meg, 1gig, SM30
$175 plus ship. Excellent for low usage www server or medium usage
DNS or mail server. Ship is from 30306, 28lbs.
http://www.edebris.com/SS10
Lots more to be listed as I am moving to KH6 land and spouse
has imposed a one ton limit on the radio stuff I can bring :-)
Unfortunately, test equipment and computer gear falls under this limit
as well.
Have at least 10 tons of stuff, arghhh!
Did get the DeLorean sold even though blender was missing.

Part 1
Looks like UPS lost another one, a radio shipped from Wi.- to
Long Island
It has not been scanned since June 30 in CACH Illinois (Chicago processing
hub).

"The phone call"
UPS: "sorry sir are you calling about the radio"
.....YES, how did you know is a radio ?
UPS: are you the shipper or receiver
.....Receiver
UPS: Please contact the shipper we have no further information, it was last
scanned in Cach (Chicago processing hub) Illinois.
....You #@#$#%$% people lost another one on me ?
UPS: Let me give you my supervisor.

UPS Supervisor: Sorry sir contact the shipper he can request a tracer if its
2 days past the scheduled delivery date.
.....I have been calling you people since last week informing you it hasn't
been scanned anywhere requesting whats going on.

UPS Supervisor: Sorry sir I have no information you must contact the
sender.
.....Why "he didn't screw up" looks like "YOU PEOPLE DID", I have to get
back to work not sit watching for one of your stupid drivers to drop it off
at the
wrong house at the curb buy the trash cans.

UPS Supervisor: Sir I must get back to work also ....terminating
call

Part 2
I just caught the UPS driver dumping the radio at the bottom of the
driveway ...both 1st and inner box smashed like accordions, packing chips
flying all over, tape *over* tracking barcode, people looking on.

I run out "What the HELL is this" ....What happened here ?
Driver: All I can I can do sir is put " damaged box" into the computer.
.....Oh really why ask me, what the friggen hell is wrong with you !!
The whole box is destroyed and you had to think about making a damage note
of it ?

The radio's seems to work ok it was wrapped up in 1 inch foam rubber.
The sender did a great job packing
.....ALL BE WARNED

Part 3
After noting a damaged rear fan the UPS websight says "left with and
signed for by man at address" and no mention of damaged
box into the computer.
.....Also I did not sign anything, the driver took off quick when I
asked him to wait wile I check the damage.
"Must have been that 15 inch machete I got to open the rest of the
box"..... Hee Hee

Hi Brian,
You would probably hook the scope up to the output of the
final IF stage. Use very light coupling, so as not to detune the IF strip;
a 6pF coupling cap, in series with the scope probe would probably be ok.
Make sure that the voltage rating of the cap is at least 600V. I am not
sure if the IF strip is stagger-tuned in this model or not, but one thing
you can also do is to inject a noise source into the first stage of the IF
strip, and hook a spectrum analyzer at the output, observing the bandpass as
you tune. Good luck!

1544. FS: Box of 17 ARC-5 Variable Capacitors

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-08 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <20000708172036.11244.00005810@nso-fa.aol.com>
Source record: 64246

Hello Folks,

A few months back, I offered some variable capacitors for sale, and made a deal with someone for 17 of them. Unfortunately, through no fault of his own, he was unable to complete the deal. However, I packed them up for shipping while waiting, and they've been sitting in the box ready to ship for almost four months now.

So here's the deal: I'm offering the entire lot of 17 capacitors for $30 plus shipping from 19087 - that's an average price of less than $2 each. Of course some are more valuable than others, and condition varies from excellent to poor. (I just don't want to have to unpack and repack them all over again).

Here's a detailed list:

Oscillator tuning capacitor #5032 (from ARC-5 transmitter) - Single section variable, 30-150 pF. 16 rotor and 16 stator plates, .0625" spacing. Has beautiful 100:1 reduction gearing with antibacklash gears, but no dial. 2-5/8" high, 4" wide, 2-3/4" deep, with 3/16" shaft. Used, good to very good condition. Total of 5 of these, 3 with the flexible coupling shaft, 2 without.

Oscillator padding capacitor #4990 (from BC-459 transmitter) - Single section variable, as used in Command set transmitters. Has rotor lock and temperature compensator. Very good condition. Have 4 of these, all from BC-459s.

Oscillator padding capacitor #4990 (from ARC-5 transmitters) - Single section variable, as used in various Command set transmitters. No rotor lock. Fair to poor condition, need cleaning. Have 2 of these.

Amplifier padding capacitor (from ARC-5 transmitters) - Single section variable, as used in various Command set transmitters. With rotor lock. Very good condition. Have 1 of these.

Amplifier padding capacitor (from ARC-5 transmitters) - Single section variable, as used in various Command set transmitters. No rotor lock. Good condition. Have 1 of these.

Amplifier padding capacitor (from ARC-5 transmitters) - Single section variable, as used in various Command set transmitters. No rotor lock. Fair to poor condition. Have 3 of these.

3-gang main tuning capacitor from BC-453 receiver. Has padders and trimmers, no dial. Good condition. Have 1 of these.

Total weight of package 22 pounds. 17 capacitors in all. All packed up and ready to go - but you gotta take the whole pile!.

Hello fellow Swan Two-Drifty Owner,
I've owned aone of the above radios for about 6 years now and the manual says not to do what you did whilist keying the radio. Why? I don't honestly know. I do enjoy operating my Swan though and you should get an honest 125 watts or so output with a fresh pair of 6146-B's.
73 and good luck.

I've been using USPS for anything less than 5 lbs since their 2 day priority is CHEAPER than UPS 3 day, sometimes HALF the price! I havn't yet looked to see where the break even point is, but UPS is cheaper for very heavy packages. For very light packages USPS 2 day is cheaper or only cents more than UPS ground!

I had an 80 lb laser printer delivered by UPS with the box smashed and peanuts leaking out. The printer was well packed so it was not damaged, although the lid of the paper tray was pulverized! I managed to put humpty dumpty back together again with lots of scotch tape, after the buy sent me a replacement. Maybe I learned something from this before I shipped a Kenwood 2KW linear via ups from FL to CA. I double boxed the sucker, used lots of bubble pack, foam, tape and peanuts. My buyer reported it arrived un scratched! I tried to duplicate the packing as shown in the manual, and go one better. I also used a VERY heavy box 'stolen' from work (used to ship heavy lab equipment). I also put the tubes in a separate box! Somehow the two parcels arrived together! UPS said it had to be well packed because they have had them fall off 2 story high converer belts! (WHY NO NET?)

One solution is to get a news reader that is smart enough to delete
crossposts that you have already read. Agent is such a reader but it
will cost you a few bucks.

Hi Terry,

If you go to my sonic server amateur radio pages, you can see a conversion
of the ARU-251 to an external (Ham) controller. I did place the basic
block cicuit diagram there.

I'm sure with a little patience, I can probably dig you up a receiver
circuit diagram. I have a few of these repeaters in service now. Email me
direct at the address below if you still need one.

cheers

Hi Ross,

The GM300 is programmed with a computer interface called a "rib box", and the proper cable to plug into the mic plug. The software is typical Motorola Sourced, off brand software people were scared out of the business by Motorola years ago.

Most any two-way radio shop servicing Motorhead Radios can program it for you. A lot of amateurs like myself also have the stuff to do it. If you were close by me, I'd help you out for a six pack of diet pepsi... hey, not too bad.

The going rate for a two-way radio shop to re program a radio runs from about $25 to $35 max. More than that, they're sharks and I'd stay away from them.

cheers
skipp@pilot.ucdavis.edu

well,,,, over the last week my brother has been playing with my receiver and would now like one of this own.

he doesn't have alot of spare time so he would prefer one that is complete with all covers, works well, and is cosmetically good enough to reside in their rec room.

no preference to maker.

lemme know what you have and the price needed, thanks!

Any similiarity between what was used duirng the Korean war and what is
used as a prop for a TV show is more than likely to be a coinsidence.
What you see may well be a cardboard box with some knobs glued on.

Field telephones are wired. The crank is a generator which activates a
"drop" on the field switchboard or ring if hooked up directly to another
field phone.

Quite true.

> field phone.

Not totally true.

I'm a little hazy on the date of fielding, but the integration of field
phones and radio was around in the early '60s at least.

While the field phone is/was mostly used in hard wired circuits, the Army
has had the equipment for 12 channel radio links for a long time now.

Radio links aren't usually used at less than a battalion HQ, so it would
be unlikely for a MASH unit to have one, even if it were fielded during
the Korean conflict.

For the detail obsessed, the equipment of the time would have been a
CV-1548 telephone signal converter, TD-352 multiplexer, TD-202 multiplexer,
and a GRC-50 or GRC-60 radio set. This was a whole van full of equipment
and required a full time operator to keep it running.

The field phones are still used, but the van full of equipment is now a
couple of boxes (still in a van, but you have to put it somewhere).

the cease fire agreement allowed for NO interduction of new equipment....
therefore from what i saw in 1958... i would say that the correct set-up...if
by radio would be..EE-8 telephone...CF-1 carrier equipment...up to four phones
in...then to the AN/TRC-1 Radio...VHF 70-100 mcs...and there were circuits
using this set-up all the ways back to Japan...hill and island hopping...71`s
gene...WB7NGI..I.G.

So the scenes where the doctors give surgical instructions (human and
veternary) over the radio or Hawkeye talks to his dad in Maine by phone
patch (mil-->ham-->landline) are bunk? Santy Claus, they lied to me ;)

Subject: Parting out - Heathkit HW-2036A 2m xcvr

Greetings, Heathkit buffs!
(you must be a green freak, since you're reading this posting)

I am parting out a Heathkit HW-2036A 2m FM transceiver. Before you ask, I'll state that this is not a restorable set. It was not working when I got it; it lit up and give a brief "pop" in the speaker when I turned it on, but that's all. I've used the speaker, knobs, and microphone to repair my own HW-2036A, but the rest of the radio is present. The front panel and S-meter face are in good shape. In fact, if it wasn't so much work, I would use them on my own rig. Both the top and bottom of the cabinet are dented and the paint is rough, so they're likely of little use (unless yours are missing altogether). The set is fairly clean inside and the circuitry has not been hacked up. The rear panel has been hacked (a previous owner installed a BNC jack for the antenna connection, and did it poorly). What parts do you need? Could I interest you in the whole thing, since I've gotten all that I need from it? Drop me a line.

73,
Dean, K5DH

From: Skipp <skipp@pilot.ucdavis.edu>
Subject: Programming for old Motorola VHF rig

Hi Ross,

The GM300 is programmed with a computer interface called a "rib box", and the proper cable to plug into the mic plug. The software is typical Motorola Sourced, off brand software people were scared out of the business by Motorola years ago.

Most any two-way radio shop servicing Motorhead Radios can program it for you. A lot of amateurs like myself also have the stuff to do it. If you were close by me, I'd help you out for a six pack of diet pepsi... hey, not too bad.

The going rate for a two-way radio shop to re program a radio runs from about $25 to $35 max. More than that, they're sharks and I'd stay away from them.

cheers
skipp@pilot.ucdavis.edu

From: "Joe" <joeamp@mindspring.com>
Subject: Royal UPS screwjob

Part 1
Looks like UPS lost another one, a radio shipped from Wi.- to
Long Island
It has not been scanned since June 30 in CACH Illinois (Chicago processing hub).

"The phone call"
UPS: "sorry sir are you calling about the radio"
.....YES, how did you know is a radio ?
UPS: are you the shipper or receiver
.....Receiver
UPS: Please contact the shipper we have no further information, it was last scanned in Cach (Chicago processing hub) Illinois.
....You #@#$#%$% people lost another one on me ?
UPS: Let me give you my supervisor.

UPS Supervisor: Sorry sir contact the shipper he can request a tracer if its
2 days past the scheduled delivery date.
.....I have been calling you people since last week informing you it hasn't
been scanned anywhere requesting whats going on.

UPS Supervisor: Sorry sir I have no information you must contact the
sender.
.....Why "he didn't screw up" looks like "YOU PEOPLE DID", I have to get
back to work not sit watching for one of your stupid drivers to drop it off
at the
wrong house at the curb buy the trash cans.

UPS Supervisor: Sir I must get back to work also ....terminating
call

Part 2
I just caught the UPS driver dumping the radio at the bottom of the
driveway ...both 1st and inner box smashed like accordions, packing chips
flying all over, tape *over* tracking barcode, people looking on.

I run out "What the HELL is this" ....What happened here ?
Driver: All I can I can do sir is put " damaged box" into the computer.
.....Oh really why ask me, what the friggen hell is wrong with you !!
The whole box is destroyed and you had to think about making a damage note
of it ?

The radio's seems to work ok it was wrapped up in 1 inch foam rubber.
The sender did a great job packing
.....ALL BE WARNED

Part 3
After noting a damaged rear fan the UPS websight says "left with and
signed for by man at address" and no mention of damaged
box into the computer.
..........Also I did not sign anything, the driver took off quick when I
asked him to wait wile I check the damage.
"Must have been that 15 inch machete I got to open the rest of the
box"..... Hee Hee

Hi:

Please tell me about the Eldico SBA-1. Is that a Collins like receiver?
What is the physical condition? How much do you want for it? I have a
friend in Cheyenne, Wyo. who could pick it up.

Thanks, Colin K7FM

Greetings, is there anyone out there that can supply my with some info on a Northern Radio type # 735. I aquired this radio a few weeks ago and would like to restore it but I have no schematic or any other info on this rig. The radio a 5 in apearance inside and out but does work. The radio was extensively modified for some reason and I would like to return it to stock as much as possible. Any info would be helpful..... Thanks and 73..

Craig

1579. Warning! -- SONY SUBSTANDARD SERVICE

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-08 00:00:00 UTC
From: An_American_Consumer@kgtr.net
Message-ID: <AF5F4E66031C.dkyir@nfagar.org>
Source record: 64334

Anyone considering the purchase of a Sony peripheral for their computer
might want to give it some further thought. There clearly is not a
reciprocal relationship between what they sell and what they service.
-
I purchased a CD-RW drive back in April that just recently went bad
(won't read). When I called Sony service, I was told that I could not
get a replacement and that I had to ship it across the country to be
"repaired" (and we all know what that means...) - with a three (3) week
turnaround. Assuming that they keep their 3-week commitment, with
shipping both ways, I'd be without the use of the unit for at least
five weeks!!!
-
I hardly think that's reasonable or fair.
-
Compare this to HP, who under the same circumstances would simply ship
you out a replacement unit and issue a call-tag for the old one.
-
Sony is a behemoth in the marketplace and as such, they have an
obligation to scale their service facilities to meet demand. To not do
so is an indication of their lack of commitment to customer satisfaction
and an unwillingness to stand behind their products.
-
Buyer be ware!
-

What you'd probably end up with would be one more NG for the cross posting.
With 4 established groups, people would just add the new one to the list.

What happens is that people want to hit any crowd that might be interested
in their equipment. Or any group that might have the equipment in which they
are interested.

I'm answering this post on "boatanchors", I most likely will not even see
any remarks on any of the other newsgroups to which you've posted. So,
cross posting does have some disadvantages.

Subject: Cleaning up old Heathkits?

What do you all recommend to clean up/polish etc. old Heathkits? I just
got an Apache (TX-1) and Mohawk (RX-1) circa 1959 in really nice shape.
This is the era where the knobs were not glossy/shiny as in later
versions according to Chuck Penson author of the Heathkit book. Jim

Subject: FS: Box of 17 ARC-5 Variable Capacitors

Hello Folks,

A few months back, I offered some variable capacitors for sale, and made a deal with someone for 17 of them. Unfortunately, through no fault of his own, he was unable to complete the deal. However, I packed them up for shipping while waiting, and they've been sitting in the box ready to ship for almost four months now.

So here's the deal: I'm offering the entire lot of 17 capacitors for $30 plus shipping from 19087 - that's an average price of less than $2 each. Of course some are more valuable than others, and condition varies from excellent to poor. (I just don't want to have to unpack and repack them all over again).

Here's a detailed list:

Oscillator tuning capacitor #5032 (from ARC-5 transmitter) - Single section variable, 30-150 pF. 16 rotor and 16 stator plates, .0625" spacing. Has beautiful 100:1 reduction gearing with antibacklash gears, but no dial. 2-5/8" high, 4" wide, 2-3/4" deep, with 3/16" shaft. Used, good to very good condition. Total of 5 of these, 3 with the flexible coupling shaft, 2 without.

Oscillator padding capacitor #4990 (from BC-459 transmitter) - Single section variable, as used in Command set transmitters. Has rotor lock and temperature compensator. Very good condition. Have 4 of these, all from BC-459s.

Oscillator padding capacitor #4990 (from ARC-5 transmitters) - Single section variable, as used in various Command set transmitters. No rotor lock. Fair to poor condition, need cleaning. Have 2 of these.

Amplifier padding capacitor (from ARC-5 transmitters) - Single section variable, as used in various Command set transmitters. With rotor lock. Very good condition. Have 1 of these.

Amplifier padding capacitor (from ARC-5 transmitters) - Single section variable, as used in various Command set transmitters. No rotor lock. Good condition. Have 1 of these.

Amplifier padding capacitor (from ARC-5 transmitters) - Single section variable, as used in various Command set transmitters. No rotor lock. Fair to poor condition. Have 3 of these.

3-gang main tuning capacitor from BC-453 receiver. Has padders and trimmers, no dial. Good condition. Have 1 of these.

Total weight of package 22 pounds. 17 capacitors in all. All packed up and ready to go - but you gotta take the whole pile!.

From: radioupuranus@aol.com (RadioUpUranus)
Subject: Jimmy NO'Brain makes friends at the FCC

FCC Amateur Radio Enforcement Log
July 6, 2000
HIRAM, GA: The FCC on June 28, 2000, sent a Warning Notice to General licensee James V. O'Brien III, W4AMP, and a Notice of Intent to designate O'Brien's Amateur Radio station license for a revocation hearing and his operator license for suspension for the remainder of its term. FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth said monitoring information before the Commission dating from January of this year indicates that the licensee is "seriously misinformed about the basis and purpose" of Amateur Radio and about the FCC's enforcement of the prohibition against obscene or indecent transmissions. The FCC alleges the offending transmissions took place on 3894.5 kHz, 144.35 MHz and 223.5 MHz. Hollingsworth said if the alleged operation recurs, the FCC would designate W4AMP for a revocation hearing and O'Brien's General license for suspension. Hollingsworth noted that the FCC's rules prohibit transmitting obscene or indecent words or language and that, for indecency purposes, the FCC uses the same standard for commercial and amateur transmissions. "Obscene speech is not protected by the First Amendment and cannot be broadcast at any time," Hollingsworth said in the letter, which also defined and detailed the proscriptions against indecent and obscene transmissions. In a lengthy e-mail response to Hollingsworth that he shared with the ARRL and others, O'Brien vigorously denied making any obscene transmissions. He said he keeps a "complete and accurate log" of his radio operations and would "gladly submit it for inspection." Additionally, O'Brien said, he has not operated on 3894.5 kHz at all this year. He suggested that any profanity monitored on the two VHF frequencies cited by the FCC was directed at him by an ex-FCC employee who, O'Brien asserted, has been harassing him for more than four years. O'Brien pledged to operate "in full accordance" with FCC rules. He also requested that the FCC provide any recordings, log information, and FCC monitoring information it has regarding the present allegations.

I've been using USPS for anything less than 5 lbs since their 2 day priority is CHEAPER than UPS 3 day, sometimes HALF the price! I havn't yet looked to see where the break even point is, but UPS is cheaper for very heavy packages. For very light packages USPS 2 day is cheaper or only cents more than UPS ground!

I had an 80 lb laser printer delivered by UPS with the box smashed and peanuts leaking out. The printer was well packed so it was not damaged, although the lid of the paper tray was pulverized! I managed to put humpty dumpty back together again with lots of scotch tape, after the buy sent me a replacement. Maybe I learned something from this before I shipped a Kenwood 2KW linear via ups from FL to CA. I double boxed the sucker, used lots of bubble pack, foam, tape and peanuts. My buyer reported it arrived un scratched! I tried to duplicate the packing as shown in the manual, and go one better. I also used a VERY heavy box 'stolen' from work (used to ship heavy lab equipment). I also put the tubes in a separate box! Somehow the two parcels arrived together! UPS said it had to be well packed because they have had them fall off 2 story high converer belts! (WHY NO NET?)

From: "Roger Halstead" <rdhalste@tm.net>
Subject: Royal UPS screwjob

Speaking of UPS and damaged equipment.

This has nothing to do with UPS, but with handling equipment.

I had taken an early flight out of Boston to Chicago O'Hare (ORD), on my way to Midland Michigan (MBS). Yah, it is kinda the long way around and had I been one seat farther back in that DC-9, I'd have had a private room. We didn't even have a window that far back. All you could see from the next row forward was the engine nacelle.

As I sat there at O'Hare, killing a weekend that afternoon, watching them load baggage, I spotted a handler grab a guitar case from the cart and throw it up onto the conveyor in the middle of torrential rain.

The bright markings on the case identified it as mine.<sigh>
Thing is when he threw the case up on the conveyor, he missed.
The case just kinda bounced off and kept going and landed about 15 feet the other side of the conveyor.

Sure was a good thing that was a hard shell case. It only scraped up one corner pretty bad, but the Guitar was not hurt and it was still dry.

As to UPS, my daughter who has a business has switched to Fed X

Subject: Tired of reading posts three times or more ??

What you'd probably end up with would be one more NG for the cross posting.
With 4 established groups, people would just add the new one to the list.

What happens is that people want to hit any crowd that might be interested
in their equipment. Or any group that might have the equipment in which they
are interested.

I'm answering this post on "boatanchors", I most likely will not even see
any remarks on any of the other newsgroups to which you've posted. So,
cross posting does have some disadvantages.

Subject: Tired of reading posts three times or more ??

Suggestion:
If you are tired of it, READ ONE LIST, or don't read any of them!.
ps: How much are you contibuting in cash to have the list run your way?

Now that I have been informed as to how newsgroups work I retract my
suggestion and please lets not have a fourth newsgroup.

Thanks
Ron

WA0KDS <WA0KDS@mcipnet.com> wrote:
>I am getting tired of reading posts three times, Are you?

One solution is to get a news reader that is smart enough to delete
crossposts that you have already read. Agent is such a reader but it
will cost you a few bucks.

From: Will <wcwhite@mindspring.com>
Subject: Tired of reading posts three times or more ??

Get a better newsreader. In Both Netscape News and Newswatcher once a
message is read in one group, it is marked as read in the other groups
it is cross-posted to (and doesn't appear, if you have your preferenes
set that way).

Subject: Warning! -- SONY SUBSTANDARD SERVICE

Anyone considering the purchase of a Sony peripheral for their computer might want to give it some further thought. There clearly is not a reciprocal relationship between what they sell and what they service.
-
I purchased a CD-RW drive back in April that just recently went bad (won't read). When I called Sony service, I was told that I could not get a replacement and that I had to ship it across the country to be "repaired" (and we all know what that means...) - with a three (3) week turnaround. Assuming that they keep their 3-week commitment, with shipping both ways, I'd be without the use of the unit for at least five weeks!!!
-
I hardly think that's reasonable or fair.
-
Compare this to HP, who under the same circumstances would simply ship you out a replacement unit and issue a call-tag for the old one.
-
Sony is a behemoth in the marketplace and as such, they have an obligation to scale their service facilities to meet demand. To not do so is an indication of their lack of commitment to customer satisfaction and an unwillingness to stand behind their products.

From: "Bob"
Subject: FS: Small Lambda 28VDC/5.7Amp Power Supply

For Sale: A Lambda model LRS-53-28 fully enclosed 28 VDC at 5.7 ampere (at 40 degrees c) power supply. In excellent condition. still has warranty seals on the case. Has +/- 5 percent adjustment. Also has optional remote sensing to guarantee the correct voltage arrives at the load. All connections via a barrier terminal strip on one end of the unit. Weighs 3 pounds. Size is 8 1/2 by 4 3/4 by 1 3/4 inches L W H. Great for the medium power FET RF amp or small surplus radio loads. All input/output terms are silkscreened on the case. Typical Lambda "Battleship" construction despite small size and weight. $65 post paid conus.

tnx for the read.

From: "Marc Hildebrant"
Subject: Heath AT-1 questions

Hello Group,
I recently pulled my AT-1 down from the attic for a look see. The unit is complete, but it needs a good cleaning and fixup. The radio was built well, but someone came in later and messed around some. Different soldering techniques showing. Also, the selector wafer for the meter is broken.

Questions,

1. I have the QST mods by Lew McCoy to increase power, should I?
2. Is the quality of the CW good enough to make the fix up worthwhile?
3. Any other mods worthwhile for this rig?

Marc

Subject: LAST DAY! FA: Gonset GC-105 2 Meter Communicator

I have a nice 1950's-1960's vintage Gonset GC-105 Collectible 2 Meter Communicator (Transmitter/Receiver) for auction. This receives and transmits within the 2 meter band. It has a built-in power supply, and even a Ameco PV Preamp! This is the LAST DAY and there is no reserve! It is going CHEAP! Please visit:

From: radiotek@pacbell.net (MAG Electronics)
Subject: LAST DAY! FA: Multi-Elmac PSR-612 Power Supply for PMR-6/7/8

I have a nice Multi-Elmac High Voltage 6/12VDC Input Power Supply for the PMR-6/7/8 for auction. This power supply takes 6/12 VDC input and the output would be the voltages needed to power up the radio. I would say that these voltages would be: 6, 75-125, 250-350 and possibly 700-900 volts. So, this may be used for the PMR-6/7/8 or for powering up a different radio that requires those types of voltages. This is the LAST DAY and there is no reserve! I would say that this was made in the 1950's-1960's era.

Subject: Mackay Radio Model 138A, c. 1945 - questions

Now here's a rare one, I do believe. I have never heard of these
before and would like to communicate with anyone familiar with this
beast as I have a couple of questions about it. It is a 10-tube single
conversion with one RF stage, 3 i.f. stages, and an elaboratly
filtered AC/DC power supply, built by Federal Telephone & Radio Corp.
of Newark, NJ in 1945. I was fortunate enough to find this for $15.00
(!!!!) at a swap meet, along with the original mimeographed
operating/service manual. Construction is very impressive. I have
almost finished the electrical repairs (90% of caps bad!) and hope to
finish it over this holiday weekend. Would love to hear from anyone
who has one or has used one.

I have a 5v ct 30 amp filament transformer that was going to be used in a homebrew amp using a pair of 4-400's so it might work for you. It is in a potted rectangular can, mounts to chassis with four studs. The transformer actually has 3 5v 10a ct windings that can be connected in parallel. It has a multi-tap primary . I don't know what the maximum primary voltage is, when I got it it was set up for 120v. If you need to set the amp up for 240 volts the maximum voltage tap might work. If you are interrested I'll dig the transformer out of the junk box and see what the ratio is at the highest taps to tell if it will actually work on 240 volts. It is a well made transformer, possibly mil spec, though not a drop in replacement for the sb220. You might have to drill some new holes, make brackets, etc. I would let it go for $50 plus shipping. Let me know and I'll test it for possible 240v operation and get back to you.

From: Jim Roik <jnroik@escape.ca>
Message-ID: <Od7a5.2902$Rz1.8224@news1.mts.net>
Source record: 64204

Hi Jim.

When I did my Apache I did not want to modify it by drilling holes but I did want to go to a three wire plug. What I did was to use a minibox in which I mounted the fuse and brought in the three wire cord. I then ran the 120 V and the ground to the Apache. The 120 went to where the original connections were and the ground went to the chassis. I'm not using the original plug but feel a lot safer.

Good luck.

Jim

I have for sale a Daiwa CN-620 Power & SWR Meter.......This is the one with the cross needle meters......It covers 1.8-150 Mhz and max. power is 2KW.......I do have the manual and its in excellent shape........I will sell it for $75 plus shipping and can be reached at (508) 821-2993 or e-mail........WZ1U Steve / Lakeville, Ma.

1608. FS: Collins 75A-2 with 270G2 Speaker

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-09 00:00:00 UTC
From: Ron Eisenbrey <ab5wg@alltel.net>
Message-ID: <8kb1b4mtl1@news1.alltel.net>
Source record: 64213

I have a restored A2 and matching speaker that needs a new home. It is just too big for the available room remaining in the shack. This receiver has all new electrolytic caps, a new metal can dual section electrolytic was put in the B+. All of the "black beauty" caps were replaced with modern caps. All resistors out of spec were replaced. All pots cleaned and lubricated, chassis received a thorough cleaning. All linkages, shafts, gears and bushings lubricated. A new drum dial was installed.

This is a late model A2, uses the 6CB6 RF amp and the 6BA7 mixers. This receiver has a crystal calibrator installed. Front panel is excellent and original, cabinet has been touched up. All knobs are original and none are broken. This receiver is not a collector's set but is a very excellent everyday user set. I would rate the overall condition as a 8.9 and you will find no dust or crud inside this set.

Receives AM very well but does not do well on SSB (It was not the intent of the Collins designers to make this receiver for SSB). The only thing that is not original on the chassis are three RCA phone plugs which were added to the rear panel. I left these installed although there is no wiring hooked to them. I believe a past owner may have used these jacks for an external product detector for SSB. These can be easily removed and plugged if desired.

Instruction manual with fold out schematic included. $950 for receiver and speaker plus shipping from 77478. I will not separate the receiver and speaker.

Thanks,

Ron, AB5WG

1609. NEARC Meet in Nashua, NH on July 15

Newsgroup: rec.radio.amateur.boatanchors

If you live in the New England area don't forget to attend the New England
Antique Radio Club meet coming Saturday July 15 in Nashua, NH.

The meet runs from 8am to 1pm

Table setup 7:30, $15 per table. For reservations call Joe Coco at:
617-923-2665.

Contest categories: Cathedrals and Midget Radio's. Contest starts at 9:15am

Admission:

7:30-8am $15
8am-9am $5
9am-1pm $1

Directions:

Resurrection Center
449 Broad Street
Nashua, NH

Route 3 (Everett Turnpike) to Exit 6.
1 1/2 miles West on Route 130.
Resurrection Center is on your right.
Meet is in the Gym behind the new Church.

Bring your friends!

Why not post this question to alt.tv.mash? one of the shows producers
hangs around sometimes and can answer a lot of questions about the show.

The audio output xformer is also a high-failure item. Mine (an FRR-23)
is still working OK but has had a number of caps and the audio xformer
replaced. Keep those pencil tubes!! They're getting a bit harder to
find.

Hi Ron, good luck on selling the receiver. The speakers are going for alot of money. It's a shame you put so much work into the receiver and now are selling it. Are you keeping the 75S-1? Ever try Drake? You might like. You need to rent radios from me before spending a lot when buying. 73, Paul

1616. FS: Russian LB radio - 6M dash mount

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-09 00:00:00 UTC
From: Chris <cvierno@netzero.net>
Message-ID: <8k8ggt$8s$1@nnrp1.deja.com>
Source record: 64257

New working Russian LB set with all accessories & cables except antenna rod. 1 channel on 41.30 Mhz, range 33-57.5 Mhz with some component changes. Has telset style mic/earphone, ext speaker. and 1450 Hz signalling which blasts audio wide open when enabled(?) or normal noise squelch. Model 'LEN-V 1P21V' about 10x10x2.4", in a cast aluminum case (real solid). 12V supply, TX about 10 watts, RX sensitivity (12dB SINAD) was about 0.2 uV, although the manual's spec is 1.0 uV.
A copy of the manual is included, but it's in Russian, the parts lists & schematic are self-explanatory. Apparently made for hose&gun (NKVD?) service as the book shows installations in Gaz 24 / 69 and a K-700 tractor. You can be the first and ONLY to have one on 6M! Real clean layout inside, lots of room and QC paint dots. Email for pix.
$175 + shipping

Chris

What do you all recommend to clean up/polish etc. old Heathkits? I just got an Apache (TX-1) and Mohawk (RX-1) circa 1959 in really nice shape. This is the era where the knobs were not glossy/shiny as in later versions according to Chuck Penson author of the Heathkit book. Jim

What is the best way to ground these old guys? The Apache has two fuses in the plug. I have an Apache and Mohawk from 1959. I've been out of the loop for years (getting back into amateur radio since leaving it as a teenager in 1967). Man I forgot how heavy these old transmitters were. The Apache alone weighs in at 109 lbs.!!!! Jim

FCC Amateur Radio Enforcement Log
July 6, 2000
HIRAM, GA: The FCC on June 28, 2000, sent a Warning Notice to General licensee James V. O'Brien III, W4AMP, and a Notice of Intent to designate O'Brien's Amateur Radio station license for a revocation hearing and his operator license for suspension for the remainder of its term. FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth said monitoring information before the Commission dating from January of this year indicates that the licensee is "seriously misinformed about the basis and purpose" of Amateur Radio and about the FCC's enforcement of the prohibition against obscene or indecent transmissions. The FCC alleges the offending transmissions took place on 3894.5 kHz, 144.35 MHz and 223.5 MHz. Hollingsworth said if the alleged operation recurs, the FCC would designate W4AMP for a revocation hearing and O'Brien's General license for suspension. Hollingsworth noted that the FCC's rules prohibit transmitting obscene or indecent words or language and that, for indecency purposes, the FCC uses the same standard for commercial and amateur transmissions. "Obscene speech is not protected by the First Amendment and cannot be broadcast at any time," Hollingsworth said in the letter, which also defined and detailed the proscriptions against indecent and obscene transmissions. In a lengthy e-mail response to Hollingsworth that he shared with the ARRL and others, O'Brien vigorously denied making any obscene transmissions. He said he keeps a "complete and accurate log" of his radio operations and would "gladly submit it for inspection." Additionally, O'Brien said, he has not operated on 3894.5 kHz at all this year. He suggested that any profanity monitored on the two VHF frequencies cited by the FCC was directed at him by an ex-FCC employee who, O'Brien asserted, has been harassing him for more than four years. O'Brien pledged to operate "in full accordance" with FCC rules. He also requested that the FCC provide any recordings, log information, and FCC monitoring information it has regarding the present allegations.

Speaking of UPS and damaged equipment.

This has nothing to do with UPS, but with handling equipment.

I had taken an early flight out of Boston to Chicago O'Hare (ORD), on my way to Midland Michigan (MBS). Yah, it is kinda the long way around and had I been one seat farther back in that DC-9, I'd have had a private room. We didn't even have a window that far back. All you could see from the next row forward was the engine nacelle.

As I sat there at O'Hare, killing a weekend that afternoon, watching them load baggage, I spotted a handler grab a guitar case from the cart and throw it up onto the conveyor in the middle of torrential rain.

The bright markings on the case identified it as mine.<sigh>
Thing is when he threw the case up on the conveyor, he missed.
The case just kinda bounced off and kept going and landed about 15 feet the other side of the conveyor.

Sure was a good thing that was a hard shell case. It only scraped up one corner pretty bad, but the Guitar was not hurt and it was still dry.

As to UPS, my daughter who has a business has switched to Fed X

Cross-posted to: alt.audio.equipment,alt.radio.amateur.club.taparc,alt.radio.broadcasting,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.swap

Hi! my name is Eris,I am selling this inventory of vacuum tubes
for an older lady wcich her husband passed away,there are
between 3000 to 4000 tubes which 75% of them are NIB or NOS
they are mostly receiving,audio and some transmitting tubes.It would
be too long to make a list.This fellow had is own business in
electronic
and was specializing in tubes equipment.
Asking $700.00 US firm
plus shipping.
If interested feel free to email
me...Thanks....73

My local Radio Shack has a nice little wood case 4" speaker (all black) on sale
for under $10. looks real professional.
Hooked to my Icom R-71 it sounds far better than the internal one.
Should work with any radio; I plan to buy more to hook to other sets and just
line them up on a shelf. Size is 5"x5"x5" and sounds good on music too.
Model number is 40-1991 and is on page 132 of new catalog. Might be able to
order by mail/phone...I don't know

Source record: 64273

Trying to thin out a few pieces I just don't use and since I have
a very nice SX-42, my SX-62A (essentially the same radio electrically)
is being offered for sale.
Works on all bands, has had some but not all tubular caps replaced,
and could probably use an alignment.
Cosmetically.....excellent front panel, excellent dial and glass, all knobs
correct and lettering excellent.
Cabinet has typical scratches but not bad...I would not be inclined to
repaint
it if I kept it.
With manual. Price $275
Would prefer not to ship but will do so at your expense....can meet someone
within a reasonable distance of Atlanta. Estimate of shipping weight would
be 65lbs from 30178.

Tnx and 73 !

>>

Well, no. There would be radio links at "higher" HQs. There just wouldn't
likely be radio links at the unit level, i.e. at the 4077th MASH.

They would have tactical radios, but they wouldn't be connected to the
phone system.

A typical scenario would be: A person picks up a field phone at a unit and
cranks it. The unit switchboard (a small one) would answer the ring and
patch the call to the Battalion switchboard (a bigger one). The link from
the unit to Battalion is most likely wire. The Battalion operator would
patch the call to a higher HQ, such as Corp or Army. This link could be
either wire or radio depending on the situation. At this point, the call
would go by radio state side. Once state side, the call would get patched
into the commercial phone system and dialed by the state side operator.

That's for an "official" call from the field phone to a state side
commercial
phone.

Personal calls via the MARS ham system are different.

You would go to the MARS shack and you would be directly talking into a radio with the MARS operator handling the controls. Small units usually didn't have a MARS station unless there just happened to be some motivated hams in the unit and some equipment available to them. In larger, battalion and above, units there would likely be an officially supported MARS station.

Keep in mind MASH is a TV show. If it were reality, they would have a First Sargent doing most of the stuff Radar and the CO were doing. You ever see mention of a First Sargent on MASH?

What do you all recommend to clean up/polish etc. old Heathkits? I just got an Apache (TX-1) and Mohawk (RX-1) circa 1959 in really nice shape. This is the era where the knobs were not glossy/shiny as in later versions according to Chuck Penson author of the Heathkit book. Jim

From: n2ey@aol.com (N2EY)
Subject: FS: Box of 17 ARC-5 Variable Capacitors

Hello Folks,

A few months back, I offered some variable capacitors for sale, and made a deal
with someone for 17 of them. Unfortunately, through no fault of his own, he was
unable to complete the deal. However, I packed them up for shipping while
waiting, and they've been sitting in the box ready to ship for almost four
months now.

So here's the deal: I'm offering the entire lot of 17 capacitors for $30 plus
shipping from 19087 - that's an average price of less than $2 each. Of course
some are more valuable than others, and condition varies from excellent to
poor. (I just don't want to have to unpack and repack them all over again).

Here's a detailed list:

Oscillator tuning capacitor #5032 (from ARC-5 transmitter) - Single section variable, 30-150 pF. 16 rotor and 16 stator plates, .0625" spacing. Has beautiful 100:1 reduction gearing with antibacklash gears, but no dial. 2-5/8"
high, 4" wide, 2-3/4" deep, with 3/16" shaft. Used, good to very good condition. Total of 5 of these, 3 with the flexible coupling shaft, 2 without.

Oscillator padding capacitor #4990 (from BC-459 transmitter) - Single section
variable, as used in Command set transmitters. Has rotor lock and temperature
compensator. Very good condition. Have 4 of these, all from BC-459s.

Oscillator padding capacitor #4990 (from ARC-5 transmitters) - Single section
variable, as used in various Command set transmitters. No rotor lock. Fair to
poor condition, need cleaning. Have 2 of these.

Amplifier padding capacitor (from ARC-5 transmitters) - Single section variable, as used in various Command set transmitters. With rotor lock. Very good condition. Have 1 of these.

Amplifier padding capacitor (from ARC-5 transmitters) - Single section variable, as used in various Command set transmitters. No rotor lock. Good condition. Have 1 of these.

Amplifier padding capacitor (from ARC-5 transmitters) - Single section variable, as used in various Command set transmitters. No rotor lock. Fair to
poor condition. Have 3 of these.

3-gang main tuning capacitor from BC-453 receiver. Has padders and trimmers, no
dial. Good condition. Have 1 of these.

Total weight of package 22 pounds. 17 capacitors in all. All packed up and ready to go - but you gotta take the whole pile!.

From: Chris <cvierno@netzero.net>
Subject: FS: Russian LB radio - 6M dash mount

New working Russian LB set with all accessories & cables except antenna rod. 1 channel on 41.30 Mhz, range 33-57.5 Mhz with some component changes. Has telset style mic/earphone, ext speaker. and 1450 Hz signalling which blasts audio wide open when enabled(?) or normal noise squelch. Model 'LEN-V 1P21V' about 10x10x2.4", in a cast aluminum case (real solid). 12V supply, TX about 10 watts, RX sensitivity (12dB SINAD) was about 0.2 uV, although the manual's spec is 1.0 uV.
A copy of the manual is included, but it's in Russian, the parts lists & schematic are self-explanatory. Apparently made for hose&gun (NKVD?) service as the book shows installations in Gaz 24 / 69 and a K-700 tractor. You can be the first and ONLY to have one on 6M! Real clean layout inside, lots of room and QC paint dots. Email for pix.

From: radioupuranus@aol.com (RadioUpUranus)
Subject: Jimmy NO'Brain makes friends at the FCC

FCC Amateur Radio Enforcement Log
July 6, 2000
HIRAM, GA: The FCC on June 28, 2000, sent a Warning Notice to General
licensee
James V. O'Brien III, W4AMP, and a Notice of Intent to designate O'Brien's
Amateur Radio station license for a revocation hearing and his operator
license
for suspension for the remainder of its term. FCC Special Counsel for
Amateur
Radio Enforcement Riley Hollingsworth said monitoring information before the
Commission dating from January of this year indicates that the licensee is
"seriously misinformed about the basis and purpose" of Amateur Radio and

about
the FCC's enforcement of the prohibition against obscene or indecent
transmissions. The FCC alleges the offending transmissions took place on
3894.5
kHz, 144.35 MHz and 223.5 MHz. Hollingsworth said if the alleged operation
recurs, the FCC would designate W4AMP for a revocation hearing and O'Brien's
General license for suspension. Hollingsworth noted that the FCC's rules
prohibit transmitting obscene or indecent words or language and that, for
indecency purposes, the FCC uses the same standard for commercial and
amateur
transmissions. "Obscene speech is not protected by the First Amendment and
cannot be broadcast at any time," Hollingsworth said in the letter, which
also
defined and detailed the proscriptions against indecent and obscene
transmissions. In a lengthy e-mail response to Hollingsworth that he shared
with the ARRL and others, O'Brien vigorously denied making any obscene
transmissions. He said he keeps a "complete and accurate log" of his radio
operations and would "gladly submit it for inspection." Additionally,
O'Brien
said, he has not operated on 3894.5 kHz at all this year. He suggested that
any
profanity monitored on the two VHF frequencies cited by the FCC was directed
at
him by an ex-FCC employee who, O'Brien asserted, has been harassing him for
more than four years. O'Brien pledged to operate "in full accordance" with
FCC
rules. He also requested that the FCC provide any recordings, log
information,
and FCC monitoring information it has regarding the present allegations.

I've been using USPS for anything less than 5 lbs since their 2 day priority is
CHEAPER than UPS 3 day, sometimes HALF the price! I havn't yet looked to see
where the break even point is, but UPS is cheaper for very heavy packages. For
very light packages USPS 2 day is cheaper or only cents more than UPS ground!

I had an 80 lb laser printer delivered by UPS with the box smashed and peanuts
leaking out. The printer was well packed so it was not damaged, although the
lid of the paper tray was pulverized! I managed to put humpty dumpty back
together again with lots of scotch tape, after the buy sent me a replacement.
Maybe I learned something from this before I shipped a Kenwood 2KW linear via
ups from FL to CA. I double boxed the sucker, used lots of bubble pack, foam,
tape and peanuts. My buyer reported it arrived un scratched! I tried to
duplicate the packing as shown in the manual, and go one better. I also used a
VERY heavy box 'stolen' from work (used to ship heavy lab equipment). I also
put the tubes in a separate box! Somehow the two parcels arrived together!
UPS said it had to be well packed because they have had them fall off 2 story
high converer belts! (WHY NO NET?)

Subject: Royal UPS screwjob

Speaking of UPS and damaged equipment.

This has nothing to do with UPS, but with handling equipment.

I had taken an early flight out of Boston to Chicago O'Hare (ORD), on my way
to Midland Michigan (MBS). Yah, it is kinda the long way around and had I
been one seat farther back in that DC-9, I'd have had a private room. We
didn't even have a window that far back. All you could see from the next
row forward was the engine nacelle.

As I sat there at O'Hare, killing a weekend that afternoon, watching them
load baggage, I spotted a handler grab a guitar case from the cart and throw
it up onto the conveyor in the middle of torrential rain.

The bright markings on the case identified it as mine.<sigh>
Thing is when he threw the case up on the conveyor, he missed.
The case just kinda bounced off and kept going and landed about 15 feet the
other side of the conveyor.

Sure was a good thing that was a hard shell case. It only scraped up one
corner pretty bad, but the Guitar was not hurt and it was still dry.

As to UPS, my daughter who has a business has switched to Fed X

Hello fellow Swan Two-Drifty Owner,
I've owned aone of the above radios for about 6 years now and the manual
says
not to do what you did whilist keying the radio. Why? I don't honestly know.
I do enjoy operating my Swan though and you should get an honest 125 watts
or
so output with a fresh pair of 6146-B's.
73 and good luck.

Subject: Tired of reading posts three times or more ??

I am getting tired of reading posts three times, Are you? I think that
maybe it is time to merge the:

rec.radio.amateur.equipment
rec.radio amateur.boatanchors
rec.radio.swap

into one group and call it something like:

rec.radio.amateur.forsale

Any comments and how does one go about getting this done if there is a
general feeling of why not. Sane comments only please.

What you'd probably end up with would be one more NG for the cross posting.
With 4 established groups, people would just add the new one to the list.

What happens is that people want to hit any crowd that might be interested
in their equipment. Or any group that might have the equipment in which they
are interested.

I'm answering this post on "boatanchors", I most likely will not even see
any remarks on any of the other newsgroups to which you've posted. So,
cross posting does have some disadvantages.

One solution is to get a news reader that is smart enough to delete
crossposts that you have already read. Agent is such a reader but it
will cost you a few bucks.

Get a better newsreader. In Both Netscape News and Newswatcher once a
message is read in one group, it is marked as read in the other groups
it is cross-posted to (and doesn't appear, if you have your preferenes
set that way).

Subject: Warning! -- SONY SUBSTANDARD SERVICE

Anyone considering the purchase of a Sony peripheral for their computer might want to give it some further thought. There clearly is not a reciprocal relationship between what they sell and what they service.
-
I purchased a CD-RW drive back in April that just recently went bad (won't read). When I called Sony service, I was told that I could not get a replacement and that I had to ship it across the country to be "repaired" (and we all know what that means...) - with a three (3) week turnaround. Assuming that they keep their 3-week commitment, with shipping both ways, I'd be without the use of the unit for at least five weeks!!!
-
I hardly think that's reasonable or fair.
-
Compare this to HP, who under the same circumstances would simply ship you out a replacement unit and issue a call-tag for the old one.
-
Sony is a behemoth in the marketplace and as such, they have an obligation to scale their service facilities to meet demand. To not do so is an indication of their lack of commitment to customer satisfaction and an unwillingness to stand behind their products.

This switch controls where the metering circuit is sampling. In the output position, you will measure relative output power. In the CATH position, you will be measuring Cathode current of the 6146B tubes. I didn't see anywhere in the book where switching the switch during transmit would cause problems. In looking at the schematic the cathode of the 6146's are fed to ground through a pair of 1-ohm resistors; the meter, through the switch selector, is placed across the 1-ohm pair with a 180-ohm in series with meter. All that to say that it wouldn't significantly change the value of two 1-ohm reisistors in parallel to ground. In my opinion you should look for another reason for blowing the tubes.

1635. FRR-22 help needed

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-09 00:00:00 UTC
From: Ron in NC <kc4yoy@pop.trellis.net>
Message-ID: <01bfe958$8c46b060$404996d0@ron>
Source record: 64276

HI Gang,

We attended the Salisbury HamFest yesterday and like many
times before this small fest yielded several good finds.
There were a good number of BA's there and a nice looking
AN/FRR-22 followed me home, plus a stack of back issues
of "Electric Radio". Along with the FRR-22 came a full set of
the hard to find pencil tubes and some tech data for it.

The FRR-22 looks to be in very nice original condx.
When I tried to fire it up after getting it back home
and past the approving eyes of the XYL, I was surprised
to have it trip the circuit breaker when I plugged it in.
After taking it apart and checking everything and finding
no problems I remembered that the outlet I was plugging it into
was on a GFI circuit and so I tried it on a regular outlet and
it powered up without tripping the breaker.
The only problem I've found so far is that the audio output
is low and muddy sounding on AM (A1) but loud and clear
on SSB/CW (A3). Does anyone in the group have experience
with this radio and can give me some advice as to where
to this problem may be coming form?
Also does anyone have a spare gray Navy speaker that
would be correct for this receiver?

Thanks in advance for your help.

73,

Ron

Hi Ron,

I think this is the same as an SRR-12. Does it have a really exotic dial mechanism that uses a mirror?

Still have a couple of those in service.

Those were designed for shipboard power which was balanced above ground. There are filters connected from each side of the line to ground. Current thru one of these to ground is what caused your GFI to get upset. I run mine with an isolation transformer and use a couple of light bulbs in series with the 'centre-tap' connected to ground.

The bellcranks that move all the bandswitch and IF switchery is a big problem with these.

Capacitors are a problem too. That's possibly why your AM is muddy. The signal path that occurs in AM is different than the one that occurs when the BFO is used.

I have the mother of all manuals for this thing. Write further and we'll talk.

Yes, the FRR-22 is the shore station version of the shipboard SRR-12.

>
> Still have a couple of those in service.

Where are they being used?

>

That's what I figured was the cause of the trip.

>

Since this thing is all modules maybe I can figure out which one is the
cause, I feel very lucky to have gotten a full set of tubes with it.

>

The only thing I see that does this is to set the reader to "delete Messages
when read" and I don't want to delete them, just not show them.

I have it set not to show read messages, but the ones in other newsgroups
still show.

> Walt (N4GL) --- boomer1@hitter.net ---

1n2422 = 500v PIV, 1.2v forward drop at 1.5A, si rect
1n1341A = 50v PIV 1.4v forward ay 6A, si rect, mot replacement = MR1120
1n1375A = si zener diode, 100vz 10w mot = 1n30005b
1n2976B = si zener diode, 12vz 10w

I have real old motorola book with a nice cross reference section.

From: p34901@hotmail.com
Subject: FS: Hallicrafters SR-150 /w SP-120

I have a Hallicrafters SR-150 transceiver with SP-120 external speaker/power supply. There are some problems (e.g. I do not get reception immediately upon power-on, but only after the radio warms up for a few minitues) which I am sure can be repaired easily by those who are familiar with this type of tube receiver. I have the original manuals with schematics. The overall cosmetic condition is good with exceptionally clean front face (no slightest scratch anywhere on front face). Some wear along the edges of the cabinet and one knob is dented slightly. A good restoration project. Asking $200 + shipping. An excellent SSB audio with no drift. If interested, E-mail me for JPEGs.

Sent via Deja.com http://www.deja.com/
Before you buy.

From: n2ey@aol.com (N2EY)
Subject: Parts and QSTs for Sale - 7/4/00 list

I have the following parts for sale. Too much stuff, not enough basement.
Shipping (from 19087) is not included. Prices shown are asking prices for
single units - let's make a deal! Discounts on quantity purchases. Shipping
weights are estimates - you pay only actual shipping charges.

Variable Capacitors

TCS Receiver capacitor/dial assembly - 3 section capacitor with 4" dial and
reduction drive (25 turns to cover range). 7" wide, 3-1/2" high, 3-1/2" deep.

1/4" shaft. Ceramic insulation, 2 sections 10-280 pf, 1 section 10-360 pf. Good condition. Price: $6 (4 lbs.)

Power Transformers (all have 117 V 50-60 Hz primary)

UTC S-41 power transformer. Upright, metal cased style with terminal board and solder lugs for connection. Secondaries: 1200 VCT @ 200 mA HV, 5 V @ 3 A rectifier filament, 7.5 V @ 3 A (tapped @ 6.3V) heater #1, 6.3 VCT @ 2A heater #2. Unused, like-new condition, terminals have never even been soldered to. Tested, works. Price $30 (10 lbs.)

Stancor PCR-300 power transformer. Upright, drawn cased style with leads. Secondaries: 550-370-75-0-75-370-550 (multiple taps on the same secondary) @ 300 mA HV, 5 V @ 6 A rectifier filament, 6.3 V @ 5 A heater #1, 6.3 VCT @ 1A heater #2. Used, good condition, leads have been identified and marked. Tested, works. Price $25 (20 lbs.)

UTC R-7 power transformer. Horizontal, "hole in the chassis" style with terminals. Secondaries: 700 VCT @ 100 mA(?) HV (current rating not marked, but at least 90 mA), 5 V @ 3 A rectifier filament, 2.5 V @ 8 A heater #1, 6.3/2.5 VCT @ 2A heater #2 (tapped so both voltages can be used). Used, dusty and a paint is scratched up, fair-to-good condition. Tested, works. Price $5 (5 lbs.)

Filament Transformers (all have 117 V 50-60 Hz primary)

Thordarson 6421 rectifier filament transformer. Antique upright style (from 1930s) with solder lugs for connection. Two independent secondaries: 5 V@ 3 A, 2.5 V @ 10.5 A. Used, tested, works, good condition. Price $3 (4 lbs.)

Isolation/Step Down/Variable Transformers

Stancor P-6383 - Primary is switch-selectable 210/230/250 V, secondary is 115 V. Rated 100 VA. Upright mounting, has built-in switch and 2 prong output socket. Can be reversed for step-up use. Used, tested, works, good condition. Price $4 (6 lbs.)

Superior Electric "Powerstat" variable autotransformer (similar to a Variac). Model 116-U. Input is 115V, output can be connected for 0-115V or 0-135V, continuously variable. Rated 7.5 A output. Open type, panel mounting with 3/8" shaft, no scale provided. Can be connected for CW or CCW rotation, instructions on terminal board cover. Used, tested, works, good condition. Price $25 (10 lbs.)

Meters

Meter from military I-166 multimeter. Round black bakelite case, white face with scales. 0-100 uA movement. Labeled "calibrated for use in steel panels". Price $5 (1 lb)

Tubes

5687 tubes - These are an industrial dual triode. Have at least two dozen, all test good in Hickock 6000A transconductance tester. Price $1 each, 6 for $5, 15 for $10.

QST

1926 - These are all duplicates from my collection. Old and worn, but good reading. $2 each, or all 5 for $8 (1 lb):

March, 1926 - 96 pages, both covers missing. Some pages stained. Poor-to-fair condition.

April, 1926 - 96 pages, both covers missing. Fair-to-good condition. Better than March issue

October 1926 - 96 pages, both covers present but loose. Good condition. Better than April issue.

November 1926 - 94 pages, front cover missing, rear cover loose. Poor-to fair condition, about equal to March issue.

December 1926 - 112 pages, both covers present, front cover loose. Good condition, almost as good as October issue.

Miscellaneous

Snap Switch - A real antique, surface mount switch meant for house lighting but perfect for antique-style power supply on wooden chassis. Rated 10 A @ 250 V. Round white ceramic base with snap-on brown bakelite cover. Screw terminals inside, wiring is done via holes in the base. 2-1/2" round, DPST with double-break contacts. NOS, excellent condition. Price $2 (1 lb).

Octal Wafer Sockets - Brown phenolic. Have 9 NOS, VGC, 1-5/16 mounting centers, 25 cents each. Also 3 used, GC, 1-1/2" mouning centers, one with pin 6 missing, 10 cents each or free with any order. $2 for all 12. (1 lb.)

Millen HV connectors. These are the classic Millen high voltage connectors. Male (cable) end only! Have one red, one black, used, color is faded but in good condition otherwise. 50 cents each. (1 lb.)

Sonalerts - Model SC 628 Sonalert device by P.R. Mallory. Require 6 to 28 VDC @ 3 to 14 mA. Produce 2500 Hz tone at 68-80 dB SPL. Unused, tested, working, very good condition. Have 3. Price $1 each (1 lb)

Control Box for Alliance Tenna-Rotor. Classic unit from early '50s - sloping front brown bakelite case with meter. Old, beat up, cracked and glued case, some parts missing - a real bottom-of-the-junkbox find. Transformer, meter and switch assembly good. Price 10 cents or free with any order. (2 lbs)

Code Practice Oscillator Module. CPO-4 made by Carl Conover & Co. Mineola, NY. Classic unit from the early '60s - "All American Made!" Consists of a small circuit board with two transistors, one resistor and one capacitor, to be hooked up to a soeaker, key and 1-1/2 volt battery. NOS, still in original plastic bag. Looks like something you'd find at Lafayette Radio in 1962. Price 10 cents or free with any order. (1 lb)

Please feel free to email with any questions, and to make an offer for some or all of this stuff. More to come, too.

7/400

I had one of these antennas and it has a very narrow bandwidth.
It also had a clear, plastic radome. I sold the documentation and
antenna together.

>Why do hams pre-judge and slander another like this title, with no knowledge
>of the facts?
"Little Jimmy" has been no stranger to the radio newsgroups. "This title" is merely reflective of his conduct hereabouts. A little trip down dejanews will illustrate his upstanding and well-mannered conduct here.

>This man is your brother.
Speak for yourself, pal.

>Many people are wrongly accused of many thigns in this life.
So? Your point is?

>This must be very inspiring to people thinking of entering the hobby
Oh, come on. Having a ham called to task for his actions should be very reassuring to anyone thinking of entering the hobby.

>and says much more about your character than his.
Well, since you're Little Jimmy's brother, that is more than we need to know about *your* character.

Come to think of it, your screen name seems more like one of little jimmy's sock puppets...

Note which way pins 1&4 are oriented in your amplifier and hold each of the tubes horizontally so that these pins are in the same plane. If the greater dimension of the plate is vertical then the tube may be safely used in this

position. The problem is that not all makers took care to glue the base on to the tube in the same position for every tube. The odds are, however that those sylvania 811's were actually made by RCA, in which case you have nothing to worry about. BTW are they 811 or 811A's. I think it's possible that only the 811A's were certified for horziontal operation. The problem is that of the hot filament saging and touching the grid, which won't happen if the filament wires are all in the same vertical plane.

1665. Tektronix selling price survey updated

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-10 00:00:00 UTC
From: "Phil T. (VA3UX)" <phil@vaxxine.com>
Message-ID: <396A7CC3.E621BBA3@vaxxine.com>
Source record: 64056

My selling price survey of Tek stuff on eBay has been updated. The
survey
now includes 1017 different instruments (scopes, probes, plug-ins etc),
and
there are over 11,200 prices data entries gathered during the past 11
months.
Some HP, GR and Wavetek stuff too.

My site is located at :

http://www.vaxxine.com/phil/default.htm

Comments/suggestions on the format greatly appreciated.

Phil Turcotte (VA3UX)

1666. Re: Who sells good 3-500Z's?

Newsgroup: rec.radio.amateur.boatanchors

I've had very good luck with the Chinese 3-500Z's that I bought for $210 a pair plus $6.00 shipping from ESRC Corporations of Boynton Beach, FL. Although they're not matched pairs, they seem to tune up nice in my Drake L-7. Their phone number is 561-737-8044. Web site is:

http://home.att.net/~esrc/esrcmain.html

1667. Help on National HRO-500 Receiver

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-10 00:00:00 UTC
From: Jim Bo <jbollit@ix.netcom.com>
Message-ID: <396AA969.D0D33051@ix.netcom.com>
Source record: 64058

Hello.....and help.

I have an HRO-500 that has the slug on the L-24 that needs to be replaced. When I tried to calibrate the BFO output per the manual, the core cracked and is now useless. I am unable to adjust the BFO per the manual.

Does anyone have a "part out" radio that they can pull the core from L-24 for me?

Any other suggestions?

Thanks in advance, I want to get this classic radio back on the air!!

Jim

> 6146b tubes

Just from the description, I would say the output position samples some of the RF out, rectifies it and displays it on the meter. In this position, you would tune for max. CATH must read cathode current (plate+grid) and in this position you would tune by successive dipping and loading the final Pi net. There is absolutely no reason the finals would even "know" you were moving this switch. I would guess at another problem- like keying down with the finals not resonated.

1686. COM-RAD Ind. heard of them? Antenna question

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-10 00:00:00 UTC
From: "Randy E. Randall" <randy_randall@hotmail.com>
Message-ID: <smjhdgh8nu86@corp.supernews.com>
Source record: 64239
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hello I have aquired a COM-RAD Ind. CR4010A antenna and was looking for info on it. It is the werdest looking thing, a big coil 6" in dia. made of 1/2" alum. tubing with a copper strap that is used to change the resonant freq. by attaching to a different spot on the coil and two replacement car antenna whips used as a cap. hat I think sticking out to the side. Anyone know anything else about it?

Thank you in advance,
Randy KB8ASO

1687. Collins 51J-4 and 51J-3 Nameplates

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-10 00:00:00 UTC
From: Tom Marcotte <marcotte@iamerica.net>
Message-ID: <B58F31BF.3C19%marcotte@iamerica.net>
Source record: 64240

I have for sale reproduction nameplates for the Collins 51J-3 and 51J-4.
These exact reproductions are made with permission of the Rockwell Patent
and Trademark Office in Cedar Rapids.

Serial numbers start with 12000. They are $12 shipped including screws.

Also have generic nameplates for the R-390A for $9.

From: "Ron in NC"
Subject: FRR-22 help needed

HI Gang,

We attended the Salisbury HamFest yesterday and like many times before this small fest yielded several good finds. There were a good number of BA's there and a nice looking AN/FRR-22 followed me home, plus a stack of back issues of "Electric Radio". Along with the FRR-22 came a full set of the hard to find pencil tubes and some tech data for it.

The FRR-22 looks to be in very nice original condx.
When I tried to fire it up after getting it back home
and past the approving eyes of the XYL, I was surprised
to have it trip the circuit breaker when I plugged it in.
After taking it apart and checking everything and finding
no problems I remembered that the outlet I was plugging it into
was on a GFI circuit and so I tried it on a regular outlet and
it powered up without tripping the breaker.
The only problem I've found so far is that the audio output
is low and muddy sounding on AM (A1) but loud and clear
on SSB/CW (A3). Does anyone in the group have experience
with this radio and can give me some advice as to where
to this problem may be coming form?
Also does anyone have a spare gray Navy speaker that
would be correct for this receiver?

Thanks in advance for your help.

73,

Ron

From: "Norman Litsche"
Subject: FRR-22 help needed

Hi Ron,

I think this is the same as an SRR-12. Does it have a really exotic dial
mechanism that uses a mirror?

Still have a couple of those in service.

Those were designed for shipboard power which was balanced above ground.
There are filters connected from each side of the line to ground. Current
thru one of these to ground is what caused your GFI to get upset. I run
mine with an isolation transformer and use a couple of light bulbs in series
with the 'centre-tap' connected to ground.

The bellcranks that move all the bandswitch and IF switchery is a big
problem with these.

Capacitors are a problem too. That's possibly why your AM is muddy. The
signal path that occurs in AM is different than the one that occurs when the
BFO is used.

I have the mother of all manuals for this thing. Write further and we'll
talk.

Norm KA2TYT

Yes, the FRR-22 is the shore station version of the shipboard SRR-12.

>
> Still have a couple of those in service.

Where are they being used?

That's what I figured was the cause of the trip.

Since this thing is all modules maybe I can figure out which one is the
cause, I feel very lucky to have gotten a full set of tubes with it.

>
> I have the mother of all manuals for this thing. Write further and we'll

Do you know if anyone has the big manuals for sale?

Ron,

Subject: FRR-22 help needed

The audio output xformer is also a high-failure item. Mine (an FRR-23)
is still working OK but has had a number of caps and the audio xformer
replaced. Keep those pencil tubes!! They're getting a bit harder to
find.

From: "Ron Eisenbrey"
Subject: FS: Collins 75A-2 with 270G2 Speaker

I have a restored A2 and matching speaker that needs a new home. It is just too big for the available room remaining in the shack. This receiver has all new electrolytic caps, a new metal can dual section electrolytic was put in the B+. All of the "black beauty" caps were replaced with modern caps. All resistors out of spec were replaced. All pots cleaned and lubricated, chassis received a thorough cleaning. All linkages, shafts, gears and

bushings lubricated. A new drum dial was installed.

This is a late model A2, uses the 6CB6 RF amp and the 6BA7 mixers. This receiver has a crystal calibrator installed. Front panel is excellent and original, cabinet has been touched up. All knobs are original and none are broken. This receiver is not a collector's set but is a very excellent everyday user set. I would rate the overall condition as a 8.9 and you will find no dust or crud inside this set.

Receives AM very well but does not do well on SSB (It was not the intent of the Collins designers to make this receiver for SSB). The only thing that is not original on the chassis are three RCA phone plugs which were added to the rear panel. I left these installed although there is no wiring hooked to them. I believe a past owner may have used these jacks for an external product detector for SSB. These can be easily removed and plugged if desired.

Instruction manual with fold out schematic included. $950 for receiver and speaker plus shipping from 77478. I will not separate the receiver and speaker.

Thanks,

Ron, AB5WG

From: "Paul N. Katz"
Subject: FS: Collins 75A-2 with 270G2 Speaker

Hi Ron, good luck on selling the receiver. The speakers are going for alot of money. It's a shame you put so much work into the receiver and now are selling it. Are you keeping the 75S-1? Ever try Drake? You might like. You need to rent radios from me before spending a lot when buying. 73, Paul

Subject: FS:SX62-A

Trying to thin out a few pieces I just don't use and since I have
a very nice SX-42, my SX-62A (essentially the same radio electrically)
is being offered for sale.
Works on all bands, has had some but not all tubular caps replaced,
and could probably use an alignment.
Cosmetically.....excellent front panel, excellent dial and glass, all knobs
correct and lettering excellent.
Cabinet has typical scratches but not bad...I would not be inclined to
repaint
it if I kept it.
With manual. Price $275
Would prefer not to ship but will do so at your expense....can meet someone
within a reasonable distance of Atlanta. Estimate of shipping weight would
be 65lbs from 30178.

Tnx and 73 !

From: "Jim Roik"
Subject: Grounding old Heathkits?

Hi Jim.

When I did my Apache I did not want to modify it by drilling holes but I did want to go to a three wire plug. What I did was to use a minibox in which I mounted the fuse and brought in the three wire cord. I then ran the 120 V and the ground to the Apache. The 120 went to where the original connections were and the ground went to the chassis. I'm not using the original plug but feel a lot safer.

Good luck.

Jim

Subject: SWAN RADIO HELP!!

This switch controls where the metering circuit is sampling. In the output position, you will measure relative output power. In the CATH position, you will be measuring Cathode current of the 6146B tubes. I didn't see anywhere in the book where switching the switch during transmit would cause problems. In looking at the schematic the cathode of the 6146's are fed to ground through a pair of 1-ohm resistors; the meter, through the switch selector, is placed across the 1-ohm pair with a 180-ohm in series with meter. All that to say that it wouldn't significantly change the value of two 1-ohm reisistors in parallel to ground. In my opinion you should look for another reason for blowing the tubes.

The only thing I see that does this is to set the reader to "delete Messages
when read" and I don't want to delete them, just not show them.

I have it set not to show read messages, but the ones in other newsgroups
still show.

Hi Gang,

There was some discussion a while back about the radio
equipment used on M*A*S*H.
I posted the message below yesterday and below it is the reply
I got from LG who is Larry Gelbart who was the exec producer
of M*A*S*H.

Ron

>
>There have been some discussion on one of the radio news groups
>lately about the radio equipment shown on MASH.
>Does anyone in the group (Larry G) know anything about
>what was used?
>Was the radio gear shown just a bunch of stuff thrown together
>to look like a radio?
>Any idea what happened to the radio props used on the show?
>

It's all stuff from the Fox Prop Dept., probably left over from the movie
version. It was WW2 surplus. (But then, so am I.)

Does anyone recall the radio used on the Sky King TV show?

I remember the show aired in the late '50, early '60's.
It was a Western starring Kirby Grant, a flying cowboy who fought the
bad guys by flying a plane instead of riding a horse.

The radio was on a desk in this living room and was used to
communicate with various pilots and the law.

The show also featured Sky's nephew, who was pretty dense,
and his niece, Penny, who was quite a dish.

1697. Atlas 210X Problem or Normal?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-11 00:00:00 UTC
From: jim@snoopy.cmagic.com
Message-ID: <396a8df9.4605495@news.epix.net>
Source record: 64065

When the Atlas 210X in SSB mode and is keyed with the mic with mic gain and alc both set to zero, the heatsink seem to heat up rather quickly. Watt meter shows no output and scope shows no modulation. Within about 30 seconds the heat sink is too hot to touch. I wouldn't think it would get that hot with just the bias current. Anyone know if this is normal for this radio? Thanks.

Source record: 64067

This is not normal, could be that Pa has lost bias,making finals draw too much current at idle. bias should be set so that finals draw about 1/2 amp as shown on front panel ammeter..if thats hard to read insert an external ammeter in the main DC line to the rig ,turn rig on ,that will show rec current in millamps,inSSB mode, key mic ,meter should increase a bit over 1/2 amp.check bias pot inside PA section and adjust as necessary to get the 1/2 amp idle current. if it is allowed to run any length of time in this overheat condition the output transistors will no doubt be destroyed.. good luck Harold W4PQW

Jim,

I'm a bit confused. Can you be a little more specific on what is a 'mini-box' and what kind of fuse you are using as far as rating goes; also where do you bring in third line to this box? I then assume that you bring all three leads into the tx. with the ground going to where on the chassis? Sorry for asking some stupid questions, but I've been out of the electronics loop for about 32 years since I was 16. Just now getting back into amateur radio with the radios that I could only dream of as a kid. Any suggestions/advice that you can offer in regard to the Apache and Mohawk will be greatly appreciated! I've got the 1959 models. I just found an AK-5 speaker to go with the Mohawk. Thanks! Jim

I don't know that particular part, but I'd think you could go through a few
old coils and find one with a core similar, or the same.

I think you will find that if the core is a fairly close match is should
work,
I'd try a few to see if it'd work rather than trying to find a complete part
number L-24 transformer.

From: "Brian Denley" <bdenley@erols.com>
Subject: Hammarlund IF alignment?

I own a very nice HQ-150 and I have the equipment need to do the IF
alignment as called out in the Hammarlund manual. These descriptions are,
however include amazingly little information. In doing to stage-by-stage IF
alignment, they tell you where to inject the signal sweep but nowhere does
it say where the o-scope is connected. Has anyone performed the Hammarlund
alignment as specified in the manual? Do I connect the scope to the final
IF stage output or the audio amp output? The scope is supposed to be in X-Y
mode and the manual stresses that I should strive for scope pattern
"co-incidence", in addition to symmetry and amplitude.
Thanks for any help
Brian Denley

On my original model RA17 the voltage is adjustable on the back panel for
110-120v and 220-250v (I think), doesn't the -17L have that?

Subject: WTT:Motorola Micom-XF for Collins radios

Hello,
I want to trade an HF transceiver MOTOROLA model MICOM-XF.
This is an outstanding digital radio:1.6-30 Mc/s, rated conservatively for
125 watt PEP, suitable for harsh environment as per MIL-STD-810C, full
computer control capability, etc.
It come with complete set of documentation and sw.

I want to trade it for a Collins receiver 75S3-C.

Pictures available by mail on request.

Subject: Atlas 210X plug

Howdy all - I'm looking for a plug that fits into the aux connector in back
of
the Atlas 210X...the connector looks like a standard, 9 pin miniature tube
socket...anyone know if there's still any of these floating around? Tnx in
advance. Jay, N3DQU.

Date: Tue, 11 Jul 2000 03:07:31 GMT
From: jim@snoopy.cmagic.com (Jim)
Subject: Atlas 210X Problem or Normal?

When the Atlas 210X in SSB mode and is keyed with the mic with mic
gain and alc both set to zero, the heatsink seem to heat up rather
quickly. Watt meter shows no output and scope shows no modulation.
Within about 30 seconds the heat sink is too hot to touch. I wouldn't
think it would get that hot with just the bias current. Anyone know if
this is normal for this radio? Thanks.

Date: 11 Jul 2000 03:52:15 GMT
From: w4pqwhs@aol.com (W4pqw HS)
Subject: Atlas 210X Problem or Normal?

This is not normal, could be that Pa has lost bias,making finals draw too much
current at idle. bias should be set so that finals draw about 1/2 amp as shown
on front panel ammeter..if thats hard to read insert an external ammeter in the
main DC line to the rig ,turn rig on ,that will show rec current in
millamps,inSSB mode, key mic ,meter should increase a bit over 1/2 amp.check
bias pot inside PA section and adjust as necessary to get the 1/2 amp idle
current. if it is allowed to run any length of time in this overheat condition
the output transistors will no doubt be destroyed.. good luck Harold W4PQW

Subject: Grounding old Heathkits?

Jim,

I'm a bit confused. Can you be a little more specific on what is a
'mini-box' and what kind of fuse you are using as far as rating goes; also
where do you bring in third line to this box? I then assume that you bring all
three leads into the tx. with the ground going to where on the chassis? Sorry
for asking some stupid questions, but I've been out of the electronics loop for
about 32 years since I was 16. Just now getting back into amateur radio with
the radios that I could only dream of as a kid. Any suggestions/advice that you
can offer in regard to the Apache and Mohawk will be greatly appreciated! I've
got the 1959 models. I just found an AK-5 speaker to go with the Mohawk.
Thanks! Jim

Subject: Help on National HRO-500 Receiver

Hello.....and help.

I have an HRO-500 that has the slug on the L-24 that needs to be
replaced. When I tried to calibrate the BFO output per the
manual, the core cracked and is now useless. I am unable to
adjust the BFO per the manual.

Does anyone have a "part out" radio that they can pull the core
from L-24 for me?

Any other suggestions?

Thanks in advance, I want to get this classic radio back on the
air!!

I don't know that particular part, but I'd think you could go through a few
old coils and find one with a core similar, or the same.

I think you will find that if the core is a fairly close match is should
work,
I'd try a few to see if it'd work rather than trying to find a complete part
number L-24 transformer.

"Little Jimmy" has been no stranger to the radio newsgroups. "This title" is
merely reflective of his conduct hereabouts. A little trip down dejanews will
illustrate his upstanding and well-mannered conduct here.

>This man is your brother.
Speak for yourself, pal.

>Many people are wrongly accused of many thigns in this life.
So? Your point is?

>This must be very inspiring to people thinking of entering the hobby
Oh, come on. Having a ham called to task for his actions should be very
reassuring to anyone thinking of entering the hobby.

>and says much more about your character than his.
Well, since you're Little Jimmy's brother, that is more than we need to know
about *your* character.

Come to think of it, your screen name seems more like one of little jimmy's
sock puppets...

Subject: Sky King Radio

Does anyone recall the radio used on the Sky King TV show?

I remember the show aired in the late '50, early '60's.
It was a Western starring Kirby Grant, a flying cowboy who fought the
bad guys by flying a plane instead of riding a horse.

The radio was on a desk in this living room and was used to
communicate with various pilots and the law.

The show also featured Sky's nephew, who was pretty dense,
and his niece, Penny, who was quite a dish.

> 6146b tubes

Just from the description, I would say the output position samples some of
the RF out, rectifies it and displays it on the meter. In this position,
you would tune for max. CATH must read cathode current (plate+grid) and in
this position you would tune by successive dipping and loading the final Pi
net. There is absolutely no reason the finals would even "know" you were
moving this switch. I would guess at another problem- like keying down with
the finals not resonated.

Note which way pins 1&4 are oriented in your amplifier and hold each of the tubes horizontally so that these pins are in the same plane. If the greater dimension of the plate is vertical then the tube may be safely used in this position. The problem is that not all makers took care to glue the base on to the tube in the same position for every tube. The odds are, however that those sylvania 811's were actually made by RCA, in which case you have nothing to worry about. BTW are they 811 or 811A's. I think it's possible that only the 811A's were certified for horziontal operation. The problem is that of the hot filament saging and touching the grid, which won't happen if the filament wires are all in the same vertical plane.

A sad, but not surprising, response. Attempting to correct a scorner is seldom fruitful. Gossip of any kind profits no one, and surely no one can know anything factual or certain about anyone else, via the internet, and words are not "conduct." I don't think people would be attracted to a hobby run like a democracy (i.e., 5 wolves & 2 sheep deciding together what's for dinner). Even the email ID of the submitter is foul & scornful. Thread is off-topic, so I yield to its futility, having shaken the mouse dung out of the chassis & seeing that there isn't enough goodness left in the rig worth restoring.

Hi All,

Anyone have comments/experience with putting together a low-
ripple stable regulated PS with 6.3vdc@~3A and 90vdc@~1A from
a primary of 117VAC (residential) ? Ask if you need more info.

What would be a good xfmr to use for this ? I'd like to have
a bit of 'headroom' in the current dept. And I'm sure I can
find the rect bridge and caps (computer grade ok ?) for it
from 'All Electronics', Alltronics, Hosfelt or Mouser.

This will be for powering an older 1/2 watt 47-59 MC
military vehicular tranceiver (miniature tubes). I know
there IS a matching PS for this unit, but I'd rather not
have to deal with vibrators and having to supply the inter-
mediate 12/24 VDC to power THAT unit as well.

I don't expect this to cost a BUNDLE, but neither do I intend
to use the lowest grade components available. I want this to
be as close as I can feasably get it to flat DC. And it would
be nice to have some decent line regulation, and transient spike
suppression. The AC mains here aren't the most stable :-/

Hi All,
I finally chopped up the SX25 parts set. I have a bunch of chassis parts for sale. NO "s" meter, no power xfrmr. Most other parts are available. I also have those slats for the side of the cabinet and the hardware for mounting them. Also have the dial scales, both main and bandspread. Pictures of anything you want are available before purchase if desired. Please email me directly with needs/wants...
rgds,
Mark S.

1736. Re: Value of Drake L4C, R7, and TR7

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-11 00:00:00 UTC
From: "Fredric J. Einstein" <feinstei@mw.mediaone.net>
Message-ID: <2sqnmscavmplqslsftt3ch23ahqcv5ek8m@4ax.com>
Source record: 64154
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.misc

>Drake R7

The R-7 is worth anywhere up to $850 if it's in pristine shape, with the noise blanker, 6 kHz filter, and 1.8 kHz filters installed. Add $50.00 if you have the box, service manual, and original instruction manual. Without the noise blanker, it's worth about $75 less. Lack of the 6 kHz filter subtracts about $60. Lack of the 1.8 kHz filter subtracts about $40.

These are highly desirable among shortwave broadcast listeners and they are considered one of the best receivers around for shortwave DX'ing.

>Drake TR7

The TR-7/PS-7 with a full complement of filters in pristine shape with the noise blanker is worth about $700 maximum. Add $50 for original packaging, instruction manual, and $25 for the service manual. Subtract about $50 if the TR-7 doesn't put out at least 60 watts on 10 meters. There's a couple of switching diodes on the front of the high pass filter assembly that go bad quite often and reduce the power output on 10, 15, and sometimes 20. Although they're easy and cheap to replace, the value of the TR-7 suffers if they're bad. A bare-bones TR-7/PS-7 with only the SSB and CW filters goes for about $500.

Source record: 64100

FS: Collins 75A1 parts radio. Things that are missing:
Cabinet
Round Kilocycle dial
some sheild covers
(1) RF coil
It is 95% there. I plugged it in and it gets static but sensitivity is way down. It did a pull in a couple very strong stations but thats it. Cosmeticlly the front is ok with a bit of a wear mark around the tuning dial and some nicks. This is a definite project radio or could be a great source of parts for others but I have no time to part it out or restore it. $200 shipped cont U.S.
Tnx,
Jim

I have for sale a Kenwood TM-3530A 220 Mhz mobile rig.....This rig is in excellent condition with no scratches, marks, dents etc.....I would rate it a 9.5, but I don't have the original box.....I have the quick release mounting bracket MB-10 still in the plastic and never been used and the original instruction manual.....Also have the up and down microphone MC-42s.....It comes with the following accessories, the TU-7 tone board, VS-1 voice synthesizer, MU-1 DCL modem unit, service manual and the CD-10 call sign display.....This rig is loaded with all the internal options..... Its a 25 watt rig with the built-in keypad on the front face of the rig.....I will take $300 for everything plus shipping and can be reached at (508) 821-2993 or e-mail.....WZ1U Steve / Lakeville, Ma.

Below is some communication which may be interesting to some of you.
I have donated a refurbished and working R-390A to this effort but as you
can see the need is extensive. Some of you certainly have pieces which would
fit in to this need. I think all of us should consider the enormous debt we
owe to this ship and the men who sailed her. We are in a particularly good
position to do something about this. This is a good opportunity to make a
positive statement for our hobby.

Thanks for the bandwidth and you can respond to me or peter of the list.

Mike Taylor

BTW if you have something and need some help with the shipping let me know I
will try to help you out.

Mike,

Great! Any other donations you can aim our way would be most appreciated.
Any of the military stuff from RBAs, RBBs, TBAs down to the 1051s and URTs
would be displayed (and operated?) with pride onboard this memorial.

If you or any others have questions on the authenticity of this endeavor,
Ned Conklin is the current president of the BMARC (Battleship Missouri
Amateur Radio Club) whose email address appears in the CC above. He may be
contacted independently.

Again, a big thanks.

Pete Wokoun, KH6GRT

Source record: 64155

You might look for a 120 v 1amp isolation transformer .you could use a vr tube voltage regulator ..I might suggest that you look again about needing 1 amp at 90 volts,that much power would run a 50 watt output transmitter . to save money you can sometimes use two filament transformers back to back ,you can get them about anywhere. good luck Harold W4PQW

1766. Re: FOR SALE HENRY 2K CLASSIC X AMP

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-12 00:00:00 UTC
From: Tom Nicholson <gunsrus@optonline.net>
Message-ID: <396BCEC4.368704A1@optonline.net>
Source record: 64157

Let me quote from Henry:

"The 2K Classic X mates the reliable 2K Classic RF deck (with
several important improvements) to the heavy duty power supply
of the 3K Classic X. This amplifier is designed for the military or
commercial user who needs reliable operation in high duty cycle
circumstances."

2K Classic 1200 watts PEP
750 watts CW

2K Classic X 2000 watts PEP
1000 watts CW

Plate Voltage
2K Classic SSB: 3000-3200 VDC
CW: 2000-2200 VDC

2K Classic X SSB: 3700-3900 VDC
CW: 2700-2900 VDC

Hope this answers some of your questions

FS Hallicrafters Super Defiant SX25 rcvr.

Cosmetically, I would say the rx is in "good condition". There are some patches of paint rubbed away on the side and one spot on the front panel (lower left). It plays FB. The power supply caps and coupling caps have been replaced.

I may have a photocopied manual (I have to check)

Best offer takes it. I prefer local pickup in NYC area.

From: "Joe Geller"
Subject: Allen Bradley 2W Carbon Composition Resistors

What is a good source for new old stock (NOS) Allen Bradley carbon
composition resistors at reasonable prices?

I'm looking for quantity 3 to 10 of 270 kilo ohms, 2W, 5 or 10%, incase
anyone has extras. I'd prefer the AB brown case with regular color bands to
preserve the look of the old boatanchor.

Thanks,

Joe, WB2NOY

From: Charles Days
Subject: Allen Bradley 2W Carbon Composition Resistors

Joe,

Try Newark.

I needed 50 of 33 at 2 watt about a year ago. I was informed that Ohmite was
discontinuing the 2 watt carbon line. Seems they were bought out and were
re-organizing the product line. A-B's may be dark green body.

Good Luck

Charlie

From: Will
Subject: Anyone know M*A*S*H station specifications?

I don't know why I never thought of it before, having seen probably 500 re-runs, but what sort of station is that in Radar's office on "MASH"? I have heard the suggestion that the transmitter on top of the switchboard is a Hallicrafters, but it doesn't look like any I can find described in the Dachis book.

What is the transmitter (gray, with twin meters)? What modes, bands, and RF power were used?

What is the receiver, and where is it? I have been watching twice a day this week, and can't locate it in any of the shots, though the TX PS seems to be on top of the bookcase to the left of the transmitter itself.

What sorts of antennas would have been used?

As for the crank-up field-phone setup that Radar often uses to contact his buddy "Sparky", I-COR, and the 8063rd MASH, is that strictly a landline circuit, or radio? Did they use low-VHF in those days for such short distance communications, either AM or FM?

Thanks,

de Will KD7BFX

P.S. there used to be a web site devoted to ham/military/HF radio/CW in the movies and on TV. Does it still exist?

From: "NANCY GIANAKOPOULOS"
Subject: Hammarlund IF alignment?

Hi Brian,
You would probably hook the scope up to the output of the final IF stage. Use very light coupling, so as not to detune the IF strip; a 6pF coupling cap, in series with the scope probe would probably be ok. Make sure that the voltage rating of the cap is at least 600V. I am not sure if the IF strip is stagger-tuned in this model or not, but one thing you can also do is to inject a noise source into the first stage of the IF strip, and hook a spectrum analyzer at the output, observing the bandpass as you tune. Good luck!

Pete Gianakopoulos

Subject: Programming for old Motorola VHF rig

Hello,
I have recently acquired an old (hence the "Boat Anchor connection!)
Motorola VHF mobile rig, that I would like to convert for two meter use.
It is labeled as a "Radius GM300". Apparently, an external frequency
programming method is required. Can anyone tell me the details of what is
needed to do this? I assume that Motorola has no problem with this, given
that the radio was already in the ham surplus market, but I also assume
that they would not help either. Is there a PC based software package
available, in the amateur world, that would serve the purpose here? Any
ideas or advice would be greatly appreciated.

Subject: Wanted to trade: KWM-2 for 75S-3B or C

(Hey, cut out the laughing guys!)

Later model with enclosed relays, would be CCA excellent if the previous
owner had not replaced the RF out jack with a UHF connector (it is well
done and not sloppy.) Also have 516-F2 supply in cabinet, and new service
manual. Am looking for a 75S3B or C, prefer C in at least good condition.
Would prefer to deliver in person up to an 8 hour drive from middle
Tennessee,
but can arrange shipping if needed.

Also have a G-133F reciever by LTV, a repackaged 51S1, good condition
except for missing top and bottom covers. Neat rx with backlit black front
panel for those who have not seen one.

Please email directly.

I don't remember the radio, but I do recall the airplanes that
he flew. He started out with a Cessna Bobcat (a WW-II surplus
trainer known as the "Bamboo Bomber due to its largely wooden
structure), then moved on to a more modern Cessna 310.

Subject: F.S. Hallicrafters SX25 parts.....

Hi All,
I finally chopped up the SX25 parts set. I have a bunch of chassis parts for

sale. NO "s" meter, no power xfrmr. Most other parts are available. I also have those slats for the side of the cabinet and the hardware for mounting them. Also have the dial scales, both main and bandspread. Pictures of anything you want are available before purchase if desired. Please email me directly with needs/wants...
rgds,
Mark S.

Subject: FOR SALE HENRY 2K CLASSIC X AMP

Let me quote from Henry:

"The 2K Classic X mates the reliable 2K Classic RF deck (with
several important improvements) to the heavy duty power supply
of the 3K Classic X. This amplifier is designed for the military or
commercial user who needs reliable operation in high duty cycle
circumstances."

2K Classic 1200 watts PEP
750 watts CW

2K Classic X 2000 watts PEP
1000 watts CW

Plate Voltage
2K Classic SSB: 3000-3200 VDC
CW: 2000-2200 VDC

2K Classic X SSB: 3700-3900 VDC
CW: 2700-2900 VDC

Hope this answers some of your questions

Subject: Jimmy NO'Brain makes friends at the FCC

A sad, but not surprising, response. Attempting to correct a scorner is seldom
fruitful. Gossip of any kind profits no one, and surely no one can know
anything factual or certain about anyone else, via the internet, and words are
not "conduct." I don't think people would be attracted to a hobby run like a
democracy (i.e., 5 wolves & 2 sheep deciding together what's for dinner). Even
the email ID of the submitter is foul & scornful. Thread is off-topic, so I
yield to its futility, having shaken the mouse dung out of the chassis & seeing
that there isn't enough goodness left in the rig worth restoring.

>>Why do hams pre-judge and slander another like this title, with no knowledge
>>of the facts?

>"Little Jimmy" has been no stranger to the radio newsgroups. "This title" is
>merely reflective of his conduct hereabouts. A little trip down dejanews
>will
>illustrate his upstanding and well-mannered conduct here.

>>This man is your brother.

>Speak for yourself, pal.

>>Many people are wrongly accused of many thigns in this life.
>So? Your point is?

>>This must be very inspiring to people thinking of entering the hobby

>Oh, come on. Having a ham called to task for his actions should be very
>reassuring to anyone thinking of entering the hobby.

>>and says much more about your character than his.
>Well, since you're Little Jimmy's brother, that is more than we need to know
>about *your* character.

>Come to think of it, your screen name seems more like one of little jimmy's
>sock puppets...

Subject: Need info for building 90vdc PS

Hi All,

Anyone have comments/experience with putting together a low-
ripple stable regulated PS with 6.3vdc@~3A and 90vdc@~1A from
a primary of 117VAC (residential) ? Ask if you need more info.

What would be a good xfmr to use for this ? I'd like to have
a bit of 'headroom' in the current dept. And I'm sure I can
find the rect bridge and caps (computer grade ok ?) for it
from 'All Electronics', Alltronics, Hosfelt or Mouser.

This will be for powering an older 1/2 watt 47-59 MC
military vehicular tranceiver (miniature tubes). I know
there IS a matching PS for this unit, but I'd rather not
have to deal with vibrators and having to supply the inter-
mediate 12/24 VDC to power THAT unit as well.

I don't expect this to cost a BUNDLE, but neither do I intend
to use the lowest grade components available. I want this to
be as close as I can feasably get it to flat DC. And it would
be nice to have some decent line regulation, and transient spike
suppression. The AC mains here aren't the most stable :-/

Subject: Need info for building 90vdc PS

You might look for a 120 v 1amp isolation transformer .you could use a vr tube
voltage regulator ..I might suggest that you look again about needing 1 amp at
90 volts,that much power would run a 50 watt output transmitter . to save
money you can sometimes use two filament transformers back to back ,you can
get them about anywhere. good luck Harold W4PQW

Date: Tue, 11 Jul 2000 23:59:56 -0400
From: "Fredric J. Einstein" <feinstei@mw.mediaone.net>
Subject: Value of Drake L4C, R7, and TR7

>Drake R7

The R-7 is worth anywhere up to $850 if it's in pristine shape, with the noise blanker, 6 kHz filter, and 1.8 kHz filters installed. Add $50.00 if you have the box, service manual, and original instruction manual. Without the noise blanker, it's worth about $75 less. Lack of the 6 kHz filter subtracts about $60. Lack of the 1.8 kHz filter subtracts about $40.

These are highly desirable among shortwave broadcast listeners and they are considered one of the best receivers around for shortwave DX'ing.

>Drake TR7

The TR-7/PS-7 with a full complement of filters in pristine shape with the noise blanker is worth about $700 maximum. Add $50 for original packaging, instruction manual, and $25 for the service manual. Subtract about $50 if the TR-7 doesn't put out at least 60 watts on 10 meters. There's a couple of switching diodes on the front of the high pass filter assembly that go bad quite often and reduce the power output on 10, 15, and sometimes 20. Although they're easy and cheap to replace, the value of the TR-7 suffers if they're bad. A bare-bones TR-7/PS-7 with only the SSB and CW filters goes for about $500.

Greetings, Hallicrafters fans!

I am parting out a Hallicrafters S-107 receiver. No knobs,
no glass dial, no speaker, no tubes. Otherwise appears to
be complete and not rusted/corroded inside. I guess I ought
to note that this is a Mark II model (uses 7- and 9-pin mini
tubes as opposed to the earlier models which used octals).
What do you need?

73,
Dean, K5DH

Source record: 64177

Try www.w7fg.com. He has manuals for Kenwood radios. BE VERY CAREFUL if you order a manual from Howard W. Sams!
These guys will sell you a poorly photocopied, expensive collection of loose sheets. I had three sheets for my TS-430 that were impossible to read, and they insisted I send them back for replacement. Normally that wouldn't be a problem, but it took six weeks to get the manual in the first place, and another six weeks to get the replacements. They were barely any better than the first ones.

In very good condition , original medium grey paint with slight wear, (50 years will leave marks!!!) Original Jensen PM speaker with good cone . Grill bars still have good chrome and winged emblem is good. Flocking could be redone. Three feet of four feet are original . Price goes to first $275.US plus freight and packing. I double box everything! If not sold , it goes on ebay next week.
Shipping from Montreal. No calls --please e-mail only.

I have a 2000volts 1.75 Amp transformer for sale if anyone has the use
for it.
The beast is very heavy. of course.\
Asking Cdn$45 for it.
At this price, shipping would cost more than the unit, so please only
pick-up in Toronto area.
E-mail to parrfoo@sympatico.ca

Jack

Subject: ** FLEA at MIT ** Sunday July 16th Cambridge MA
Summary: Buy Sell SWAP Ham Radio Electronics Computers 9AM - 2PM

This coming SUNDAY !!

*** !!!! In our Traditional GARAGE and lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday July 16th 2000
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 145.23-W1BOS/R and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

Nope, tiny, little, almost useless 2FP1's.
I don't see them listed in my reference books, so maybe
they were a special design.

FS: Drake, Heathkit, Realistic items

Drake TR-4CW xcvr, RV-4C remote VFO, AC-4 ac supply, original manual. All excellent shape, only minor wear on tuning knob finger hole. For specs see www.dproducts.be/drake_museum/tr-4cw.htm. Selling as package only. $450 US + shipping.

Heathkit AR-3 receiver, original cabinet in good to very good condition, non-original knobs, not working (bad caps?) but physically all there; front panel is VG to excellent. Good restoration project. $35 US + shipping

Heathkit HD-16 Code Oscillator, excellent condition. $30 US + shipping

Realistic DX-160 gen coverage receiver, matching SP-150 speaker. Very good condition & working. $60 US + shipping

Also - I would like to find a Gonset G-33, G-43, or G-63 receiver, working or not. Will consider parts radio.

Boy, does this bring back memories! I built a VHF converter for my BC-348 out of an old TV tuner (21.5 MHz IF, tuned down to about 16.5). It had a 6J6 and a 12AT7. Heard Air Traffic, police, 2 meters, taxicabs and mobile telephone. It wasn't very stable and I used to set up on the mobile telephone frequency because there was always some sort of signal there - conversation or a tone - to line up on.

Must be. The only 2" crt's I've ever heard of were the 2BP1, 2AP1, and
the 902. There were a few different 1" crts made also.

That's the biggest problem with doing business with proscrastinators.
You NEVER send money in advance. You do business by credit/checking card as it can be refused or disputed. The guy probably didn't even intend to rip you off but he's procrastinating as wrapping
and shipping stuff is an annoying bitch that I hate doing myself and if money is already in hand the motivation
is gone.
I bet once you put some heat on his ass like you are in here, he starts responding. He's been playing you for a sucker
and didn't even intend to I bet.

True, sick or not, if he had one moment of coherency he could have asked someone else to ship
the package to you.
Like you said, he had no problem getting your check cashed but he has a problem with delivering on
the goods.
2 months is insane unless he has brain damage.

While digging through another old box I found Three (3) copies of the
CV-591A SSB Converter Tech Manual (NAVSHIPS 0967-051-2010).
I must have made them about 25 years ago when I had about 10 of the
converters. (I was lucky at a Gov Surplus Sale).
The photos didn't copy too well (actually lousy !) but the schematics
are large, single page (11h X 20-30 w) and the text is excellent.
$18 each, shipped USPS Priority Mail.

Source record: 64012

For Sale: Heathkit DX-60 and HG-10, both the original models, not the later A or B versions. Work fine, full, stable output on all bands. Good condition, no rust, intact, all original knobs, front panels of both very nice. Cabinets could use a little work, but no dents or dings. Band drum on VFO is not cracked, which is rare. W7FG manual on DX-60 included.

Will throw in Heathkit MT-1 mobile transmitter in fair shape, knobs still shiny, untested, but intact. Need to make some room here.

$135 shipped for the lot.

Alan, N3BJ

1825. IF Transformer

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-13 00:00:00 UTC
From: Jim Bo <jbollit@ix.netcom.com>
Message-ID: <396EAAAD.1BFDE961@ix.netcom.com>
Source record: 64016

Does anyone have an old IF Transformer (455 Khz) laying around
that they would part with?

The physical size of the IF can I am looking for is about 2
inches in height and has an adjustable hex core that takes
approx. a 1/8 inch adjustment hex tool.

I really need the slug inside the IF to replace one that
"disengrated" when I tried to adjust the coil in my radio.

If anyone has a couple of slugs that are approx 1/4 inch in
diameter with a hex adjustment, these would also fit the bill.

Thanks

Jim

I had a plug for mine,but it kept falling out. I made the required
jumpers out of solid copper wire which would stay in the connector,
and have not had another problem with it. The plugs are also easily
lost.

>bias pot inside PA section and adjust as necessary to get the 1/2 amp idle
>current. if it is allowed to run any length of time in this overheat condition
>the output transistors will no doubt be destroyed.. good luck Harold W4PQW

I found the problem. Apparently one of the previous owners was doing
something on the PA board and didn't get a few things right. The
finals were replaced at some point with new Motorola units. It looks
like the bias transistor was also replaced. One of the bias resistors
was the wrong value, and a bypass cap was missing in the bias circuit.
I got it straightend out and adjusted it to idle as you and the manual
suggest at 1/2 amp. Works great now. Runs much cooler. Thanks for the
info.

Message-ID: <396D510F.FC56BD42@aade.com>
Source record: 64126

Want copy of late 30's, early 40's Radio Craft
or Radio News or similar Magazine of that era
with an article describing how to build a TV
camera using an 1847 Iconoscope and a 2"
(902P1 I think) viewfinder.

I had that camera and article about 40 years ago
but my Dad sold it to a friend of his while
I was away at college.

I have acquired an 1847 Iconoscope and would
like very much to have the magazine article
again.

If you have collection of magazines from the era
I would appreciate your looking through
them for this article. Sorry I don't remember
the exact title of the magazine but seem to
recall it was Radio Craft and had picture of
camera on cover.

Would be willing to trade one of my L/C Meter
Kits for the magazine ($100 value).

Hi Folks,

I'm in the process of completing a deal with Dale myself. He has indeed been in and out of the hospital and undergone some surgeries and such. He has been very forthright and honest with me about the delays, and things are about to come to a good, clean close on our deal. The email address I've been communicating with is this one: nh6vrdale@aol.com and I've had no trouble getting responses from him (except when he has been in the hospital). I'm sure there is just some kind of misunderstanding or communications breakdown here. He's trying to juggle his business (a restaurant) and take care of his medical problems, as well as doing the ham thing. I've been buying/selling ham gear for over 20 years; I have a general ability to spot troublemakers. Dale does not come across to me as a problem child. I hope you're able to work out the deal and complete it to everyone's satisfaction. If I can help, please let me know.

73,
Dean, K5DH

Any similiarity between what was used duirng the Korean war and what is used as a prop for a TV show is more than likely to be a coinsidence. What you see may well be a cardboard box with some knobs glued on.

Field telephones are wired. The crank is a generator which activates a "drop" on the field switchboard or ring if hooked up directly to another field phone.

Quite true.

> "drop" on the field switchboard or ring if hooked up directly to another
> field phone.

Not totally true.

I'm a little hazy on the date of fielding, but the integration of field phones and radio was around in the early '60s at least.

While the field phone is/was mostly used in hard wired circuits, the Army has had the equipment for 12 channel radio links for a long time now.

Radio links aren't usually used at less than a battalion HQ, so it would
be unlikely for a MASH unit to have one, even if it were fielded during
the Korean conflict.

For the detail obsessed, the equipment of the time would have been a
CV-1548 telephone signal converter, TD-352 multiplexer, TD-202 multiplexer,
and a GRC-50 or GRC-60 radio set. This was a whole van full of equipment
and required a full time operator to keep it running.

The field phones are still used, but the van full of equipment is now a
couple of boxes (still in a van, but you have to put it somewhere).

the cease fire agreement allowed for NO interduction of new equipment....
therefore from what i saw in 1958... i would say that the correct set-up...if
by radio would be..EE-8 telephone...CF-1 carrier equipment...up to four phones
in...then to the AN/TRC-1 Radio...VHF 70-100 mcs...and there were circuits
using this set-up all the ways back to Japan...hill and island hopping...71`s

So the scenes where the doctors give surgical instructions (human and
veternary) over the radio or Hawkeye talks to his dad in Maine by phone
patch (mil-->ham-->landline) are bunk? Santy Claus, they lied to me ;)

From: k5dh@raytheon.com (Dean Hemphill, K5DH)
Subject: Parting out - Heathkit HW-2036A 2m xcvr

Greetings, Heathkit buffs!
(you must be a green freak, since you're reading this posting)

I am parting out a Heathkit HW-2036A 2m FM transceiver. Before you ask, I'll state that this is not a restorable set. It was not working when I got it; it lit up and give a brief "pop" in the speaker when I turned it on, but that's all. I've used the speaker, knobs, and microphone to repair my own HW-2036A, but the rest of the radio is present. The front panel and S-meter face are in good shape. In fact, if it wasn't so much work, I would use them on my own rig. Both the top and bottom of the cabinet are dented and the paint is rough, so they're likely of little use (unless yours are missing altogether). The set is fairly clean inside and the circuitry has not been hacked up. The rear panel has been hacked (a previous owner installed a BNC jack for the antenna connection, and did it poorly). What parts do you need? Could I interest you in the whole thing, since I've gotten all that I need from it? Drop me a line.

73,
Dean, K5DH

From: Skipp <skipp@pilot.ucdavis.edu>
Subject: Programming for old Motorola VHF rig

Hi Ross,

The GM300 is programmed with a computer interface called a "rib box", and the proper cable to plug into the mic plug. The software is typical Motorola Sourced, off brand software people were scared out of the business by Motorola years ago.

Most any two-way radio shop servicing Motorhead Radios can program it for you. A lot of amateurs like myself also have the stuff to do it. If you were close by me, I'd help you out for a six pack of diet pepsi... hey, not too bad.

The going rate for a two-way radio shop to re program a radio runs from about $25 to $35 max. More than that, they're sharks and I'd stay away from them.

cheers
skipp@pilot.ucdavis.edu

Subject: Royal UPS screwjob

Part 1
Looks like UPS lost another one, a radio shipped from Wi.- to
Long Island
It has not been scanned since June 30 in CACH Illinois (Chicago processing hub).

"The phone call"
UPS: "sorry sir are you calling about the radio"
.....YES, how did you know is a radio ?
UPS: are you the shipper or receiver

.....Receiver
UPS: Please contact the shipper we have no further information, it was last scanned in Cach (Chicago processing hub) Illinois.
....You #@#$#%$% people lost another one on me ?
UPS: Let me give you my supervisor.

UPS Supervisor: Sorry sir contact the shipper he can request a tracer if its 2 days past the scheduled delivery date.
.....I have been calling you people since last week informing you it hasn't been scanned anywhere requesting whats going on.

UPS Supervisor: Sorry sir I have no information you must contact the sender.
.....Why "he didn't screw up" looks like "YOU PEOPLE DID", I have to get back to work not sit watching for one of your stupid drivers to drop it off at the
wrong house at the curb buy the trash cans.

UPS Supervisor: Sir I must get back to work also ....terminating call

Part 2
I just caught the UPS driver dumping the radio at the bottom of the driveway ...both 1st and inner box smashed like accordions, packing chips flying all over, tape *over* tracking barcode, people looking on.

I run out "What the HELL is this" ....What happened here ?
Driver: All I can I can do sir is put " damaged box" into the computer.
.....Oh really why ask me, what the friggen hell is wrong with you !!
The whole box is destroyed and you had to think about making a damage note of it ?

The radio's seems to work ok it was wrapped up in 1 inch foam rubber.
The sender did a great job packing
.....ALL BE WARNED

Part 3
After noting a damaged rear fan the UPS websight says "left with and signed for by man at address" and no mention of damaged
box into the computer.
..........Also I did not sign anything, the driver took off quick when I asked him to wait wile I check the damage.
"Must have been that 15 inch machete I got to open the rest of the box"..... Hee Hee

Subject: Uniden ARU 251K repeater help, please?

Hi Terry,

If you go to my sonic server amateur radio pages, you can see a conversion
of the ARU-251 to an external (Ham) controller. I did place the basic
block cicuit diagram there.

I'm sure with a little patience, I can probably dig you up a receiver
circuit diagram. I have a few of these repeaters in service now. Email me
direct at the address below if you still need one.

cheers

Subject: WTB R-390A

well,,,, over the last week my brother has been playing with my receiver and
would now like one of this own.

he doesn't have alot of spare time so he would prefer one that is complete with
all covers, works well, and is cosmetically good enough to reside in their rec
room.

no preference to maker.

lemme know what you have and the price needed, thanks!

From: TLNixon@home.com
Subject: Atlas 210X plug

I had a plug for mine,but it kept falling out. I made the required
jumpers out of solid copper wire which would stay in the connector,
and have not had another problem with it. The plugs are also easily
lost.

>current. if it is allowed to run any length of time in this overheat condition
>the output transistors will no doubt be destroyed.. good luck Harold W4PQW

I found the problem. Apparently one of the previous owners was doing
something on the PA board and didn't get a few things right. The
finals were replaced at some point with new Motorola units. It looks
like the bias transistor was also replaced. One of the bias resistors
was the wrong value, and a bypass cap was missing in the bias circuit.
I got it straightend out and adjusted it to idle as you and the manual

suggest at 1/2 amp. Works great now. Runs much cooler. Thanks for the info.

Subject: FS:COLLINS 75A1 parts/project radio

FS: Collins 75A1 parts radio. Things that are missing:
Cabinet
Round Kilocycle dial
some sheild covers
(1) RF coil
It is 95% there. I plugged it in and it gets static but sensitivity is way down. It did a pull in a couple very strong stations but thats it. Cosmeticlly the front is ok with a bit of a wear mark around the tuning dial and some nicks. This is a definite project radio or could be a great source of parts for others but I have no time to part it out or restore it. $200 shipped cont U.S.
Tnx,

Jim

Subject: Parting out - Hallicrafters S-107

Greetings, Hallicrafters fans!

I am parting out a Hallicrafters S-107 receiver. No knobs,
no glass dial, no speaker, no tubes. Otherwise appears to
be complete and not rusted/corroded inside. I guess I ought
to note that this is a Mark II model (uses 7- and 9-pin mini
tubes as opposed to the earlier models which used octals).
What do you need?

I don't remember the radio, but I do recall the airplanes that
he flew. He started out with a Cessna Bobcat (a WW-II surplus
trainer known as the "Bamboo Bomber due to its largely wooden
structure), then moved on to a more modern Cessna 310.

From: "Michael Taylor" <mvtaylor@voyager.net>
Subject: USS Missouri

Below is some communication which may be interesting to some of you.
I have donated a refurbished and working R-390A to this effort but as you
can see the need is extensive. Some of you certainly have pieces which would
fit in to this need. I think all of us should consider the enormous debt we
owe to this ship and the men who sailed her. We are in a particularly good
position to do something about this. This is a good opportunity to make a
positive statement for our hobby.

Thanks for the bandwidth and you can respond to me or peter of the list.

Mike Taylor

BTW if you have something and need some help with the shipping let me know I
will try to help you out.

Mike,

Great! Any other donations you can aim our way would be most appreciated. Any of the military stuff from RBAs, RBBs, TBAs down to the 1051s and URTs would be displayed (and operated?) with pride onboard this memorial.

If you or any others have questions on the authenticity of this endeavor, Ned Conklin is the current president of the BMARC (Battleship Missouri Amateur Radio Club) whose email address appears in the CC above. He may be contacted independently.

Again, a big thanks.

From: neil <neil@aade.com>
Subject: WANTED late 30's, early 40's Radio Craft Magazine article

Want copy of late 30's, early 40's Radio Craft
or Radio News or similar Magazine of that era
with an article describing how to build a TV
camera using an 1847 Iconoscope and a 2"
(902P1 I think) viewfinder.

I had that camera and article about 40 years ago
but my Dad sold it to a friend of his while
I was away at college.

I have acquired an 1847 Iconoscope and would
like very much to have the magazine article
again.

If you have collection of magazines from the era
I would appreciate your looking through
them for this article. Sorry I don't remember
the exact title of the magazine but seem to
recall it was Radio Craft and had picture of
camera on cover.

Would be willing to trade one of my L/C Meter
Kits for the magazine ($100 value).

Subject: WTB manual for TS-850

Try www.w7fg.com. He has manuals for Kenwood radios. BE VERY CAREFUL if
you order a manual from Howard W. Sams!
These guys will sell you a poorly photocopied, expensive collection of
loose sheets. I had three sheets for my TS-430 that were impossible to
read, and they insisted I send them back for replacement. Normally that
wouldn't be a problem, but it took six weeks to get the manual in the
first place, and another six weeks to get the replacements. They were
barely any better than the first ones.

From: thompson@mindspring.com
Message-ID: <8kntdt$9sn$1@slb0.atl.mindspring.net>
Source record: 63944

Sorry for the bandwidth here but I have tried for two days to get on the ten tec reflector at qth.com.

I have been using a Ten Tec 262G power supply to power a 2 meter rig and small amp but lightening
got into it last spring and I finally got a replacement. The problem is the schematic and the original 262G came with a 6 pin jones plug (into the PS). This model comes with a 4 pin molex. The molex plug is not a standard molex. I can probably get the molex from Ten Tec but does anyone know the pin out for the plug. I know the 252G has a 4 pin plug but is it the same pin out? I need the pin out from right to left facing the rear of the PS.

Thanks for any help.

Source record: 63945

For Sale: Johnson 500 RF deck & original Johnson Manual.
Case was glass beaded, powder coated and is ready for Johnson Maroon paint. Front is in OK shape. Has scratches around edges and some scrathces on front. Nothing Obscene though. All knobs are there but a couple are missing white pointers. The deck appears totally stock except the clipper circuit looks like it was bypassed for better fidelity audio. This mod was common on many 500's and Valiants. I have had it for awhile and hooked it up to a friends 500 PS/Modulator when I bought it and it worked fine. All tubes are good including 4-400 final. I was going to build a killer PS/Modulator for it but too many projects- not enough time. New motorcycle forces sale. Serious inquiries only- no trades, no hagglers, no tire kickers. I am not giving it away considering a 500 with PS/Mod sold on Ebay for $2000 awhile back. First $800+ shipping takes it. You can check it out in person near Philly if you like.
Thanks,
Jim

That is not normal. I owned a 215X. Sounds like the bias for the final transistors is too high or there some other problem with the PA section.

Gary

From: DUNCAN WALTERS <tesla@cwcom.net>
Message-ID: <396EDCFB.206E8BF9@cwcom.net>
Source record: 64024

Can anyone help?
I am looking for a replacement relay for
my Sommerkamp FT250 (Yaesu FT200)
transceiver. It is a 4 pole changeover plug-in
type with a 12v DC 1000 Ohms coil.
Physical size is 29 mm high by 18 mm wide
by 27 mm deep. It has 4 horizontal rows of
of 3 tags.
The two coil tags are sited near one end of the
base.
Substitution with a relay having a lower coil resistance
is not practical as it necessitates a higher current which
the supply struggles to deliver.
Has anyone got one lurking around, or can anyone
suggest a source?
Any assistance will be greatly appreciated.
Please reply soon.
Best regards,
Duncan G4DFV

EMailed to me, source unknown

Folks,
Read this touching missive, which is followed by my testimonial - might be worth a smile, but then again...

Subject: FW: A Thousand Marbles - Please read this

<< This is perhaps one of the most noteworthy hunks of e-mail I have received to date. It's worth a serious read and a
count of your personal inventory of marbles... :-)

A Thousand Marbles
The older I get, the more I enjoy Saturday mornings. Perhaps it's the quiet solitude that comes with being the first to rise,
or maybe it's the unbounded joy of not having to be at work. Either way, the first few hours of a Saturday morning are
most enjoyable. A few weeks ago, I was shuffling toward the basement shack with a steaming cup of coffee in one hand
and the morning paper in the other.
What began as a typical Saturday morning turned into one of those lessons that life seems to hand you from
time to time. Let me tell you about it. I turned the dial up into the phone portion of the band on my ham radio in order
to listen to a Saturday morning swap net.
Along the way, I came across an older sounding chap, with a tremendous signal and a golden voice. You know
the kind, he sounded like he should be in the broadcasting business. He was telling whoever he was talking with something
about "a thousand marbles".
I was intrigued and stopped to listen to what he had to say. "Well, Tom, it sure sounds like you're busy with your job.
I'm sure they pay you well but it's a shame you have to be away from home and your family so much. Hard to believe a
young fellow should have to work sixty or seventy hours a week to make ends meet. Too bad you missed your daughter's
dance recital." He continued, "Let me tell you something Tom, something that has helped me keep a good perspective
on my own priorities." And that's when he began to explain his theory of a "thousand marbles." "You see, I sat down
one day and did a little arithmetic. The average person lives about seventy-five years.
I know, some live more and some live less, but on average, folks live about seventy-five years." "Now then, I multiplied
75 times 52 and I came up with 3900 which is the number of Saturdays that the

average person has in their entire lifetime.
Now stick with me Tom, I'm getting to the important part." "It took me until
I was fifty-five years old to think about all
this in any detail", he went on, "and by that time I had lived through over
twenty-eight hundred Saturdays.
I got to thinking that if I lived to be seventy-five, I only had
about a thousand of them left to enjoy."
So I went to a toy store and bought every single marble they had. I ended up
having to visit three toy stores to round-up
1000 marbles. I took them home and put them inside of a large, clear plastic
container right here in the shack next to
my gear. Every Saturday since then, I have taken one marble out and thrown it
away." "I found that by watching the marbles
diminish, I focused more on the really important things in life. There is
nothing like watching your time here on this earth
run out to help get your priorities straight."
"Now let me tell you one last thing before I sign-off with you and
take my lovely wife out for breakfast.
This morning, I took the very last marble out of the container. I
figure if I make it until next Saturday then I
have been given a little extra time. And the one thing we can all use is a
little more time." It was nice to meet you Tom,
I hope you spend more time with your family, and I hope to meet you again
here on the band. 75 year Old Man,
this is K9NZQ, clear and going QRT, good morning!"
You could have heard a pin drop on the band when this fellow signed
off.
I guess he gave us all a lot to think about. I had planned to work on the
antenna that morning, and then I was going to
meet up with a few hams to work on the next club newsletter. Instead, I went
upstairs and woke my wife up with a kiss.
"C'mon honey, I'm taking you and the kids to breakfast."
"What brought this on?" she asked with a smile. "Oh, nothing special,
it's just been a long time since we spent
a Saturday together with the kids. Hey, can we stop at a toy store while
we're out? I need to buy some marbles!
HAVE A GREAT WEEKEND AND MAY ALL YOUR SATURDAYS BE SPECIAL!!!!!!! >>

MY TESTIMONIAL:
Wow,

Words to live by - a philosophy to embrace. Especially as I am in my
mid-life crisis.
So that is what I did. I figured just how many marbles I needed ....
where is that calculator when you need it?
I went to buy the marbles, went to the toy stores at the mall,
several times. Got detained by mall security on suspicion of being a child
molester, and had to spend one marble (Saturday) to explain it to the
police. One marble down.
Still needed more marbles, so the next Saturday the search went on.
Only a few marbles available. Another marble down.

During the week, I had a great idea. I will use those clear marbles that floral arrangers use! Why limit myself to toy stores, I will go to the craft shops! Managed to get a load of those floral marbles, in a nice cardboard box. Except it was pouring rain, the marbles heavy, the box flimsy, and me parked uphill about a block away. Yup, the box busted, the marbles rolled off downhill. Another marble down. And me a lot of marbles short.

While at work, I had another idea. I needed more marbles. Where would I get them? I know - E-Bay! Except I got caught by my boss while I was surfing on company time (that S.O.B) Had to work Saturday to make up the time - another marble. But while I working - went and surfed and found a marble supplier on the net. Ordered what I needed. 2 more marbles spent waiting for that 'guaranteed Saturday delivery' C.O.D.

Another marble spent counting up the right amount of marbles.

Now I had nothing clear to put them in. (So that I could watch them diminish) Another marble spent looking for something to put them in.

Finally got them into a large enough jug. Put the jug on my glass top night stand, which shattered under the weight. The jug busted, the marbles scattered, and the dog then ate some of the marbles, you guessed it - a marble wasted at the veterinarians, a marble wasted re-counting all the marbles as they had spilled and another marble spent at the furniture store buying a replacement night stand.

One more marble went when my live-in exotic dancer girlfriends delinquent son put his grandmothers glass eye into the jug. I thought it was a heart attack, and had to go to the hospital. Ever look an eye in the eye when you held it in your hand at 6:00 am on a Saturday morning when you have a hang-over?

All was going along well, when I noticed that the marbles were going fast, much faster than seemed possible. Turns out my now ex-girlfriend (who is a real looker but light on the brains) found herself a new man, and decided to get rid of me by moving the marbles off faster, hoping I would die earlier. Another marble shot as I threw her stuff onto the lawn and changed the locks on the doors.

As I can testify, those marbles changed my life and proved to me the value of those wasted days spent on marbles..

Contact me if you want to purchase marbles, a lot of marbles.

Great idea.....however....perhaps....instead of marbles you could use
slips of paper? May save some furniture that way.

1876. FS:CLEGG 22er AM RIG

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-14 00:00:00 UTC
From: jimmoci@aol.com
Message-ID: <20000714123800.12971.00000125@ng-ci1.aol.com>
Source record: 64033

For Sale: Clegg 22er AM Transceiver
Very good cosmetic shape. Will look nice next to your boatanchor rigs. Works great, Very sensitive; Hears everything my modern FM rig hears (of course not quite as clear because I am listening on AM). Comes with 3 crystals 146.105, 144.450, 145.350. Does not come with a mic- keeping the D-104 for my Collins stuff but it sure does sound good with and old unamplified D-104. Also has Instruction manual with schematic. $99 shipped anywhere in the Continental U.S.

Tnx,
Jim

I have some slugs that might fit the bill.. One is 1/4" dia and 3/8"
long with fine pitch threads and hex core.
The other is same diameter and a little over 1/2" long with courser
pitch threads and hex core. I'm guessing that the course pitch threads
are about 24 tpi and the fine pitch 40 tpi. Does this sound about
right, and are one or two enough?

> Does anyone recall the radio used on the Sky King TV show?

I seem to recall some radios on the desk, and also some rack-mount gear
to the right of the desk. Looked like a rig you could talk to Mars on,
but he only ever talked to the sheriff in the next town.

Mike, N4PDY

1883. FS: NATIONAL SW-3 RCVR

Source record: 64040

NATIONAL model SW-3 RECEIVER from the 1930's. in excellent condition. This is a version 2 model set up for 6 volt operation. The tubes in this radio are 37, 77, 78. A spare set of tubes is included! The matching National "doghouse" power supply comes with this rig. Three coil sets are included - all original NC coil sets (#61 #62 and #65). A set of Brandes headphones from about 1925 is included - also an interesting article by Bill Orr, W6SAI from the July 1971 issue of CQ Magazine that has a schematic & other useful data. Price for all is $525 plus s & h from Schenectady, NY- it's in excellent physical & electrical condition (ask me for a picture)!

>>

Well, no. There would be radio links at "higher" HQs. There just wouldn't
likely be radio links at the unit level, i.e. at the 4077th MASH.

They would have tactical radios, but they wouldn't be connected to the
phone system.

A typical scenario would be: A person picks up a field phone at a unit and
cranks it. The unit switchboard (a small one) would answer the ring and
patch the call to the Battalion switchboard (a bigger one). The link from
the unit to Battalion is most likely wire. The Battalion operator would
patch the call to a higher HQ, such as Corp or Army. This link could be
either wire or radio depending on the situation. At this point, the call
would go by radio state side. Once state side, the call would get patched
into the commercial phone system and dialed by the state side operator.

That's for an "official" call from the field phone to a state side commercial
phone.

Personal calls via the MARS ham system are different.

You would go to the MARS shack and you would be directly talking into a
radio with the MARS operator handling the controls. Small units usually
didn't have a MARS station unless there just happened to be some motivated
hams in the unit and some equipment available to them. In larger, battalion
and above, units there would likely be an officially supported MARS station.

Keep in mind MASH is a TV show. If it were reality, they would have a First Sargent doing most of the stuff Radar and the CO were doing. You ever see mention of a First Sargent on MASH?

Subject: Cleaning up old Heathkits?

What do you all recommend to clean up/polish etc. old Heathkits? I just got an Apache (TX-1) and Mohawk (RX-1) circa 1959 in really nice shape. This is the era where the knobs were not glossy/shiny as in later versions according to Chuck Penson author of the Heathkit book. Jim

From: n2ey@aol.com (N2EY)
Subject: FS: Box of 17 ARC-5 Variable Capacitors

Hello Folks,

A few months back, I offered some variable capacitors for sale, and made a deal with someone for 17 of them. Unfortunately, through no fault of his own, he was unable to complete the deal. However, I packed them up for shipping while waiting, and they've been sitting in the box ready to ship for almost four months now.

So here's the deal: I'm offering the entire lot of 17 capacitors for $30 plus shipping from 19087 - that's an average price of less than $2 each. Of course some are more valuable than others, and condition varies from excellent to poor. (I just don't want to have to unpack and repack them all over again).

Here's a detailed list:

Oscillator tuning capacitor #5032 (from ARC-5 transmitter) - Single section variable, 30-150 pF. 16 rotor and 16 stator plates, .0625" spacing. Has beautiful 100:1 reduction gearing with antibacklash gears, but no dial. 2-5/8" high, 4" wide, 2-3/4" deep, with 3/16" shaft. Used, good to very good condition. Total of 5 of these, 3 with the flexible coupling shaft, 2 without.

Oscillator padding capacitor #4990 (from BC-459 transmitter) - Single section variable, as used in Command set transmitters. Has rotor lock and temperature compensator. Very good condition. Have 4 of these, all from BC-459s.

Oscillator padding capacitor #4990 (from ARC-5 transmitters) - Single section variable, as used in various Command set transmitters. No rotor lock. Fair to poor condition, need cleaning. Have 2 of these.

Amplifier padding capacitor (from ARC-5 transmitters) - Single section variable, as used in various Command set transmitters. With rotor lock. Very good condition. Have 1 of these.

Amplifier padding capacitor (from ARC-5 transmitters) - Single section variable, as used in various Command set transmitters. No rotor lock. Good condition. Have 1 of these.

Amplifier padding capacitor (from ARC-5 transmitters) - Single section variable, as used in various Command set transmitters. No rotor lock. Fair to poor condition. Have 3 of these.

3-gang main tuning capacitor from BC-453 receiver. Has padders and trimmers, no dial. Good condition. Have 1 of these.

Total weight of package 22 pounds. 17 capacitors in all. All packed up and ready to go - but you gotta take the whole pile!.

From: Chris <cvierno@netzero.net>
Subject: FS: Russian LB radio - 6M dash mount

New working Russian LB set with all accessories & cables except antenna rod. 1 channel on 41.30 Mhz, range 33-57.5 Mhz with some component changes. Has telset style mic/earphone, ext speaker. and 1450 Hz signalling which blasts audio wide open when enabled(?) or normal noise squelch. Model 'LEN-V 1P21V' about 10x10x2.4", in a cast aluminum case

(real solid). 12V supply, TX about 10 watts, RX sensitivity (12dB
SINAD) was about 0.2 uV, although the manual's spec is 1.0 uV.
A copy of the manual is included, but it's in Russian, the parts lists
& schematic are self-explanatory. Apparently made for hose&gun (NKVD?)
service as the book shows installations in Gaz 24 / 69 and a K-700
tractor. You can be the first and ONLY to have one on 6M! Real clean
layout inside, lots of room and QC paint dots. Email for pix.
$175 + shipping

Subject: Jimmy NO'Brain makes friends at the FCC

FCC Amateur Radio Enforcement Log
July 6, 2000
HIRAM, GA: The FCC on June 28, 2000, sent a Warning Notice to General licensee James V. O'Brien III, W4AMP, and a Notice of Intent to designate O'Brien's Amateur Radio station license for a revocation hearing and his operator license for suspension for the remainder of its term. FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth said monitoring information before the Commission dating from January of this year indicates that the licensee is "seriously misinformed about the basis and purpose" of Amateur Radio and about the FCC's enforcement of the prohibition against obscene or indecent transmissions. The FCC alleges the offending transmissions took place on 3894.5 kHz, 144.35 MHz and 223.5 MHz. Hollingsworth said if the alleged operation recurs, the FCC would designate W4AMP for a revocation hearing and O'Brien's General license for suspension. Hollingsworth noted that the FCC's rules prohibit transmitting obscene or indecent words or language and that, for indecency purposes, the FCC uses the same standard for commercial and amateur transmissions. "Obscene speech is not protected by the First Amendment and cannot be broadcast at any time," Hollingsworth said in the letter, which also defined and detailed the proscriptions against indecent and obscene transmissions. In a lengthy e-mail response to Hollingsworth that he shared with the ARRL and others, O'Brien vigorously denied making any obscene transmissions. He said he keeps a "complete and accurate log" of his radio operations and would "gladly submit it for inspection." Additionally, O'Brien said, he has not operated on 3894.5 kHz at all this year. He suggested that any profanity monitored on the two VHF frequencies cited by the FCC was directed at him by an ex-FCC employee who, O'Brien asserted, has been harassing him for more than four years. O'Brien pledged to operate "in full accordance" with FCC rules. He also requested that the FCC provide any recordings, log information, and FCC monitoring information it has regarding the present allegations.

Hi:

Please tell me about the Eldico SBA-1. Is that a Collins like receiver?
What is the physical condition? How much do you want for it? I have a
friend in Cheyenne, Wyo. who could pick it up.

Thanks, Colin K7FM

Subject: Northern Radio

Greetings, is there anyone out there that can supply my with some info on a
Northern Radio type # 735. I aquired this radio a few weeks ago and would
like to restore it but I have no schematic or any other info on this rig.
The radio a 5 in apearance inside and out but does work. The radio was
extensively modified for some reason and I would like to return it to stock
as much as possible. Any info would be helpful..... Thanks and 73..

Craig

I've been using USPS for anything less than 5 lbs since their 2 day priority is CHEAPER than UPS 3 day, sometimes HALF the price! I havn't yet looked to see where the break even point is, but UPS is cheaper for very heavy packages. For very light packages USPS 2 day is cheaper or only cents more than UPS ground!

I had an 80 lb laser printer delivered by UPS with the box smashed and peanuts leaking out. The printer was well packed so it was not damaged, although the lid of the paper tray was pulverized! I managed to put humpty dumpty back together again with lots of scotch tape, after the buy sent me a replacement. Maybe I learned something from this before I shipped a Kenwood 2KW linear via ups from FL to CA. I double boxed the sucker, used lots of bubble pack, foam, tape and peanuts. My buyer reported it arrived un scratched! I tried to duplicate the packing as shown in the manual, and go one better. I also used a VERY heavy box 'stolen' from work (used to ship heavy lab equipment). I also put the tubes in a separate box! Somehow the two parcels arrived together! UPS said it had to be well packed because they have had them fall off 2 story high converer belts! (WHY NO NET?)

Subject: Royal UPS screwjob

Speaking of UPS and damaged equipment.

This has nothing to do with UPS, but with handling equipment.

I had taken an early flight out of Boston to Chicago O'Hare (ORD), on my way to Midland Michigan (MBS). Yah, it is kinda the long way around and had I been one seat farther back in that DC-9, I'd have had a private room. We didn't even have a window that far back. All you could see from the next row forward was the engine nacelle.

As I sat there at O'Hare, killing a weekend that afternoon, watching them load baggage, I spotted a handler grab a guitar case from the cart and throw it up onto the conveyor in the middle of torrential rain.

The bright markings on the case identified it as mine.<sigh>
Thing is when he threw the case up on the conveyor, he missed.
The case just kinda bounced off and kept going and landed about 15 feet the other side of the conveyor.

Sure was a good thing that was a hard shell case. It only scraped up one
corner pretty bad, but the Guitar was not hurt and it was still dry.

As to UPS, my daughter who has a business has switched to Fed X

Hello fellow Swan Two-Drifty Owner,
I've owned aone of the above radios for about 6 years now and the manual says
not to do what you did whilist keying the radio. Why? I don't honestly know.
I do enjoy operating my Swan though and you should get an honest 125 watts or
so output with a fresh pair of 6146-B's.
73 and good luck.

I am getting tired of reading posts three times, Are you? I think that
maybe it is time to merge the:

rec.radio.amateur.equipment
rec.radio amateur.boatanchors
rec.radio.swap

into one group and call it something like:

rec.radio.amateur.forsale

Any comments and how does one go about getting this done if there is a
general feeling of why not. Sane comments only please.

What you'd probably end up with would be one more NG for the cross posting.
With 4 established groups, people would just add the new one to the list.

What happens is that people want to hit any crowd that might be interested
in their equipment. Or any group that might have the equipment in which they
are interested.

I'm answering this post on "boatanchors", I most likely will not even see
any remarks on any of the other newsgroups to which you've posted. So,
cross posting does have some disadvantages.

One solution is to get a news reader that is smart enough to delete
crossposts that you have already read. Agent is such a reader but it
will cost you a few bucks.

Subject: Tired of reading posts three times or more ??

Get a better newsreader. In Both Netscape News and Newswatcher once a
message is read in one group, it is marked as read in the other groups
it is cross-posted to (and doesn't appear, if you have your preferenes
set that way).

Subject: Warning! -- SONY SUBSTANDARD SERVICE

Anyone considering the purchase of a Sony peripheral for their computer might want to give it some further thought. There clearly is not a reciprocal relationship between what they sell and what they service.
-
I purchased a CD-RW drive back in April that just recently went bad (won't read). When I called Sony service, I was told that I could not get a replacement and that I had to ship it across the country to be "repaired" (and we all know what that means...) - with a three (3) week turnaround. Assuming that they keep their 3-week commitment, with shipping both ways, I'd be without the use of the unit for at least five weeks!!!
-
I hardly think that's reasonable or fair.
-
Compare this to HP, who under the same circumstances would simply ship you out a replacement unit and issue a call-tag for the old one.
-
Sony is a behemoth in the marketplace and as such, they have an obligation to scale their service facilities to meet demand. To not do so is an indication of their lack of commitment to customer satisfaction and an unwillingness to stand behind their products.

For Sale: Johnson 500 RF deck & original Johnson Manual.
Case was glass beaded, powder coated and is ready for Johnson Maroon paint. Front is in OK shape. Has scratches around edges and some scratches on front. Nothing Obscene though. All knobs are there but a couple are missing white pointers. The deck appears totally stock except the clipper circuit looks like it was bypassed for better fidelity audio. This mod was common on many 500's and Valiants. I have had it for awhile and hooked it up to a friends 500 PS/Modulator when I bought it and it worked fine. All tubes are good including the 4-400 final. I was going to build a killer PS/Modulator for it but too many projects- not enough time. I am not giving this one away considering one went on Ebay for $2000 awhile back. First $800+ shipping takes it.

Clegg 22er AM Transceiver. Very good cosmetic shape. Will look nice next to your boatanchor rigs. Works great. Very sensitive; Hears everything my modern FM rig hears (of course not quite as clear because it is AM). Comes with 3 crystals 146.105, 144.450, 145.350. Does not come with a mic- keeping the D-104 for my Collins stuff but it sure does sound good with and old unamplified D-104. Also has instruction manual with schematic. $75+ shipping

Collins 75A1 parts radio. Things that are missing:
Cabinet,
Round Kilocycle dial,
some sheild covers,
(1) RF coil,
It is 95% there. I plugged it in and it gets static but sensitivity is way down. It did a pull in a couple very strong stations but thats it. Cosmeticlly the front is ok with a bit of a wear mark around the tuning dial and some nicks. This is a definite project radio or could be a great source of parts for others but I have no time to part it out or restore it. $185+ shipping

I am near Philadelphia if anyone would like to inspect the gear.
I accept Money orders or Pay-Pal.
Thanks,
Jim

Mike,
I had a similar experience last year before we left Anchorage, Alaska. I had sent a Postal MO for $150 to a gentleman in upstate NY for a Motorola MTX-800 portable radio. It drug on for several months. I contacted the Postal Inspectors / US Attorneys office in Anchorage. They determined the case was wire fraud and were in the process of changing this gentlemen's life for the worst. I also was filing formal complaints against him with the NY State Attorney General's office, the Rochester District attorneys office. So at the last min I gave him a chance to send me a postal MO for $150 and all will be forgotten. Guess what a postal MO came express before the Friday deadline. His life was about to take a serious turn over $150 !!!
Anyway case closed, however the officials I spoke to US Attorneys office and Postal Service said they were looking for a case to make an example of for Internet fraud. Made no matter of $$ amount, just to make an example and send a Loud-Clear message to all scammers/theives.

You might try that approach, it was A LOT of paperwork but it got my $150 back.

Best of Luck.

If you mailed the check this is 'fraudulent use
of the US mails'
A federal crime.
Report him to the postal inspectors at your
local post office.
Let him know you are do so.

1894. Help - Naval Academy ham radio club in danger

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-15 00:00:00 UTC
From: k3for@aol.com
Message-ID: <20000714222941.20048.00000248@ng-fj1.aol.com>
Source record: 63957

Help!

I am looking for other Naval Academy graduates or US Naval personnel who can assist me in saving the amateur radio club at USNA.

I have been the officer rep for the past 2.5 years, but a decision was just made in the past 48 hours (over the summer while the mids are conveniently out at summer training or on leave) without notice or discussion, to disestablish the station W3ADO (also Navy MARS station NNN0NNN). Perceived lack of participation, lack of knowledge of our various missions and accomplishments ("oh, ham radio is dead..."), and funding probably played a role.

Mailing address for support letters:
Captain Sam Locklear, USN
Commandant of Midshipmen
101 Buchanan Road
US Naval Academy
Annapolis, MD 21402

cc me at:
Ryan "Skip" Johnson
510 Norton Lane
Arnold, MD 21012
k3for@aol.com
if you can

Or if you can't write a letter, please email me something and I will forward it to the Deputy Commandant by email.

Thank you ! I only hope its not too late -- I have to run down there and see if they've thrown out the gear already...

Dear Skip,

Just saw your note this evening and was very disturbed. I am the Trustee for the Boeing Employees' Amateur Radio Society - St. Louis, Home of the F/A-18 E/F Super Hornet !

We have a large club here at Boeing and have recently received outstanding support from the company in developing a highly capable HF-VHF Emergency Response Communications system including towers, antennas, etc. The Boeing Company is extremely supportive of Emergency Preparedness Activities and has approximately 11 amateur radio clubs throughout the corporation and additional "mini-response" stations located throughout the numerous Seattle facilities.

I will draft a letter of support for you this week . Please call me at work if you can, 314-232-5273 or e-mail at s.d.propper@boeing.com.

73 and hope we can help (BTW, I worked your club from our club station, W0MA, just before your mids went on summer leave.

Dave, K2DP, St. Louis

NEW: Pay 50% now, 50% after filing! You won't get THESE arrangements anywhere else!

We'll NEVER throw you that tired old line which states: "Payment in full must be received BEFORE services will be performed..."!

We are now accepting applicants for the second LPFM filing window. We will only accept a limited number of applicants for the second LPFM filing window. To be one of the clients for the second filing window (Connecticut, Illinois, Kansas, Michigan, Minnesota, Mississippi, Nevada, New Hampshire, Puerto Rico, Virginia, Wyoming), go to our credit card acceptance page or contact us by whatever method you prefer from our contact page.

Some lessons soon to be learned by LPFM applicants: At LEAST four of the applications which will be returned as "flawed" are from applicants who assured me, personally, that they "can file this application without having to pay for any technical help"... Looks like they fell into an NAB sponsored(?) "dis-information" trap...

Why not post this question to alt.tv.mash? one of the shows producers
hangs around sometimes and can answer a lot of questions about the show.

From: "Ron in NC"
Subject: FRR-22 help needed

HI Gang,

We attended the Salisbury HamFest yesterday and like many
times before this small fest yielded several good finds.
There were a good number of BA's there and a nice looking
AN/FRR-22 followed me home, plus a stack of back issues

of "Electric Radio". Along with the FRR-22 came a full set of
the hard to find pencil tubes and some tech data for it.

The FRR-22 looks to be in very nice original condx.
When I tried to fire it up after getting it back home
and past the approving eyes of the XYL, I was surprised
to have it trip the circuit breaker when I plugged it in.
After taking it apart and checking everything and finding
no problems I remembered that the outlet I was plugging it into
was on a GFI circuit and so I tried it on a regular outlet and
it powered up without tripping the breaker.
The only problem I've found so far is that the audio output
is low and muddy sounding on AM (A1) but loud and clear
on SSB/CW (A3). Does anyone in the group have experience
with this radio and can give me some advice as to where
to this problem may be coming form?
Also does anyone have a spare gray Navy speaker that
would be correct for this receiver?

Thanks in advance for your help.

73,

Ron

From: "Norman Litsche"
Subject: FRR-22 help needed

Hi Ron,

I think this is the same as an SRR-12. Does it have a really exotic dial mechanism that uses a mirror?

Still have a couple of those in service.

Those were designed for shipboard power which was balanced above ground. There are filters connected from each side of the line to ground. Current thru one of these to ground is what caused your GFI to get upset. I run mine with an isolation transformer and use a couple of light bulbs in series with the 'centre-tap' connected to ground.

The bellcranks that move all the bandswitch and IF switchery is a big problem with these.

Capacitors are a problem too. That's possibly why your AM is muddy. The signal path that occurs in AM is different than the one that occurs when the BFO is used.

I have the mother of all manuals for this thing. Write further and we'll talk.

Yes, the FRR-22 is the shore station version of the shipboard SRR-12.

That's what I figured was the cause of the trip.

Since this thing is all modules maybe I can figure out which one is the
cause, I feel very lucky to have gotten a full set of tubes with it.

>
> I have the mother of all manuals for this thing. Write further and we'll

Subject: FRR-22 help needed

The audio output xformer is also a high-failure item. Mine (an FRR-23)
is still working OK but has had a number of caps and the audio xformer
replaced. Keep those pencil tubes!! They're getting a bit harder to
find.

From: "Ron Eisenbrey"
Subject: FS: Collins 75A-2 with 270G2 Speaker

I have a restored A2 and matching speaker that needs a new home. It is just too big for the available room remaining in the shack. This receiver has

all new electrolytic caps, a new metal can dual section electrolytic was put in the B+. All of the "black beauty" caps were replaced with modern caps. All resistors out of spec were replaced. All pots cleaned and lubricated, chassis received a thorough cleaning. All linkages, shafts, gears and bushings lubricated. A new drum dial was installed.

This is a late model A2, uses the 6CB6 RF amp and the 6BA7 mixers. This receiver has a crystal calibrator installed. Front panel is excellent and original, cabinet has been touched up. All knobs are original and none are broken. This receiver is not a collector's set but is a very excellent everyday user set. I would rate the overall condition as a 8.9 and you will find no dust or crud inside this set.

Receives AM very well but does not do well on SSB (It was not the intent of the Collins designers to make this receiver for SSB). The only thing that is not original on the chassis are three RCA phone plugs which were added to the rear panel. I left these installed although there is no wiring hooked to them. I believe a past owner may have used these jacks for an external product detector for SSB. These can be easily removed and plugged if desired.

Instruction manual with fold out schematic included. $950 for receiver and speaker plus shipping from 77478. I will not separate the receiver and speaker.

Thanks,

Ron, AB5WG

Hi Ron, good luck on selling the receiver. The speakers are going for alot of money. It's a shame you put so much work into the receiver and now are selling it. Are you keeping the 75S-1? Ever try Drake? You might like. You need to rent radios from me before spending a lot when buying. 73, Paul

From: "kx4rgc"
Subject: FS:SX62-A

Trying to thin out a few pieces I just don't use and since I have
a very nice SX-42, my SX-62A (essentially the same radio electrically)
is being offered for sale.
Works on all bands, has had some but not all tubular caps replaced,
and could probably use an alignment.
Cosmetically.....excellent front panel, excellent dial and glass, all knobs
correct and lettering excellent.
Cabinet has typical scratches but not bad...I would not be inclined to
repaint
it if I kept it.
With manual. Price $275
Would prefer not to ship but will do so at your expense....can meet someone
within a reasonable distance of Atlanta. Estimate of shipping weight would
be 65lbs from 30178.

Tnx and 73 !

Subject: GREAT LITTLE SPEAKER on sale

My local Radio Shack has a nice little wood case 4" speaker (all black) on sale
for under $10. looks real professional.
Hooked to my Icom R-71 it sounds far better than the internal one.
Should work with any radio; I plan to buy more to hook to other sets and just
line them up on a shelf. Size is 5"x5"x5" and sounds good on music too.
Model number is 40-1991 and is on page 132 of new catalog. Might be able to
order by mail/phone...I don't know

From: "Jim Roik"
Subject: Grounding old Heathkits?

Hi Jim.

When I did my Apache I did not want to modify it by drilling holes but I did
want to go to a three wire plug. What I did was to use a minibox in which I
mounted the fuse and brought in the three wire cord. I then ran the 120 V
and the ground to the Apache. The 120 went to where the original connections
were and the ground went to the chassis. I'm not using the original plug but

feel a lot safer.

Good luck.

Jim

From: rlmobley@aol.com (RLMobley)
Subject: SWAN RADIO HELP!!

This switch controls where the metering circuit is sampling. In the output position, you will measure relative output power. In the CATH position, you will be measuring Cathode current of the 6146B tubes. I didn't see anywhere in the book where switching the switch during transmit would cause problems. In looking at the schematic the cathode of the 6146's are fed to ground through a pair of 1-ohm resistors; the meter, through the switch selector, is placed across the 1-ohm pair with a 180-ohm in series with meter. All that to say that it wouldn't significantly change the value of two 1-ohm reisistors in parallel to ground. In my opinion you should look for another reason for blowing the tubes.

The only thing I see that does this is to set the reader to "delete Messages
when read" and I don't want to delete them, just not show them.

I have it set not to show read messages, but the ones in other newsgroups
still show.

Subject: Atlas 210X Problem or Normal?

That is not normal. I owned a 215X. Sounds like the bias for the final
transistors is too high or there some other problem with the PA section.

Gary

Subject: FS:CLEGG 22er AM RIG

For Sale: Clegg 22er AM Transceiver
Very good cosmetic shape. Will look nice next to your boatanchor rigs. Works great, Very sensitive; Hears everything my modern FM rig hears (of course not quite as clear because I am listening on AM). Comes with 3 crystals 146.105, 144.450, 145.350. Does not come with a mic- keeping the D-104 for my Collins stuff but it sure does sound good with and old unamplified D-104. Also has Instruction manual with schematic. $99 shipped anywhere in the Continental U.S.

Tnx,
Jim

From: jimmoci@aol.com (Jim Moci)
Subject: FS:Johnson 500 RF Deck

For Sale: Johnson 500 RF deck & original Johnson Manual.
Case was glass beaded, powder coated and is ready for Johnson Maroon paint. Front is in OK shape. Has scratches around edges and some scrathces on front. Nothing Obscene though. All knobs are there but a couple are missing white pointers. The deck appears totally stock except the clipper circuit looks like it was bypassed for better fidelity audio. This mod was common on many 500's and Valiants. I have had it for awhile and hooked it up to a friends 500 PS/Modulator when I bought it and it worked fine. All tubes are good including 4-400 final. I was going to build a killer PS/Modulator for it but too many projects- not enough time. New motorcycle forces sale. Serious inquiries only- no trades, no hagglers, no tire kickers. I am not giving it away considering a 500 with PS/Mod sold on Ebay for $2000 awhile back. First $800+ shipping takes it. You can check it out in person near Philly if you like.
Thanks,
Jim

Subject: Ham radio lesson/Saturday AM nets

EMailed to me, source unknown

Folks,
Read this touching missive, which is followed by my testimonial - might be
worth a smile, but then again...

Subject: FW: A Thousand Marbles - Please read this

<< This is perhaps one of the most noteworthy hunks of e-mail I have received
to date. It's worth a serious read and a
count of your personal inventory of marbles... :-)

A Thousand Marbles
The older I get, the more I enjoy Saturday mornings. Perhaps it's the quiet
solitude that comes with being the first to rise,
or maybe it's the unbounded joy of not having to be at work. Either way, the
first few hours of a Saturday morning are
most enjoyable. A few weeks ago, I was shuffling toward the basement shack
with a steaming cup of coffee in one hand
and the morning paper in the other.
What began as a typical Saturday morning turned into one of those
lessons that life seems to hand you from
time to time. Let me tell you about it. I turned the dial up into the phone
portion of the band on my ham radio in order
to listen to a Saturday morning swap net.
Along the way, I came across an older sounding chap, with a
tremendous signal and a golden voice. You know
the kind, he sounded like he should be in the broadcasting business. He was
telling whoever he was talking with something
about "a thousand marbles".
I was intrigued and stopped to listen to what he had to say. "Well,

Tom, it sure sounds like you're busy with your job.
I'm sure they pay you well but it's a shame you have to be away from home and your family so much. Hard to believe a
young fellow should have to work sixty or seventy hours a week to make ends meet. Too bad you missed your daughter's
dance recital." He continued, "Let me tell you something Tom, something that has helped me keep a good perspective
on my own priorities." And that's when he began to explain his theory of a "thousand marbles." "You see, I sat down
one day and did a little arithmetic. The average person lives about
seventy-five years.
I know, some live more and some live less, but on average, folks live
about seventy-five years." "Now then, I multiplied
75 times 52 and I came up with 3900 which is the number of Saturdays that the average person has in their entire lifetime.
Now stick with me Tom, I'm getting to the important part." "It took me until I was fifty-five years old to think about all
this in any detail", he went on, "and by that time I had lived through over twenty-eight hundred Saturdays.
I got to thinking that if I lived to be seventy-five, I only had
about a thousand of them left to enjoy."
So I went to a toy store and bought every single marble they had. I ended up having to visit three toy stores to round-up
1000 marbles. I took them home and put them inside of a large, clear plastic container right here in the shack next to
my gear. Every Saturday since then, I have taken one marble out and thrown it away." "I found that by watching the marbles
diminish, I focused more on the really important things in life. There is nothing like watching your time here on this earth
run out to help get your priorities straight."
"Now let me tell you one last thing before I sign-off with you and
take my lovely wife out for breakfast.
This morning, I took the very last marble out of the container. I
figure if I make it until next Saturday then I
have been given a little extra time. And the one thing we can all use is a little more time." It was nice to meet you Tom,
I hope you spend more time with your family, and I hope to meet you again here on the band. 75 year Old Man,
this is K9NZQ, clear and going QRT, good morning!"
You could have heard a pin drop on the band when this fellow signed
off.
I guess he gave us all a lot to think about. I had planned to work on the antenna that morning, and then I was going to
meet up with a few hams to work on the next club newsletter. Instead, I went upstairs and woke my wife up with a kiss.
"C'mon honey, I'm taking you and the kids to breakfast."
"What brought this on?" she asked with a smile. "Oh, nothing special,
it's just been a long time since we spent
a Saturday together with the kids. Hey, can we stop at a toy store while we're out? I need to buy some marbles!

HAVE A GREAT WEEKEND AND MAY ALL YOUR SATURDAYS BE SPECIAL!!!!!!! >>

MY TESTIMONIAL:
Wow,

Words to live by - a philosophy to embrace. Especially as I am in my mid-life crisis.
So that is what I did. I figured just how many marbles I needed .... where is that calculator when you need it?
I went to buy the marbles, went to the toy stores at the mall, several times. Got detained by mall security on suspicion of being a child molester, and had to spend one marble (Saturday) to explain it to the police. One marble down.
Still needed more marbles, so the next Saturday the search went on. Only a few marbles available. Another marble down.
During the week, I had a great idea. I will use those clear marbles that floral arrangers use! Why limit myself to toy stores, I will go to the craft shops! Managed to get a load of those floral marbles, in a nice cardboard box. Except it was pouring rain, the marbles heavy, the box flimsy, and me parked uphill about a block away. Yup, the box busted, the marbles rolled off downhill. Another marble down. And me a lot of marbles short.
While at work, I had another idea. I needed more marbles. Where would I get them? I know - E-Bay! Except I got caught by my boss while I was surfing on company time (that S.O.B) Had to work Saturday to make up the time - another marble. But while I working - went and surfed and found a marble supplier on the net. Ordered what I needed. 2 more marbles spent waiting for that 'guaranteed Saturday delivery' C.O.D.
Another marble spent counting up the right amount of marbles.
Now I had nothing clear to put them in. (So that I could watch them diminish) Another marble spent looking for something to put them in.
Finally got them into a large enough jug. Put the jug on my glass top night stand, which shattered under the weight. The jug busted, the marbles scattered, and the dog then ate some of the marbles, you guessed it - a marble wasted at the veterinarians, a marble wasted re-counting all the marbles as they had spilled and another marble spent at the furniture store buying a replacement night stand.
One more marble went when my live-in exotic dancer girlfriends delinquent son put his grandmothers glass eye into the jug. I thought it was a heart attack, and had to go to the hospital. Ever look an eye in the eye when you held it in your hand at 6:00 am on a Saturday morning when you have a hang-over?
All was going along well, when I noticed that the marbles were going fast, much faster than seemed possible. Turns out my now ex-girlfriend (who is a real looker but light on the brains) found herself a new man, and decided to get rid of me by moving the marbles off faster, hoping I would die earlier. Another marble shot as I threw her stuff onto the lawn and changed the locks on the doors.
As I can testify, those marbles changed my life and proved to me the value of those wasted days spent on marbles..
Contact me if you want to purchase marbles, a lot of marbles.

From: k3for@aol.com (K3for)
Subject: Help - Naval Academy ham radio club in danger

Help!

I am looking for other Naval Academy graduates or US Naval personnel who can
assist me in saving the amateur radio club at USNA.

I have been the officer rep for the past 2.5 years, but a decision was just
made in the past 48 hours (over the summer while the mids are conveniently out

at summer training or on leave) without notice or discussion, to disestablish the station W3ADO (also Navy MARS station NNN0NNN). Perceived lack of participation, lack of knowledge of our various missions and accomplishments ("oh, ham radio is dead..."), and funding probably played a role.

Mailing address for support letters:
Captain Sam Locklear, USN
Commandant of Midshipmen
101 Buchanan Road
US Naval Academy
Annapolis, MD 21402

cc me at:
Ryan "Skip" Johnson
510 Norton Lane
Arnold, MD 21012
k3for@aol.com
if you can

Or if you can't write a letter, please email me something and I will forward it to the Deputy Commandant by email.

Thank you ! I only hope its not too late -- I have to run down there and see if they've thrown out the gear already...

Subject: Help - Naval Academy ham radio club in danger

Dear Skip,

Just saw your note this evening and was very disturbed. I am the Trustee for the Boeing Employees' Amateur Radio Society - St. Louis, Home of the F/A-18 E/F Super Hornet !

We have a large club here at Boeing and have recently received outstanding support from the company in developing a highly capable HF-VHF Emergency Response Communications system including towers, antennas, etc. The Boeing Company is extremely supportive of Emergency Preparedness Activities and has approximately 11 amateur radio clubs throughout the corporation and additional "mini-response" stations located throughout the numerous Seattle facilities.

I will draft a letter of support for you this week . Please call me at work if you can, 314-232-5273 or e-mail at s.d.propper@boeing.com.

73 and hope we can help (BTW, I worked your club from our club station, W0MA, just before your mids went on summer leave.

From:
Subject: Help with Ten Tec PS

Sorry for the bandwidth here but I have tried for two days to get on the ten tec reflector at qth.com.

I have been using a Ten Tec 262G power supply to power a 2 meter rig and small amp but lightening
got into it last spring and I finally got a replacement. The problem is the schematic and the original 262G came with a 6 pin jones plug (into the PS). This model comes with a 4 pin molex. The molex plug is not a standard molex. I can probably get the molex from Ten Tec but does anyone know the pin out for the plug. I know the 252G has a 4 pin plug but is it the same pin out? I need the pin out from right to left facing the rear of the PS.

Thanks for any help.

I have some slugs that might fit the bill.. One is 1/4" dia and 3/8" long with fine pitch threads and hex core.
The other is same diameter and a little over 1/2" long with courser pitch threads and hex core. I'm guessing that the course pitch threads

are about 24 tpi and the fine pitch 40 tpi. Does this sound about
right, and are one or two enough?

Are you going to sell the extra
marbles or are they going on ebay right away?

Radiomatt wrote:

EMailed to me, source unknown

Folks,

Read this touching missive, which is followed by my testimonial - might be

worth a smile, but then again...

Subject: FW: A Thousand Marbles
- Please read this

<< This is perhaps one of the most noteworthy hunks of e-mail I have received

to date. It's worth a serious read and a

count of your personal inventory of marbles... :-)

A Thousand Marbles

The older I get, the more I enjoy Saturday mornings. Perhaps it's the quiet

solitude that comes with being the first to rise,

or maybe it's the unbounded joy of not having to be at work. Either way, the

first few hours of a Saturday morning are

most enjoyable. A few weeks ago, I was shuffling toward the basement shack

with a steaming cup of coffee in one hand

and the morning paper in the other.

What began as a typical
Saturday morning turned into one of those

lessons that life seems to hand you from

time to time. Let me tell you about it. I turned the dial up into the phone

portion of the band on my ham radio in order

to listen to a Saturday morning swap net.

Along the way, I came across
an older sounding chap, with a

tremendous signal and a golden voice. You know

the kind, he sounded like he should be in the broadcasting business. He was

telling whoever he was talking with something

about "a thousand marbles".

I was intrigued and stopped
to listen to what he had to say. "Well,

Tom, it sure sounds like you're busy with your job.

I'm sure they pay you well but it's a shame you have to be away from
home and

your family so much. Hard to believe a

young fellow should have to work sixty or seventy hours a week to make
ends

meet. Too bad you missed your daughter's

dance recital." He continued, "Let me tell you something Tom, something
that

has helped me keep a good perspective

on my own priorities." And that's when he began to explain his theory
of a

"thousand marbles." "You see, I sat down

one day and did a little arithmetic. The average person lives
about

seventy-five years.

I know, some live more and
some live less, but on average, folks live

about seventy-five years." "Now then, I multiplied

75 times 52 and I came up with 3900 which is the number of Saturdays
that the

average person has in their entire lifetime.

Now stick with me Tom, I'm getting to the important part." "It
took me until

I was fifty-five years old to think about all

this in any detail", he went on, "and by that time I had lived through
over

twenty-eight hundred Saturdays.

I got to thinking that if
I lived to be seventy-five, I only had

about a thousand of them left to enjoy."

So I went to a toy store and bought every single marble they had.
I ended up

having to visit three toy stores to round-up

1000 marbles. I took them home and put them inside of a large, clear plastic

container right here in the shack next to

my gear. Every Saturday since then, I have taken one marble out and thrown it

away." "I found that by watching the marbles

diminish, I focused more on the really important things in life. There is

nothing like watching your time here on this earth

run out to help get your priorities straight."

"Now let me tell you one
last thing before I sign-off with you and

take my lovely wife out for breakfast.

This morning, I took the
very last marble out of the container. I

figure if I make it until next Saturday then I

have been given a little extra time. And the one thing we can all use is a

little more time." It was nice to meet you Tom,

I hope you spend more time with your family, and I hope to meet you again

here on the band. 75 year Old Man,

this is K9NZQ, clear and going QRT, good morning!"

You could have heard a pin
drop on the band when this fellow signed

off.

I guess he gave us all a lot to think about. I had planned to work on the

antenna that morning, and then I was going to

meet up with a few hams to work on the next club newsletter. Instead, I went

upstairs and woke my wife up with a kiss.

"C'mon honey, I'm taking you and the kids to breakfast."

"What brought this on?"
she asked with a smile. "Oh, nothing special,

it's just been a long time since we spent

a Saturday together with the kids. Hey, can we stop at a toy
store while

we're out? I need to buy some marbles!

HAVE A GREAT WEEKEND AND MAY ALL YOUR SATURDAYS BE SPECIAL!!!!!!! >>

MY TESTIMONIAL:

Wow,

Words to live by - a philosophy
to embrace. Especially as I am in my

mid-life crisis.

So that is what I did.
I figured just how many marbles I needed ....

where is that calculator when you need it?

I went to buy the marbles,
went to the toy stores at the mall,

several times. Got detained by mall security on suspicion of
being a child

molester, and had to spend one marble (Saturday) to explain it to the

police. One marble down.

Still needed more marbles,
so the next Saturday the search went on.

Only a few marbles available. Another marble down.

During the week, I had a
great idea. I will use those clear marbles

that floral arrangers use! Why limit myself to toy stores, I
will go to the

craft shops! Managed to get a load of those floral marbles, in
a nice

cardboard box. Except it was pouring rain, the marbles heavy,
the box

flimsy, and me parked uphill about a block away. Yup, the box
busted, the

marbles rolled off downhill. Another marble down. And me
a lot of marbles

short.

While at work, I had another
idea. I needed more marbles. Where

would I get them? I know - E-Bay! Except I got caught by
my boss while I

was surfing on company time (that S.O.B) Had to work Saturday
to make up the

time - another marble. But while I working - went and surfed
and found a

marble supplier on the net. Ordered what I needed. 2 more
marbles spent

waiting for that 'guaranteed Saturday delivery' C.O.D.

Another marble spent counting
up the right amount of marbles.

Now I had nothing clear
to put them in. (So that I could watch them

diminish) Another marble spent looking for something to put them
in.

Finally got them into a
large enough jug. Put the jug on my glass

top night stand, which shattered under the weight. The jug busted,
the

marbles scattered, and the dog then ate some of the marbles, you guessed
it -

a marble wasted at the veterinarians, a marble wasted re-counting all
the

marbles as they had spilled and another marble spent at the furniture
store

buying a replacement night stand.

One more marble went when
my live-in exotic dancer girlfriends

delinquent son put his grandmothers glass eye into the jug. I
thought it was

a heart attack, and had to go to the hospital. Ever look an eye
in the eye

when you held it in your hand at 6:00 am on a Saturday morning when
you have

a hang-over?

All was going along well,
when I noticed that the marbles were going

fast, much faster than seemed possible. Turns out my now ex-girlfriend
(who

is a real looker but light on the brains) found herself a new man,
and

decided to get rid of me by moving the marbles off faster, hoping I
would die

earlier. Another marble shot as I threw her stuff onto the lawn
and changed

the locks on the doors.

As I can testify, those
marbles changed my life and proved to me the

value of those wasted days spent on marbles..

Contact me if you want to
purchase marbles, a lot of marbles.

I seem to recall some radios on the desk, and also some rack-mount gear
to the right of the desk. Looked like a rig you could talk to Mars on,
but he only ever talked to the sheriff in the next town.

1922. Help with Abbott TR-4 ultra short wave transcvr

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-15 00:00:00 UTC
From: Don <don@webheat.com>
Message-ID: <3970C035.7B9C@webheat.com>
Source record: 63985

I picked up an Abbott Instruments model TR-4 ultra shortwave transmitter/receiver today. Does it need a separate power supply? What is the operating voltage? ac or dc? what is the power out? What is the oscillator input freq needed to operate it?

Anybody know anything about it? What was it used for? It's an old tube unit.

Any info would be appreciated.

Thanks de Don..N6NLX.

I have four (4) eye tubes that I woni¿½t be needing. They are used / tested pulls. I checked them on a Heathkit TC-2, and the triodes in all four tubes test good. The display is good on (1) 6E5 and (1) 6U5, and dim but still slightly visible on (1) 6E5 and (1) 6U5. I cani¿½t do an in-circuit test, since I don't have any equipment that uses these, so the buyer must take these display tubes "as-is". You can see a picture of the tubes at;

http://members.aol.com/ecc81/yardsale

$25 ALL, or trade for chassis mount compactron sockets

I recently noticed a pair of new boxed Eico VTVM meter movements on a clearance table at one of the local parts stores. Think they were marked for $15. I was digging out some tubes and transformers and decided that I'd try posting a note here since those things are both hard to find and hard to find buyer for them <g>.

If anyone needs them, let me know by email and I'll help you get your hands on them.

The Reciever is badged by H.H.E.E. which stands for Hai Hua
Electronics Enterprise (China) Corporation, but it was probably
designed and built by another manufacturer and re-badged.

Its a seriously professional 1980's comms RX.

Photo's are available at
http://www.corn2.freeserve.co.uk/rx-front.gif
http://www.corn2.freeserve.co.uk/rx-rear.gif

Model no. RX 1001A
==========
Sold New on 8th August 1980 by HHEE, I have the Users/Service Manual
in Chinese hyroglyphics.

pcb's are made by Hagenuk, amd all the components are of Western
European manufacture.

19" rack, 0.01Mhz to 29.99999Mhz, micro-processor controlled (8051)
tuneable by keypad or tuning knob in 100Hz or 10Hz steps, 40 memories,
Modes USB, LSB, DSB, CW, TELEX, with a Simplex/Duplex capability.
Filters from 100Hz to 8Khz.

I've tried a search on the web, and asked in the UK ng's.
Any help appreciated.
Thanks Mike W

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-16 00:00:00 UTC
From: WA2BAH@webtv.net
Message-ID: <15085-3971A1F9-2@storefull-156.iap.bryant.webtv.net>
Source record: 63856

Original 2 meter Gonset Communicator AM transceiver from the mid 1950's
in good condition. The tubes all checked OK & I had it on the air this
week. It transmits good quality AM and receives AM signals and also FM
repeaters by "slope" detection (tuning slightly off to one side). A
picture is available. Price is $85 for the transceiver.
I also have the matching Gonset 2 meter VFO/Audio Preamp. The price
for everything is $120 plus s & h from Schenectady, NY

Subject: Atlas 210X plug

Howdy all - I'm looking for a plug that fits into the aux connector in back of
the Atlas 210X...the connector looks like a standard, 9 pin miniature tube socket...anyone know if there's still any of these floating around? Tnx in advance. Jay, N3DQU.

Date: Tue, 11 Jul 2000 03:07:31 GMT
From: jim@snoopy.cmagic.com (Jim)
Subject: Atlas 210X Problem or Normal?

When the Atlas 210X in SSB mode and is keyed with the mic with mic gain and alc both set to zero, the heatsink seem to heat up rather quickly. Watt meter shows no output and scope shows no modulation. Within about 30 seconds the heat sink is too hot to touch. I wouldn't think it would get that hot with just the bias current. Anyone know if this is normal for this radio? Thanks.

Date: 11 Jul 2000 03:52:15 GMT
From: w4pqwhs@aol.com (W4pqw HS)
Subject: Atlas 210X Problem or Normal?

This is not normal, could be that Pa has lost bias,making finals draw too much current at idle. bias should be set so that finals draw about 1/2 amp as shown on front panel ammeter..if thats hard to read insert an external ammeter in the main DC line to the rig ,turn rig on ,that will show rec current in millamps,inSSB mode, key mic ,meter should increase a bit over 1/2 amp.check bias pot inside PA section and adjust as necessary to get the 1/2 amp idle current. if it is allowed to run any length of time in this overheat condition the output transistors will no doubt be destroyed.. good luck Harold W4PQW

Subject: Grounding old Heathkits?

Jim,

I'm a bit confused. Can you be a little more specific on what is a
'mini-box' and what kind of fuse you are using as far as rating goes; also
where do you bring in third line to this box? I then assume that you bring all
three leads into the tx. with the ground going to where on the chassis? Sorry
for asking some stupid questions, but I've been out of the electronics loop for
about 32 years since I was 16. Just now getting back into amateur radio with
the radios that I could only dream of as a kid. Any suggestions/advice that you
can offer in regard to the Apache and Mohawk will be greatly appreciated! I've
got the 1959 models. I just found an AK-5 speaker to go with the Mohawk.
Thanks! Jim

Subject: Help on National HRO-500 Receiver

Hello.....and help.

I have an HRO-500 that has the slug on the L-24 that needs to be
replaced. When I tried to calibrate the BFO output per the
manual, the core cracked and is now useless. I am unable to
adjust the BFO per the manual.

Does anyone have a "part out" radio that they can pull the core
from L-24 for me?

Any other suggestions?

Thanks in advance, I want to get this classic radio back on the
air!!

I don't know that particular part, but I'd think you could go through a few old coils and find one with a core similar, or the same.

I think you will find that if the core is a fairly close match is should work,
I'd try a few to see if it'd work rather than trying to find a complete part number L-24 transformer.

>Why do hams pre-judge and slander another like this title, with no knowledge
>of the facts?
"Little Jimmy" has been no stranger to the radio newsgroups. "This title" is merely reflective of his conduct hereabouts. A little trip down dejanews will illustrate his upstanding and well-mannered conduct here.

>This man is your brother.
Speak for yourself, pal.

>Many people are wrongly accused of many thigns in this life.
So? Your point is?

>This must be very inspiring to people thinking of entering the hobby
Oh, come on. Having a ham called to task for his actions should be very reassuring to anyone thinking of entering the hobby.

>and says much more about your character than his.
Well, since you're Little Jimmy's brother, that is more than we need to know about *your* character.

Come to think of it, your screen name seems more like one of little jimmy's sock puppets...

From: "Michael St. Angelo"
Subject: Sky King Radio

Does anyone recall the radio used on the Sky King TV show?

I remember the show aired in the late '50, early '60's.
It was a Western starring Kirby Grant, a flying cowboy who fought the
bad guys by flying a plane instead of riding a horse.

The radio was on a desk in this living room and was used to
communicate with various pilots and the law.

The show also featured Sky's nephew, who was pretty dense,
and his niece, Penny, who was quite a dish.

> 6146b tubes

Just from the description, I would say the output position samples some of
the RF out, rectifies it and displays it on the meter. In this position,
you would tune for max. CATH must read cathode current (plate+grid) and in
this position you would tune by successive dipping and loading the final Pi
net. There is absolutely no reason the finals would even "know" you were

moving this switch. I would guess at another problem- like keying down with
the finals not resonated.

Note which way pins 1&4 are oriented in your amplifier and hold each of the tubes horizontally so that these pins are in the same plane. If the greater dimension of the plate is vertical then the tube may be safely used in this position. The problem is that not all makers took care to glue the base on to the tube in the same position for every tube. The odds are, however that those sylvania 811's were actually made by RCA, in which case you have nothing to worry about. BTW are they 811 or 811A's. I think it's possible that only the 811A's were certified for horziontal operation. The problem is that of the hot filament saging and touching the grid, which won't happen if the filament wires are all in the same vertical plane.

Subject: Anyone recognise this reciever ?

The Reciever is badged by H.H.E.E. which stands for Hai Hua
Electronics Enterprise (China) Corporation, but it was probably
designed and built by another manufacturer and re-badged.

Its a seriously professional 1980's comms RX.

Photo's are available at
http://www.corn2.freeserve.co.uk/rx-front.gif
http://www.corn2.freeserve.co.uk/rx-rear.gif

Model no. RX 1001A
==========
Sold New on 8th August 1980 by HHEE, I have the Users/Service Manual
in Chinese hyroglyphics.

pcb's are made by Hagenuk, amd all the components are of Western
European manufacture.

19" rack, 0.01Mhz to 29.99999Mhz, micro-processor controlled (8051)
tuneable by keypad or tuning knob in 100Hz or 10Hz steps, 40 memories,
Modes USB, LSB, DSB, CW, TELEX, with a Simplex/Duplex capability.
Filters from 100Hz to 8Khz.

I've tried a search on the web, and asked in the UK ng's.
Any help appreciated.

Good trace. The caps have been replaced. Face looks nice. Cabinet it slides
into could use some paint. No sig. showing on CRT. Maybe one of you guys
that knows more about these than I do can get it working good. Its defiantly
a nice little rig and worthy of attention. I don't know what to ask for it
so best offer gets it plus S.H. CONUS.

Subject: F.S. S-36 not 36A

Hi all. This is a S-36 not an S-36A. Its close to a 36A but its hard to find them with just S-36 embossed on the dial. I think the connections on the back are different than a 36A also. Works Great and looks great. Could use a good alignment but seems close. Nice face and knobs. Real nice radio. It weighs a ton!
$300.00 + S.H. CONUS from Calif. Zip-95901

Subject: FS / FT: EYE TUBES

I have four (4) eye tubes that I won't be needing. They are used / tested pulls. I checked them on a Heathkit TC-2, and the triodes in all four tubes test good. The display is good on (1) 6E5 and (1) 6U5, and dim but still slightly visible on (1) 6E5 and (1) 6U5. I can't do an in-circuit test, since I don't have any equipment that uses these, so the buyer must take these display tubes "as-is". You can see a picture of the tubes at;

http://members.aol.com/ecc81/yardsale

$25 ALL, or trade for chassis mount compactron sockets

If interested, please respond by email.

From: bcts1@aol.com (BCTS1)
Subject: FS:Collins,Johnson,Clegg

For Sale: Johnson 500 RF deck & original Johnson Manual.
Case was glass beaded, powder coated and is ready for Johnson Maroon paint. Front is in OK shape. Has scratches around edges and some scratches on front. Nothing Obscene though. All knobs are there but a couple are missing white pointers. The deck appears totally stock except the clipper circuit looks like it was bypassed for better fidelity audio. This mod was common on many 500's and Valiants. I have had it for awhile and hooked it up to a friends 500 PS/Modulator when I bought it and it worked fine. All tubes are good including the 4-400 final. I was going to build a killer PS/Modulator for it but too many projects- not enough time. I am not giving this one away considering one went on Ebay for $2000 awhile back. First $800+ shipping takes it.

Clegg 22er AM Transceiver. Very good cosmetic shape. Will look nice next to your boatanchor rigs. Works great. Very sensitive; Hears everything my modern FM rig hears (of course not quite as clear because it is AM). Comes with 3 crystals 146.105, 144.450, 145.350. Does not come with a mic- keeping the D-104 for my Collins stuff but it sure does sound good with and old unamplified D-104. Also has instruction manual with schematic. $75+ shipping

Collins 75A1 parts radio. Things that are missing:
Cabinet,
Round Kilocycle dial,
some sheild covers,
(1) RF coil,
It is 95% there. I plugged it in and it gets static but sensitivity is way down. It did a pull in a couple very strong stations but thats it. Cosmeticlly the front is ok with a bit of a wear mark around the tuning dial and some nicks. This is a definite project radio or could be a great source of parts for others but I have no time to part it out or restore it. $185+ shipping

I am near Philadelphia if anyone would like to inspect the gear.
I accept Money orders or Pay-Pal.
Thanks,
Jim

From: Don
Subject: Help with Abbott TR-4 ultra short wave transcvr

I picked up an Abbott Instruments model TR-4 ultra shortwave
transmitter/receiver today. Does it need a separate power supply? What
is the operating voltage? ac or dc? what is the power out? What is the
oscillator input freq needed to operate it?

Anybody know anything about it? What was it used for? It's an old tube
unit.

Any info would be appreciated.

Thanks de Don..N6NLX.

Message-ID: <slrn8n3sc5.62.ti2dll@ti2dll.penguinpowered.com>
Source record: 63865

Hi all,

About a year ago, we were given an antique radio which we have only a slight idea of what it is. It's pretty darn old from the looks of it... the radio has a small metal plaque which says the following:

A[]M
RA-1B
110D/30 3

(the [] is a crown symbol)

And another one which states:

AIRCRAFT RADIO RECEIVER
BENDIX RADIO CORPORATION
USA

Can anyone place this "aircraft radio receiver"? What are (or were :) it's capabilities? What was it used for? Does Bendix still exist? Anyone have diagrams for this thing? It'd be interesting to see if it still works, but we'd rather not risk the kind of electric shock that thing could generate it there was a short inside...

You might try replacing the shaping components for the circuit. There is a diode, resistor and capacitor network that generates a pulse to activate the vox. I assume you changed the relay tube already.

1953. HRO-500 Help

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-16 00:00:00 UTC
From: Jim Bo <jbollit@ix.netcom.com>
Message-ID: <3972307C.C1F8541F@ix.netcom.com>
Source record: 63871

Hello,

I am my own worst enemy.

I started to do an alignment on the HRO-500 and was adjusting the

L-24, the BFO transformer, and I cranked the core to far into the

coil form and it got stuck.
I tried various ways of freeing the core with the end result L-24

getting trashed.

With great pain, I removed L-24 and disassembled the transformer,

only to find that the plastic tube that is the coil form, broke
free of the base. This resulted in the coil form turning and
tearing the three wires from the pins of the transformer base.

Aarghhhhhhhh.....

I can clearly see three wires and hopefully will be able to
measure the inductance between the leads to determine what
winding is what ONLY if I am reading the schematic correctly.

When looking at L-24 on the schematic, it shows the transformer
tapped, with the tap going to the product detector. This tap is
shown to be near the bottom of the inductor symbol. Is it safe to

assume that the schematic representation is the same as how the
transformer is installed in the circuit, i.e., the winding with
the lower inductance is the tap?

Does anyone know the specs on L-24? Number of Turns? Where the
tap should be?
Who was the manufacturer? Was it JW Miller?
What was the manufacturers part number?

The metal can has two part numbers stamped in it. One is B-51334

which is the National part number, the other is 273F6523 which
may be the manufacturers part number.

As a real real long long shot, does anyone have an L-24?

I am determined to get the HRO-500 on the air again, but will
need some help from others.

Thanks for reading this post.

Jim

Source record: 63873
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors

For Sale: Heathkit DX-60 and HG-10, both the original models, not the later A or B versions. Work fine, full, stable output on all bands. Good condition, no rust, intact, all original knobs, front panels of both very nice. Cabinets could use a little work, but no dents or dings. Band drum on VFO is not cracked, which is rare. W7FG manual on DX-60 included.

Will throw in Heathkit MT-1 mobile transmitter in fair shape, knobs still shiny, untested, but intact. Need to make some room here.

$135 shipped for the lot.

Alan, N3BJ

1958. Manual for a T-368 Transmitter

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-16 00:00:00 UTC
From: "Richard D. Reese" <richardr@sssnet.com>
Message-ID: <39725768.75BFDF07@sssnet.com>
Source record: 63876

Sorting through some of the old stuff I found a copy of the Field Maintenance Manual for a T-368 transmitter. This is the one with the 4-400 final. It is complete with schematics.

I hate to just toss it out. I will give it away (FREE) to any one that needs it. I have not had the rig since back in the 70's.

From: gbowne <gbowne@email.msn.com>
Message-ID: <e99klh67$GA.281@cpmsnbbsa09>
Source record: 63880

I have an interesting chance to purchase some nice RCA AM transmitters from the 1940's to 1950's (and possibly earlier) in various stages of completeness very, very cheaply before they are broken up for parts and surplus.

First of all, does anyone know what models were made in that era and can give me the numbers and data?

I need manuals ; i.e. ; Parts, service, mainenance, owners, installation, etc.

Are original parts and tubes still available? If anyone has anything that will work with these transmitters email me with what you have and prices.

They will be made to go back on air by a local non profit AM radio station.

Thanks,
Gregory Bowne

My friend Al VE3AL had one of these in Canada and used it on 80 and 40 M in the early 1950s. I think that it is a communications and Direction finding coverage receiver. It was black and about 8" by 12" by about 24' long if I remember correctly. Al is still alive and in his 60s. He is a mad collector and I would think that he still has it around in his junk shack. He may even have a wiring diagram!

Subject: FOR SALE HENRY 2K CLASSIC X AMP

Let me quote from Henry:

"The 2K Classic X mates the reliable 2K Classic RF deck (with
several important improvements) to the heavy duty power supply
of the 3K Classic X. This amplifier is designed for the military or
commercial user who needs reliable operation in high duty cycle
circumstances."

2K Classic 1200 watts PEP
750 watts CW

2K Classic X 2000 watts PEP
1000 watts CW

Plate Voltage
2K Classic SSB: 3000-3200 VDC
CW: 2000-2200 VDC

2K Classic X SSB: 3700-3900 VDC
CW: 2700-2900 VDC

Hope this answers some of your questions

From: lbrty4us@aol.com (LBRTY4US)
Subject: Jimmy NO'Brain makes friends at the FCC

A sad, but not surprising, response. Attempting to correct a scorner is seldom
fruitful. Gossip of any kind profits no one, and surely no one can know
anything factual or certain about anyone else, via the internet, and words are
not "conduct." I don't think people would be attracted to a hobby run like a
democracy (i.e., 5 wolves & 2 sheep deciding together what's for dinner). Even
the email ID of the submitter is foul & scornful. Thread is off-topic, so I
yield to its futility, having shaken the mouse dung out of the chassis & seeing
that there isn't enough goodness left in the rig worth restoring.

>>Why do hams pre-judge and slander another like this title, with no knowledge
>>of the facts?

>"Little Jimmy" has been no stranger to the radio newsgroups. "This title" is
>merely reflective of his conduct hereabouts. A little trip down dejanews
>will
>illustrate his upstanding and well-mannered conduct here.

>>This man is your brother.

>Speak for yourself, pal.

>>Many people are wrongly accused of many thigns in this life.
>So? Your point is?

>>This must be very inspiring to people thinking of entering the hobby

>Oh, come on. Having a ham called to task for his actions should be very
>reassuring to anyone thinking of entering the hobby.

>>and says much more about your character than his.
>Well, since you're Little Jimmy's brother, that is more than we need to know
>about *your* character.

>Come to think of it, your screen name seems more like one of little jimmy's
>sock puppets...

From: kb6lwn@qsl.NET
Subject: Need info for building 90vdc PS

Hi All,

Anyone have comments/experience with putting together a low-
ripple stable regulated PS with 6.3vdc@~3A and 90vdc@~1A from
a primary of 117VAC (residential) ? Ask if you need more info.

What would be a good xfmr to use for this ? I'd like to have
a bit of 'headroom' in the current dept. And I'm sure I can
find the rect bridge and caps (computer grade ok ?) for it
from 'All Electronics', Alltronics, Hosfelt or Mouser.

This will be for powering an older 1/2 watt 47-59 MC
military vehicular tranceiver (miniature tubes). I know
there IS a matching PS for this unit, but I'd rather not
have to deal with vibrators and having to supply the inter-
mediate 12/24 VDC to power THAT unit as well.

I don't expect this to cost a BUNDLE, but neither do I intend
to use the lowest grade components available. I want this to
be as close as I can feasably get it to flat DC. And it would
be nice to have some decent line regulation, and transient spike
suppression. The AC mains here aren't the most stable :-/

Subject: Need info for building 90vdc PS

You might look for a 120 v 1amp isolation transformer .you could use a vr tube
voltage regulator ..I might suggest that you look again about needing 1 amp at
90 volts,that much power would run a 50 watt output transmitter . to save
money you can sometimes use two filament transformers back to back ,you can
get them about anywhere. good luck Harold W4PQW

Date: Tue, 11 Jul 2000 23:59:56 -0400
From: "Fredric J. Einstein" <feinstei@mw.mediaone.net>
Subject: Value of Drake L4C, R7, and TR7

>Drake R7

The R-7 is worth anywhere up to $850 if it's in pristine shape, with the noise blanker, 6 kHz filter, and 1.8 kHz filters installed. Add $50.00 if you have the box, service manual, and original instruction manual. Without the noise blanker, it's worth about $75 less. Lack of the 6 kHz filter subtracts about $60. Lack of the 1.8 kHz filter subtracts about $40.

These are highly desirable among shortwave broadcast listeners and they are considered one of the best receivers around for shortwave DX'ing.

>Drake TR7

The TR-7/PS-7 with a full complement of filters in pristine shape with the noise blanker is worth about $700 maximum. Add $50 for original packaging, instruction manual, and $25 for the service manual. Subtract about $50 if the TR-7 doesn't put out at least 60 watts on 10 meters. There's a couple of switching diodes on the front of the high pass filter assembly that go bad quite often and reduce the power output on 10, 15, and sometimes 20. Although they're easy and cheap to replace, the value of the TR-7 suffers if they're bad. A bare-bones TR-7/PS-7 with only the SSB and CW filters goes for about $500.

Thanks for the reply Joe, I've looked on the site you mention but I
hav'nt seen anything similar there, do you have any further info?. The
Hagenuk connection is pretty good as all the pcb's are marked as such,
but unfortunatly they are now into digital comms and have no interest
in HF comms whatsoever, this info was from an ex hagenuk employee.
cheers Mike W

From: ti2dll@ti2dll.penguinpowered.com (Mario Melendez Esquivel)
Subject: Bendix Radio?

Hi all,

About a year ago, we were given an antique radio which we have only a slight idea of what it is. It's pretty darn old from the looks of it... the radio has a small metal plaque which says the following:

A[]M
RA-1B
110D/30 3

(the [] is a crown symbol)

And another one which states:

AIRCRAFT RADIO RECEIVER
BENDIX RADIO CORPORATION
USA

Can anyone place this "aircraft radio receiver"? What are (or were :) it's capabilities? What was it used for? Does Bendix still exist? Anyone have diagrams for this thing? It'd be interesting to see if it still works, but we'd rather not risk the kind of electric shock that thing could generate it there was a short inside...

Subject: Bendix Radio?

My friend Al VE3AL had one of these in Canada and used it on 80 and 40 M in the early 1950s. I think that it is a communications and Direction finding coverage receiver. It was black and about 8" by 12" by about 24' long if I remember correctly. Al is still alive and in his 60s. He is a mad collector

and I would think that he still has it around in his junk shack. He may even
have a wiring diagram!
73

Lee ZL2AL - ZL7AA, ZL8RI, ZL9CI, VE3OE

Yesterday it worked.
Today it is not working.
Windows is like that.....

Subject: Drake T-4XC bad keying

Each time the VOX relay is activated after a period of listening, the first
dot is somewhat shortened and the waveform is not very nice looking. See the
attached picture. Any cure for this? Soft VOX-relay?
BTW, anyone who has modified the T-4XC for QSK?
/sm6pxj

From: Chris Suhar
Subject: Drake T-4XC bad keying

You might try replacing the shaping components for the circuit. There is a
diode, resistor and capacitor network that generates a pulse to activate the
vox. I assume you changed the relay tube already.

Subject: FOR SALE: GONSET I & VFO

Original 2 meter Gonset Communicator AM transceiver from the mid 1950's
in good condition. The tubes all checked OK & I had it on the air this
week. It transmits good quality AM and receives AM signals and also FM
repeaters by "slope" detection (tuning slightly off to one side). A
picture is available. Price is $85 for the transceiver.
I also have the matching Gonset 2 meter VFO/Audio Preamp. The price
for everything is $120 plus s & h from Schenectady, NY

From: N3BJ
Subject: FS: Heathkit DX-60, HG-10, MT-1 package

For Sale: Heathkit DX-60 and HG-10, both the original models, not the later A or B versions. Work fine, full, stable output on all bands. Good condition, no rust, intact, all original knobs, front panels of both very nice. Cabinets could use a little work, but no dents or dings. Band drum on VFO is not cracked, which is rare. W7FG manual on DX-60 included.

Will throw in Heathkit MT-1 mobile transmitter in fair shape, knobs still shiny, untested, but intact. Need to make some room here.

$135 shipped for the lot.

Alan, N3BJ

From: Jim Bo
Subject: HRO-500 Help

Hello,

I am my own worst enemy.

I started to do an alignment on the HRO-500 and was adjusting the

L-24, the BFO transformer, and I cranked the core to far into the

coil form and it got stuck.
I tried various ways of freeing the core with the end result L-24

getting trashed.

With great pain, I removed L-24 and disassembled the transformer,

only to find that the plastic tube that is the coil form, broke free of the base. This resulted in the coil form turning and tearing the three wires from the pins of the transformer base.

Aarghhhhhhhh.....

I can clearly see three wires and hopefully will be able to measure the inductance between the leads to determine what winding is what ONLY if I am reading the schematic correctly.

When looking at L-24 on the schematic, it shows the transformer tapped, with the tap going to the product detector. This tap is shown to be near the bottom of the inductor symbol. Is it safe to

assume that the schematic representation is the same as how the transformer is installed in the circuit, i.e., the winding with the lower inductance is the tap?

Does anyone know the specs on L-24? Number of Turns? Where the tap should be?
Who was the manufacturer? Was it JW Miller?
What was the manufacturers part number?

The metal can has two part numbers stamped in it. One is B-51334

which is the National part number, the other is 273F6523 which may be the manufacturers part number.

As a real real long long shot, does anyone have an L-24?

I am determined to get the HRO-500 on the air again, but will need some help from others.

Thanks for reading this post.

Jim

Subject: Manual for a T-368 Transmitter

Sorting through some of the old stuff I found a copy of the
Field Maintenance Manual for a T-368 transmitter. This is the
one with the 4-400 final. It is complete with schematics.

I hate to just toss it out. I will give it away (FREE) to any
one that needs it. I have not had the rig since back in the
70's.

From: "gbowne"
Subject: RCA AM transmitters

I have an interesting chance to purchase some nice RCA AM transmitters from
the 1940's to 1950's (and possibly earlier) in various stages of
completeness very, very cheaply before they are broken up for parts and
surplus.

First of all, does anyone know what models were made in that era and can give me the numbers and data?

I need manuals ; i.e. ; Parts, service, mainenance, owners, installation, etc.

Are original parts and tubes still available? If anyone has anything that will work with these transmitters email me with what you have and prices.

They will be made to go back on air by a local non profit AM radio station.

Thanks,
Gregory Bowne

WOW! I received 12 replies via private e-mail! I did not know that there would be that much interest in the T-368.

John, K2TQN was the first to reply so he gets the manual. (John , send me your address and it is yours. Just send me postage after you receive it) It is a copy that is about 100 pages two sided.

For the others that requested the manual - if you only need a particular section, i.e. schematic of a section etc. send me an e-mail. I will scan that section and e-mail it to you or perhaps post it on my web site so that all could download it. I am sorry but due to the large number of pages I do not have the time to copy each page and sent it to all of you.

All Gear working last time tested unless noted. Shipping is extra. Please reply to my email address.
Thanks

Tempo-1: All Tube Ham Transceiver with Power Supply. Covers 80-10 meters. Looks good and works well. $200

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord and mounting bracket. Looks and works Good. $100

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $45.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $60.

Marantz Model 2220B: Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation. I would rate a 9.7. Also have original manual, in excellent condition. $175

AR Inc: Stereo Amp, All solid state. $100. Please don't ask the model #. I have been asked this many times and unable to locate on the name plate. The serial # is: AA002291. It comes with the optinal wood case the face is Gold Alumi. With the following controls: Mode selector, Bass, Treble, balance and volume. In the upper left corner is a red LED and on the bottom right is a normal/monitor switch. I would rate it a 7 on appearance.

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $100

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $115 for both.

Bearcat 250 Scanner: Have two. One working at times and one for parts. $50 for both.

RS Pro 30 Scanner: Hand held 16 channel Digital scanner. Looks & Works good, but the battery cover plate is missing $35.

>unit.

Don,

The Abbot TR-4's were used by the War Emergency Radio Service just before and during WWII. The standard model operated on the old 2-1/2 meter amateur band at about 112Mhz. It is rare to find one that has not been modified to operate on 144Mhz, or as close as those old oscillators got. The receiver is a superregen and the transmitter is a modulated oscillator. The audio section consists (usually) of a 7F7 preamp and a 6L6 or 6V6 output tube. The operating voltages are 6.3VAC for the filaments, 250-300VDC for the plates, and a -22V bias supply, which is also used for the carbon microphone. The transmitter output is about 2-1/2 watts.

They are interesting as historical antiques, but I wouldn't attempt to put one on the air these days. The receiver alone would probably disrupt 2m operations for miles.

I restored one recently, and tested it in a screened room. When I saw what the output of the transmitter looked like, I gave up all thoughts of putting it on the air, even for nostalgia.

In the late 50's, I bought six TR-4's on the surplus market for $5.00 each. I modified them for our Civil Defense net on 6m. I scrapped the original transmitters, and added a small crystal controlled two tube circuit in the space formerly occupied by the transmitter tube. The original transmitter tuning circuit became the output tank. We used them for several years, some as mobiles with vibrator supplies.

My experience is tht they aren't as sturdy as the Svetlana 572's, but if you are going to use them for replacements for 811's then I think they should do just fine. They will never be taxed to produce to their limits.

You might try cleaning the relay. This happened in an older T4X ...either
cut off a character or produced a bad character.
Used relay contact cleaner and burnishing tool. After cleaning it worked
great again.

Thanks for the reply Joe, I've looked on the site you mention but I
hav'nt seen anything similar there, do you have any further info?. The
Hagenuk connection is pretty good as all the pcb's are marked as such,
but unfortunatly they are now into digital comms and have no interest
in HF comms whatsoever, this info was from an ex hagenuk employee.
cheers Mike W

2006. Hey, Hallicrafters old timers!

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-17 00:00:00 UTC
From: Badkitty <castleridge1@icqmail.com>
Message-ID: <s3n4nss6dai4e9m1okfo6a73p30l1t44us@4ax.com>
Source record: 63887

Just picked up (bending at the knees) what I believe is a 1937 SX-17
Hallicrafters. (Someone thoughfully removed the info plate inside)

Seen here:
http://www.radiohound.net/images/P0000754sc.jpg
http://www.radiohound.net/images/P0000755sc.jpg

I found a schematic on BAMA for the SX16, which other than one
unmarked switch on the faceplate looks identical. Can anyone tell me
the difference between these two models please?

John

Message-ID: <397252A7.5400@sonic.net>
Source record: 63889

Hi Gang,
I'd like to swap the items mentioned in the
heading for a good condition (working and cosmetic) rig.
I'd prefer a Kenwood TS-820 or TS-520. I'm looking for a reliable
(non-project!) back up rig.

The Heath stuff is in good, original condition.

It was nice to see the answer, especially since the guy who offered a
manual could have taken the time to include some details before hawking
the manual, for those of us who were dying for an answer.

I had a vague idea that it was the sort of design that you describe, but wasn't certain enough to answer. That sort of thing, not much more than an oscillator for transmit, and a superregen receiver, may not have done much for weak signal operation, but sure did help to popularize the bands. That sort of thing helped to get things going on six, I guess they were popular when it was the 5 meter band, and then when the band got popular and new regulations came into effect, the same sort of circuitry helped to get 2 1/2 meters going. And then the design moved up to the 420 MHz band (and of course, 1215 got a boost from the APX-6 surplus rigs). Even when modulated oscillators became a non-no, one could say the idea of simple rigs lived on in the Heathkit Lunchbox series, ie the Sixer and Twoer.

2025. Re: Drake T-4XC bad keying

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-18 00:00:00 UTC
From: CA <sm6pxj@hotmail.com>
Message-ID: <75Tc5.17076$rH5.37581@nntpserver.swip.net>
Source record: 63843

Thanks for the response.
However, I now have substituted both the relay and the VOX control tube V10
and there is no difference at all.
The relay rise time is 9 ms and this is probably where it all comes from.
Maybe all the T-4XC have this behaviour. At least I know 2 other with the
same distorsion when the relay activates.
I will try to use a fast vacuum relay (1ms) instead of the old one.
/sm6pxj

2026. Guide to the rec.radio Newsgroups

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-18 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <8l1269$h59$1@news.hawaii.edu>
Source record: 63894
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.antenna

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any amateur radio-related message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the

group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists
==========

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs <your@address.here>

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send an email to majordomo@qth.net and only write: lists to get the complete index.

For one of the most complete indexes of email lists, see the excellent web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's

headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

2027. Re: Bendix Radio?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-18 00:00:00 UTC
From: robinson@srsuna.shlrc.mq.edu.au
Message-ID: <8l13an$4ae$1@sunb.ocs.mq.edu.au>
Source record: 63895

Hi,

It is called an RA-1B made in the USA by Bendix.
The A crown M means the British Air Ministry.

It came into use in commercial service immediately
prior to WW2 with US airlines. It was taken on by the
military and produced in large quantities.
Fitted to many different types of aircraft
including Catalinas (PBY's).

Covers .15-1.5 mcs, 1.8-15 mcs in 6 bands.
Eight valves, 2 uv sensitivity, IF 1630 kcs.
Filament requirements are 12 vdc 1.5 A or 24 vdc @ .8A.
External MP5A24 dynamotor provides 225 vdc @ 70 ma.

It had some good features regarding ham use,
used 6.3 v valves so the normal 12/24v arrangement
could be easily changed, could be controlled from the front panel
so that you didn't need a MR-1B remote control, had no inbuilt supply
so an external one could be easily built.
Consequently, most are in good condition with few unreversable mods.

Regards
Ray

Subject: Atlas 210X plug

I had a plug for mine,but it kept falling out. I made the required
jumpers out of solid copper wire which would stay in the connector,
and have not had another problem with it. The plugs are also easily
lost.

I found the problem. Apparently one of the previous owners was doing
something on the PA board and didn't get a few things right. The
finals were replaced at some point with new Motorola units. It looks
like the bias transistor was also replaced. One of the bias resistors

was the wrong value, and a bypass cap was missing in the bias circuit. I got it straightend out and adjusted it to idle as you and the manual suggest at 1/2 amp. Works great now. Runs much cooler. Thanks for the info.

Subject: For Sale: Hallicrafters S20R parts...

Hi All,
I have some chassis parts left from a Hallicrafters S20R. These are mainy controls and switches. No I.F.'s no dials. Some pulleys and flywheel assembly. Coils are there and a questionable audio output xfrmr is there also. No cabinet parts...
Please email me directly at: nc183d@aol.com
P.S. sorry to the fellow with the S19R, I lost your email......I will fill your order first if you are still in need...
rgds,
Mark S.

Subject: FS:COLLINS 75A1 parts/project radio

FS: Collins 75A1 parts radio. Things that are missing:
Cabinet
Round Kilocycle dial
some sheild covers
(1) RF coil
It is 95% there. I plugged it in and it gets static but sensitivity is way down. It did a pull in a couple very strong stations but thats it. Cosmeticlly the front is ok with a bit of a wear mark around the tuning dial and some nicks. This is a definite project radio or could be a great source of parts for others but I have no time to part it out or restore it. $200 shipped cont U.S.

Tnx,
Jim

Subject: Parting out - Hallicrafters S-107

Greetings, Hallicrafters fans!

I am parting out a Hallicrafters S-107 receiver. No knobs,
no glass dial, no speaker, no tubes. Otherwise appears to
be complete and not rusted/corroded inside. I guess I ought
to note that this is a Mark II model (uses 7- and 9-pin mini
tubes as opposed to the earlier models which used octals).
What do you need?

I don't remember the radio, but I do recall the airplanes that
he flew. He started out with a Cessna Bobcat (a WW-II surplus
trainer known as the "Bamboo Bomber due to its largely wooden
structure), then moved on to a more modern Cessna 310.

From: "Michael Taylor" <mvtaylor@voyager.net>
Subject: USS Missouri

Below is some communication which may be interesting to some of you.
I have donated a refurbished and working R-390A to this effort but as you
can see the need is extensive. Some of you certainly have pieces which would
fit in to this need. I think all of us should consider the enormous debt we
owe to this ship and the men who sailed her. We are in a particularly good
position to do something about this. This is a good opportunity to make a
positive statement for our hobby.

Thanks for the bandwidth and you can respond to me or peter of the list.

Mike Taylor

BTW if you have something and need some help with the shipping let me know I
will try to help you out.

Mike,

Great! Any other donations you can aim our way would be most appreciated. Any of the military stuff from RBAs, RBBs, TBAs down to the 1051s and URTs would be displayed (and operated?) with pride onboard this memorial.

If you or any others have questions on the authenticity of this endeavor, Ned Conklin is the current president of the BMARC (Battleship Missouri Amateur Radio Club) whose email address appears in the CC above. He may be contacted independently.

Again, a big thanks.

Pete Wokoun, KH6GRT

Subject: WANTED late 30's, early 40's Radio Craft Magazine article

Want copy of late 30's, early 40's Radio Craft
or Radio News or similar Magazine of that era
with an article describing how to build a TV
camera using an 1847 Iconoscope and a 2"
(902P1 I think) viewfinder.

I had that camera and article about 40 years ago
but my Dad sold it to a friend of his while
I was away at college.

I have acquired an 1847 Iconoscope and would
like very much to have the magazine article
again.

If you have collection of magazines from the era
I would appreciate your looking through
them for this article. Sorry I don't remember
the exact title of the magazine but seem to
recall it was Radio Craft and had picture of
camera on cover.

Would be willing to trade one of my L/C Meter
Kits for the magazine ($100 value).

Hi

I'm looking for a manual for the above radio. An original or a copy
would be fine.

Please reply by email in case I don't get back here in the next couple
of days.

Thanks

From: Jim Jerzycke <kq6ea@pacbell.net>
Subject: WTB manual for TS-850

Try www.w7fg.com. He has manuals for Kenwood radios. BE VERY CAREFUL if
you order a manual from Howard W. Sams!
These guys will sell you a poorly photocopied, expensive collection of
loose sheets. I had three sheets for my TS-430 that were impossible to
read, and they insisted I send them back for replacement. Normally that
wouldn't be a problem, but it took six weeks to get the manual in the
first place, and another six weeks to get the replacements. They were
barely any better than the first ones.
73, Jim

This thing looks like a shrunken version of a 30s electric iron
connector. It's a female thing. About 1" across & .5" high with rounded
narrow sides. Three ~1/8" pins in a triangular pattern.

It goes on a RCA 50-A mike. The mike that was the park anouncer's
at Atlanta's 36 yrs-deceased Ponce de Leon Crackers park.

I now have one operating trumpet (not folded) and one p-p 6L6 AB2 RCA amp &
preamp from same place.

Gonna use @ 8-00 AWA meeting. Having fella who was ball boy in '49 & '50
announce a Macon Rangers vs Atlanta Crackers inning.

Thanks,

Marty

From: robinson@srsuna.shlrc.mq.edu.au (Ray Robinson)
Subject: Bendix Radio?

Hi,

It is called an RA-1B made in the USA by Bendix.
The A crown M means the British Air Ministry.

It came into use in commercial service immediately
prior to WW2 with US airlines. It was taken on by the
military and produced in large quantities.
Fitted to many different types of aircraft
including Catalinas (PBY's).

Covers .15-1.5 mcs, 1.8-15 mcs in 6 bands.
Eight valves, 2 uv sensitivity, IF 1630 kcs.
Filament requirements are 12 vdc 1.5 A or 24 vdc @ .8A.
External MP5A24 dynamotor provides 225 vdc @ 70 ma.

It had some good features regarding ham use,
used 6.3 v valves so the normal 12/24v arrangement
could be easily changed, could be controlled from the front panel
so that you didn't need a MR-1B remote control, had no inbuilt supply
so an external one could be easily built.
Consequently, most are in good condition with few unreversable mods.

Regards
Ray

Subject: Drake T-4XC bad keying

You might try cleaning the relay. This happened in an older T4X ...either
cut off a character or produced a bad character.
Used relay contact cleaner and burnishing tool. After cleaning it worked
great again.

From: "CA"
Subject: Drake T-4XC bad keying

Thanks for the response.
However, I now have substituted both the relay and the VOX control tube V10
and there is no difference at all.
The relay rise time is 9 ms and this is probably where it all comes from.
Maybe all the T-4XC have this behaviour. At least I know 2 other with the
same distorsion when the relay activates.
I will try to use a fast vacuum relay (1ms) instead of the old one.

Subject: FS: Radio Gear

All Gear working last time tested unless noted. Shipping is extra. Please reply to my email address.
Thanks

Tempo-1: All Tube Ham Transceiver with Power Supply. Covers 80-10 meters. Looks good and works well. $200

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord and mounting bracket. Looks and works Good. $100

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $45.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $60.

Marantz Model 2220B: Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation. I would rate a 9.7. Also have original manual, in excellent condition. $175

AR Inc: Stereo Amp, All solid state. $100. Please don't ask the model #. I have been asked this many times and unable to locate on the name plate. The serial # is: AA002291. It comes with the optinal wood case the face is Gold Alumi. With the following controls: Mode selector, Bass, Treble, balance and volume. In the upper left corner is a red LED and on the bottom right is a normal/monitor switch. I would rate it a 7 on appearance.

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $100

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $115 for both.

Bearcat 250 Scanner: Have two. One working at times and one for parts. $50 for both.

RS Pro 30 Scanner: Hand held 16 channel Digital scanner. Looks & Works good, but the battery cover plate is missing $35.

From: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Subject: Guide to the rec.radio Newsgroups

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul
Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any amateur radio-related message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both

existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may

crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists
==========

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to: majordomo@piobaire.mines.uidaho.edu and only write: subscribe glowbugs

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted to each state, manufacturer, mode, band - too many to state here. Send

an email to majordomo@qth.net and only write: lists to get the
complete index.

For one of the most complete indexes of email lists, see the excellent
web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves;
that doesn't work very often, and is very annoying to those on the list.
Also, please keep your electronic mail address current with any mailing
lists you subscribe to, as dealing with returned email is a nuisance for the
person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine
interest in both groups in the topic being discussed, and when you do, please
include a header line of the form "Followup-To: group.name" in your article's
headers (before the first blank line). This will cause followups to your
article to go to the group listed in the Followup-To: line. If you wish
to have replies to go to you by email, rather than be posted, use the word
"poster" instead of the name of a group. Such a line appears in the headers
of this article.

One of the few examples of productive cross-posting is with the rec.radio.info
newsgroup. To provide a filtered presentation of information articles, while
still maintaining visibility in their home newsgroups, the moderator strongly
encourages cross-posting. All information articles should be submitted to the
rec.radio.info moderator so that he may simultaneously cross-post your
information to the appropriate newsgroups. Most newsreaders will only present
the article once, and network bandwidth is conserved since only one article is
propagated. If you make regular informational postings, and have made
arrangements with the moderator to post directly to the group, please
cross-post as appropriate.

Don,

The Abbot TR-4's were used by the War Emergency Radio Service just before and during WWII. The standard model operated on the old 2-1/2 meter amateur band at about 112Mhz. It is rare to find one that has not been modified to operate on 144Mhz, or as close as those old oscillators got. The receiver is a superregen and the transmitter is a modulated oscillator. The audio section consists (usually) of a 7F7 preamp and a 6L6 or 6V6 output tube. The operating voltages are 6.3VAC for the filaments, 250-300VDC for the plates, and a -22V bias supply, which is also used for the carbon microphone. The transmitter output is about 2-1/2 watts.

They are interesting as historical antiques, but I wouldn't attempt to put one on the air these days. The receiver alone would probably disrupt 2m operations for miles.

I restored one recently, and tested it in a screened room. When I saw what the output of the transmitter looked like, I gave up all thoughts of putting it on the air, even for nostalgia.

In the late 50's, I bought six TR-4's on the surplus market for $5.00 each. I modified them for our Civil Defense net on 6m. I scrapped the original transmitters, and added a small crystal controlled two tube circuit in the space formerly occupied by the transmitter tube. The original transmitter tuning circuit became the output tank. We used them for several years, some as mobiles with vibrator supplies.

It was nice to see the answer, especially since the guy who offered a
manual could have taken the time to include some details before hawking
the manual, for those of us who were dying for an answer.

I had a vague idea that it was the sort of design that you describe,
but wasn't certain enough to answer. That sort of thing, not much more
than an oscillator for transmit, and a superregen receiver, may not
have done much for weak signal operation, but sure did help to popularize
the bands. That sort of thing helped to get things going on six, I
guess they were popular when it was the 5 meter band, and then when
the band got popular and new regulations came into effect, the same
sort of circuitry helped to get 2 1/2 meters going. And then the design
moved up to the 420 MHz band (and of course, 1215 got a boost from the
APX-6 surplus rigs). Even when modulated oscillators became a non-no,
one could say the idea of simple rigs lived on in the Heathkit Lunchbox
series, ie the Sixer and Twoer.

Subject: Manual for a T-368 Transmitter

WOW! I received 12 replies via private e-mail! I did not know that there would be that much interest in the T-368.

John, K2TQN was the first to reply so he gets the manual. (John , send me your address and it is yours. Just send me postage after you receive it) It is a copy that is about 100 pages two sided.

For the others that requested the manual - if you only need a particular section, i.e. schematic of a section etc. send me an e-mail. I will scan that section and e-mail it to you or perhaps post it on my web site so that all could download it. I am sorry but due to the large number of pages I do not have the time to copy each page and sent it to all of you.

Subject: Taylor 572B's any good? Best 572B?

My experience is tht they aren't as sturdy as the Svetlana 572's, but if you
are going to use them for replacements for 811's then I think they should do
just fine. They will never be taxed to produce to their limits.

As Boatanchor lovers you might enjoy looking at the pictures of the Regency Ham Band Receiver Converter ATC1 Item 381003004 available for auction. I know I had never seen one in 35 years as a ham.

Lots of Canon style connectors are available from
Surplus Sales of Nebraska (www.surplussales.com)

No, I don't have anything to do with them, but I've
seen these in their catalog. Probably worth a look.

Hi,

>This thing looks like a shrunken version of a 30s electric iron
>connector. It's a female thing. About 1" across & .5" high with rounded
>narrow sides. Three ~1/8" pins in a triangular pattern.

Do you have a model number? Or a number for the mating connector?
I'd have to look it up in a catalog, to see if I have one.

These connectors are still manufactured. Go to:

http://www.alliedelec.com/default.asp

Under "search criteria" enter "xlr" (the type of connector) and under
"search scope" select "part description. Should bring up at least 20
flavors.

Hi all;
I am looking to purchase either the Kenwood R599A/D series or the
Drake R4B/C series. My primary interest is slow-moderate CW (~15WPM)
and 60WPM RTTY with SSB voice running a very distant second.

Any recommendations as to which would be better/best suited to the task will
be greatly appreciated. Pros/cons of R599A vs D and R4B vs C for my
intended uses will be very helpful as well.

Please e-mail me at both addresses below:

Thanks!

Thanks to all who responded to my inquiry. The general concensus is the
Kenwood would be a better choice as far as transmit, due to the 6146 finals.

Now the big question: Does anyone have a set of Kenwood twins in good working
and cosmetic condition that they would like to part with?

I would prefer the 599D, but would consider any model. For the time being I
can also get by with just the receiver.

Please e-mail me at both addresses below.

Thanks for all your help!

For Sale: Clegg 22er AM Transceiver.
Very good cosmetic shape. Will look nice next to your boatanchor rigs. Works great, Very sensitive; Hears everything my modern FM rig hears (of course not quite as clear because I am listening on AM). Comes with 3 crystals 146.105, 144.450, 145.350. Does not come with a mic- keeping the D-104 for my Collins stuff but it sure does sound good with and old unamplified D-104. Also has Instruction manual with schematic. $99 shipped anywhere in the Continental U.S.

Tnx,
Jim

I have in good condition a 212Z-1 Remote Amplifier. This is a solid state, 4 Channel AC or Battery operated portable in a case used for on the spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent for AM Transmitters requiring line level audio input. Built in 400Hz tone for setups and program monitor for headphones. All XLR inputs and also telephone connections. With a really large VU Meter in the center makes it a real great addition to any station. $395 each plus shipping.

We have an RCA BC250 AM broadcast Transmitter. If these are what you have available, I have the Manual. It uses solid state or Murcury Vapour diodes, and since it is plate modulated, it sports a pair of 813's for the modulators and a paiir for the RF amps. It is a wonderful machine. All the tubes are available and not at all expensive. I have boxes of 813's and a few graphite ones I picked up at a swap meet for 20 bucks a pair. I believe it's a late 50's vintage.
Good luck!

2062. Mic for boatanchor?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-19 00:00:00 UTC
From: Rodney Isom <rodneyi@noooospam.hiwaay.net>
Message-ID: <sncom95l6tt33@corp.supernews.com>
Source record: 63758

Hi folks,

I've got a Hallicrafters SR-500 HF rig (about 30 yrs old, I think), but I don't have a mike for it. The mike connection has two conductors inside the connector plus a shield that appears to be grounded to the rig chassis. What kind of mike would work with this rig? Any specific recommendations would be appreciated.

Also, what is this radio (with AC power supply) worth? It seems to work good & is in very good condition cosmetically.

Thanks,
Rodney - KF4COV

I have a 3 position coax switch (remote control) requiring 115vac
to operate. I have no idea how to operate it.

The label on the unit is:
R.F. COAX SWITCH
Model No. 3N120RC1 Type 1P3T
MFG No. 2903-50 Ser. No. 236--
115 VOLTS A.C. 60~ 1Ph.
GENERAL COMMUNICATIONS COMPANY
BOSTON MASS

It is about 4.5" long, with a cylindrical body about 2.25" dia.
From the side of the cylindrical body protrudes a 4 pin "Bendix"
connector (for switch control) and at the end of the cylinder are
4 'N' connectors, labeled 'IN', '1', '2', '3'.

It appears to be motor driven (the driving mechanism is in the
cylindrical body).

I have photos and a resistance table of the connector pins available
if needed. please email if i can answer any questions.

Can anyone help? email K3NCB@arrl.net

The 250-20 is a 52 ohm in line filter. Sold for $14.95 in 1962. That's all my
old handbook says about it.

Subject: RTTY/CW: Which twins are best suited, Kenwood or Drake ?

Hi all;
I am looking to purchase either the Kenwood R599A/D series or the
Drake R4B/C series. My primary interest is slow-moderate CW (~15WPM)
and 60WPM RTTY with SSB voice running a very distant second.

Any recommendations as to which would be better/best suited to the task will be greatly appreciated. Pros/cons of R599A vs D and R4B vs C for my intended uses will be very helpful as well.

Please e-mail me at both addresses below:

It appears to be motor driven (the driving mechanism is in the
cylindrical body).

I have photos and a resistance table of the connector pins available
if needed. please email if i can answer any questions.

Can anyone help? email K3NCB@arrl.net

I don't remember a lot about the RME6900, but I had one when they first came
out around 1961. They were a relatively nice receiver, with one of the
smoothest flywheel dial mechanisms around.

As I recall, it only covered the 80 through 10 meter ham bands.

As for manufacture it was made by RME.
Which I "believe" stands for Radio Manufacturing and Engineering...As I said
it's been a *Long* time since I had one.

The RME 69? predated the 6900 and that is about all I "think" I remember
<:-))

Well, I can give my opinion. Others may disagree. But I think these are all inexpensive VTVMs without any particular collector value or usability features to attract a crowd. So I would say $10-$15 each, preferably with probes and manuals, and assuming good condition.
Good luck.

2091. Need help with Heathkit VF-1 vfo

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-19 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <n7md5.30$IH5.4218@bos-service2.ext.raytheon.com>
Source record: 63943
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

Hi gang,

I have a favor to ask, and it's going to take a bit of trust on someone's part...

I am fixing up a Heathkit VF-1 vfo to go with a DX-40 that I am about finished bringing back from the dead (literally!). The VF-1 is in very good condition internally, but the round plastic frequency dial has a bunch of the markings worn off from being misaligned and rubbing against the inside of the front panel over the years (before I got it). I have been unable to locate a replacement. I have an idea; however, it requires that someone loan me an intact VF-1 frequancy dial!

I plan to photocopy the dial onto a piece of transparency material (the kind used in overhead vu-graf projectors). I would then make a round disk out of translucent off-white plastic, affix the transparency to it, and *voila*, I would have a new dial that should work fine! I'm not concerned about it looking "factory", just being correct and usable (the DX-40 it's gonna be used with isn't original either).

Now... if I could just find someone who would trust me and loan me their VF-1 dial. I don't know how to instill good confidence, except to say that I'm an Extra class ham (for a long time), I've been an active ham for 23 years, I have an outstanding feedback profile on eBay, a lot of folks on the newsgroups have sold to me, bought from me, and traded with me, and I promise to treat your loaner dial with the utmost care, pay shipping and insurance both ways, and get it back to you very quickly. Plus, I'm a serious CW op and always have been! You gotta respect that...

I'll even make extra copies and make 'em available for FREE to anyone who wants one (there's gotta be someone else out there in this same predicament).

Please, will you help me?

Dean, K5DH

2100. Need Help With HQ-170C

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-20 00:00:00 UTC
From: Bill Evans <bevans@ebsys.mb.ca>
Message-ID: <dEvd5.102116$dj.11780@news2.mts.net>
Source record: 63764

I am having intermittent receiver mute recovery problems
with my Hammarlund HQ-170C, used in conjunction with a
Johnson Ranger transmitter. On a significant number of
occasions when I release the D-104 microphone bar to
receive, the HQ-170C stays muted and will remain muted until
I give the PTT one, two, three - or as many as six "pumps".
I employ an external TR relay, controlled by the Ranger PTT.

At first I thought the auxiliary contacts on the TR relay
were sticking, as a normally closed contact pair is used in
conjunction with the 170C relay socket to operate the
muting. However, everything works fine with the auxiliary
contacts themselves, which switch -108 VDC to the RF stage
and the two IF amplifiers when the receiver is muted.
he -108 VDC disappears instantly when I release the
microphone bar but the receiver may remain muted. If I
don't clear the condition by pumping the PTT until the
muting drops, the receiver looks like it will stay muted
forever. (Power "off" and working all the other switches
does nothing to clear the condition.)

Can anybody suggest what the problem is in this situation?

Source record: 63770

Hello Dean,

Sorry, I don't have one, but here are some ideas:

1) The VFO dial in the DX-100 us identical to the VF-1.

2) If someone doesn't want to send the actual dial, they could send a photocopy of it that you could copy

3) It's a lot of work, but if you have a CAD program, you could draw a new dial from scratch and print it out. You could make a paper-and-pencil dial and mark it with the actual measured frequencies, then draw the CAD version. (I do this with my homebrew rgs, using an LM freqmeter. Looks great).

The VF-1 and some other BA gear (EFJ 122) has a range for 11, which is useless today. This range is usually just the 40 meter range with a padder. By adding a fixed silver mica capacitor in parallel with that padder, the range can be brought down to the 6 MHz area for 17 or 12 meters, or to the 5 MHz area for 30 meters. If you do version 3, you can have a calibrated scale for that range on the new bands.

Will keep an eye out for a VF-1 or DX-100...

Subject: Atlas 210X plug

John
I could look at your 210X if you like. I mostly repair Drake and
Collins as a sideline but I am not too busy right now. What's wrong with
it?

Gary

From: Gary W8PU
Subject: Atlas 210X Problem or Normal?

That is not normal. I owned a 215X. Sounds like the bias for the final
transistors is too high or there some other problem with the PA section.

Gary

Subject: FS:CLEGG 22er AM RIG

For Sale: Clegg 22er AM Transceiver
Very good cosmetic shape. Will look nice next to your boatanchor rigs. Works great, Very sensitive; Hears everything my modern FM rig hears (of course not quite as clear because I am listening on AM). Comes with 3 crystals 146.105, 144.450, 145.350. Does not come with a mic- keeping the D-104 for my Collins stuff but it sure does sound good with and old unamplified D-104. Also has Instruction manual with schematic. $99 shipped anywhere in the Continental U.S.

Tnx,
Jim

From: jimmoci@aol.com (Jim Moci)
Subject: FS:Johnson 500 RF Deck

For Sale: Johnson 500 RF deck & original Johnson Manual.
Case was glass beaded, powder coated and is ready for Johnson Maroon paint. Front is in OK shape. Has scratches around edges and some scrathces on front. Nothing Obscene though. All knobs are there but a couple are missing white pointers. The deck appears totally stock except the clipper circuit looks like it was bypassed for better fidelity audio. This mod was common on many 500's and Valiants. I have had it for awhile and hooked it up to a friends 500 PS/Modulator when I bought it and it worked fine. All tubes are good including 4-400 final. I was going to build a killer PS/Modulator for it but too many projects- not enough time. New motorcycle forces sale. Serious inquiries only- no trades, no hagglers, no tire kickers. I am not giving it away considering a 500 with PS/Mod sold on Ebay for $2000 awhile back. First $800+ shipping takes

it. You can check it out in person near Philly if you like.
Thanks,
Jim

Subject: Ham radio lesson/Saturday AM nets

EMailed to me, source unknown

Folks,
Read this touching missive, which is followed by my testimonial - might be
worth a smile, but then again...

Subject: FW: A Thousand Marbles - Please read this

<< This is perhaps one of the most noteworthy hunks of e-mail I have received
to date. It's worth a serious read and a
count of your personal inventory of marbles... :-)

A Thousand Marbles
The older I get, the more I enjoy Saturday mornings. Perhaps it's the quiet
solitude that comes with being the first to rise,
or maybe it's the unbounded joy of not having to be at work. Either way, the
first few hours of a Saturday morning are
most enjoyable. A few weeks ago, I was shuffling toward the basement shack
with a steaming cup of coffee in one hand
and the morning paper in the other.
What began as a typical Saturday morning turned into one of those
lessons that life seems to hand you from
time to time. Let me tell you about it. I turned the dial up into the phone
portion of the band on my ham radio in order
to listen to a Saturday morning swap net.
Along the way, I came across an older sounding chap, with a
tremendous signal and a golden voice. You know

the kind, he sounded like he should be in the broadcasting business. He was telling whoever he was talking with something
about "a thousand marbles".
I was intrigued and stopped to listen to what he had to say. "Well, Tom, it sure sounds like you're busy with your job.
I'm sure they pay you well but it's a shame you have to be away from home and your family so much. Hard to believe a
young fellow should have to work sixty or seventy hours a week to make ends meet. Too bad you missed your daughter's
dance recital." He continued, "Let me tell you something Tom, something that has helped me keep a good perspective
on my own priorities." And that's when he began to explain his theory of a "thousand marbles." "You see, I sat down
one day and did a little arithmetic. The average person lives about seventy-five years.
I know, some live more and some live less, but on average, folks live about seventy-five years." "Now then, I multiplied
75 times 52 and I came up with 3900 which is the number of Saturdays that the average person has in their entire lifetime.
Now stick with me Tom, I'm getting to the important part." "It took me until I was fifty-five years old to think about all
this in any detail", he went on, "and by that time I had lived through over twenty-eight hundred Saturdays.
I got to thinking that if I lived to be seventy-five, I only had about a thousand of them left to enjoy."
So I went to a toy store and bought every single marble they had. I ended up having to visit three toy stores to round-up
1000 marbles. I took them home and put them inside of a large, clear plastic container right here in the shack next to
my gear. Every Saturday since then, I have taken one marble out and thrown it away." "I found that by watching the marbles
diminish, I focused more on the really important things in life. There is nothing like watching your time here on this earth
run out to help get your priorities straight."
"Now let me tell you one last thing before I sign-off with you and take my lovely wife out for breakfast.
This morning, I took the very last marble out of the container. I figure if I make it until next Saturday then I
have been given a little extra time. And the one thing we can all use is a little more time." It was nice to meet you Tom,
I hope you spend more time with your family, and I hope to meet you again here on the band. 75 year Old Man,
this is K9NZQ, clear and going QRT, good morning!"
You could have heard a pin drop on the band when this fellow signed off.
I guess he gave us all a lot to think about. I had planned to work on the antenna that morning, and then I was going to
meet up with a few hams to work on the next club newsletter. Instead, I went upstairs and woke my wife up with a kiss.
"C'mon honey, I'm taking you and the kids to breakfast."

"What brought this on?" she asked with a smile. "Oh, nothing special,
it's just been a long time since we spent
a Saturday together with the kids. Hey, can we stop at a toy store while
we're out? I need to buy some marbles!
HAVE A GREAT WEEKEND AND MAY ALL YOUR SATURDAYS BE SPECIAL!!!!!!! >>

MY TESTIMONIAL:
Wow,

Words to live by - a philosophy to embrace. Especially as I am in my
mid-life crisis.
So that is what I did. I figured just how many marbles I needed ....
where is that calculator when you need it?
I went to buy the marbles, went to the toy stores at the mall,
several times. Got detained by mall security on suspicion of being a child
molester, and had to spend one marble (Saturday) to explain it to the
police. One marble down.
Still needed more marbles, so the next Saturday the search went on.
Only a few marbles available. Another marble down.
During the week, I had a great idea. I will use those clear marbles
that floral arrangers use! Why limit myself to toy stores, I will go to the
craft shops! Managed to get a load of those floral marbles, in a nice
cardboard box. Except it was pouring rain, the marbles heavy, the box
flimsy, and me parked uphill about a block away. Yup, the box busted, the
marbles rolled off downhill. Another marble down. And me a lot of marbles
short.
While at work, I had another idea. I needed more marbles. Where
would I get them? I know - E-Bay! Except I got caught by my boss while I
was surfing on company time (that S.O.B) Had to work Saturday to make up the
time - another marble. But while I working - went and surfed and found a
marble supplier on the net. Ordered what I needed. 2 more marbles spent
waiting for that 'guaranteed Saturday delivery' C.O.D.
Another marble spent counting up the right amount of marbles.
Now I had nothing clear to put them in. (So that I could watch them
diminish) Another marble spent looking for something to put them in.
Finally got them into a large enough jug. Put the jug on my glass
top night stand, which shattered under the weight. The jug busted, the
marbles scattered, and the dog then ate some of the marbles, you guessed it -
a marble wasted at the veterinarians, a marble wasted re-counting all the
marbles as they had spilled and another marble spent at the furniture store
buying a replacement night stand.
One more marble went when my live-in exotic dancer girlfriends
delinquent son put his grandmothers glass eye into the jug. I thought it was
a heart attack, and had to go to the hospital. Ever look an eye in the eye
when you held it in your hand at 6:00 am on a Saturday morning when you have
a hang-over?
All was going along well, when I noticed that the marbles were going
fast, much faster than seemed possible. Turns out my now ex-girlfriend (who
is a real looker but light on the brains) found herself a new man, and
decided to get rid of me by moving the marbles off faster, hoping I would die
earlier. Another marble shot as I threw her stuff onto the lawn and changed

the locks on the doors.
As I can testify, those marbles changed my life and proved to me the
value of those wasted days spent on marbles..
Contact me if you want to purchase marbles, a lot of marbles.

From: k3for@aol.com (K3for)
Subject: Help - Naval Academy ham radio club in danger

Help!

I am looking for other Naval Academy graduates or US Naval personnel who can assist me in saving the amateur radio club at USNA.

I have been the officer rep for the past 2.5 years, but a decision was just made in the past 48 hours (over the summer while the mids are conveniently out at summer training or on leave) without notice or discussion, to disestablish the station W3ADO (also Navy MARS station NNN0NNN). Perceived lack of participation, lack of knowledge of our various missions and accomplishments ("oh, ham radio is dead..."), and funding probably played a role.

Mailing address for support letters:
Captain Sam Locklear, USN
Commandant of Midshipmen
101 Buchanan Road
US Naval Academy
Annapolis, MD 21402

cc me at:
Ryan "Skip" Johnson
510 Norton Lane
Arnold, MD 21012
k3for@aol.com
if you can

Or if you can't write a letter, please email me something and I will forward it to the Deputy Commandant by email.

Thank you ! I only hope its not too late -- I have to run down there and see if they've thrown out the gear already...

Subject: Help - Naval Academy ham radio club in danger

Dear Skip,

Just saw your note this evening and was very disturbed. I am the Trustee for the Boeing Employees' Amateur Radio Society - St. Louis, Home of the F/A-18 E/F Super Hornet !

We have a large club here at Boeing and have recently received outstanding support from the company in developing a highly capable HF-VHF Emergency Response Communications system including towers, antennas, etc. The Boeing Company is extremely supportive of Emergency Preparedness Activities and has approximately 11 amateur radio clubs throughout the corporation and additional "mini-response" stations located throughout the numerous Seattle facilities.

I will draft a letter of support for you this week . Please call me at work if you can, 314-232-5273 or e-mail at s.d.propper@boeing.com.

73 and hope we can help (BTW, I worked your club from our club station, W0MA, just before your mids went on summer leave.

From:
Subject: Help with Ten Tec PS

Sorry for the bandwidth here but I have tried for two days to get on the ten tec reflector at qth.com.

I have been using a Ten Tec 262G power supply to power a 2 meter rig and small amp but lightening
got into it last spring and I finally got a replacement. The problem is the schematic and the original 262G came with a 6 pin jones plug (into the PS). This model comes with a 4 pin molex. The molex plug is not a standard molex. I can probably get the molex from Ten Tec but does anyone know the pin out for the plug. I know the 252G has a 4 pin plug but is it the same pin out? I need the pin out from right to left facing the rear of the PS.

Thanks for any help.

I have some slugs that might fit the bill.. One is 1/4" dia and 3/8"
long with fine pitch threads and hex core.
The other is same diameter and a little over 1/2" long with courser
pitch threads and hex core. I'm guessing that the course pitch threads
are about 24 tpi and the fine pitch 40 tpi. Does this sound about
right, and are one or two enough?

marbles or are they going on ebay right away?

Radiomatt wrote:

EMailed to me, source unknown

Folks,

Read this touching missive, which is followed by my testimonial - might
be

worth a smile, but then again...

Subject: FW: A Thousand Marbles
- Please read this

<< This is perhaps one of the most noteworthy hunks of e-mail
I have received

to date. It's worth a serious read and a

count of your personal inventory of marbles... :-)

A Thousand Marbles

The older I get, the more I enjoy Saturday mornings. Perhaps it's the
quiet

solitude that comes with being the first to rise,

or maybe it's the unbounded joy of not having to be at work. Either
way, the

first few hours of a Saturday morning are

most enjoyable. A few weeks ago, I was shuffling toward the basement
shack

with a steaming cup of coffee in one hand

and the morning paper in the other.

What began as a typical
Saturday morning turned into one of those

lessons that life seems to hand you from

time to time. Let me tell you about it. I turned the dial up
into the phone

portion of the band on my ham radio in order

to listen to a Saturday morning swap net.

Along the way, I came across
an older sounding chap, with a

tremendous signal and a golden voice. You know

the kind, he sounded like he should be in the broadcasting business. He was

telling whoever he was talking with something

about "a thousand marbles".

I was intrigued and stopped
to listen to what he had to say. "Well,

Tom, it sure sounds like you're busy with your job.

I'm sure they pay you well but it's a shame you have to be away from home and

your family so much. Hard to believe a

young fellow should have to work sixty or seventy hours a week to make ends

meet. Too bad you missed your daughter's

dance recital." He continued, "Let me tell you something Tom, something that

has helped me keep a good perspective

on my own priorities." And that's when he began to explain his theory of a

"thousand marbles." "You see, I sat down

one day and did a little arithmetic. The average person lives about

seventy-five years.

I know, some live more and
some live less, but on average, folks live

about seventy-five years." "Now then, I multiplied

75 times 52 and I came up with 3900 which is the number of Saturdays that the

average person has in their entire lifetime.

Now stick with me Tom, I'm getting to the important part." "It took me until

I was fifty-five years old to think about all

this in any detail", he went on, "and by that time I had lived through over

twenty-eight hundred Saturdays.

I got to thinking that if
I lived to be seventy-five, I only had

about a thousand of them left to enjoy."

So I went to a toy store and bought every single marble they had.
I ended up

having to visit three toy stores to round-up

1000 marbles. I took them home and put them inside of a large,
clear plastic

container right here in the shack next to

my gear. Every Saturday since then, I have taken one marble out and
thrown it

away." "I found that by watching the marbles

diminish, I focused more on the really important things in life.
There is

nothing like watching your time here on this earth

run out to help get your priorities straight."

"Now let me tell you one
last thing before I sign-off with you and

take my lovely wife out for breakfast.

This morning, I took the
very last marble out of the container. I

figure if I make it until next Saturday then I

have been given a little extra time. And the one thing we can
all use is a

little more time." It was nice to meet you Tom,

I hope you spend more time with your family, and I hope to meet you
again

here on the band. 75 year Old Man,

this is K9NZQ, clear and going QRT, good morning!"

You could have heard a pin
drop on the band when this fellow signed

off.

I guess he gave us all a lot to think about. I had planned to
work on the

antenna that morning, and then I was going to

meet up with a few hams to work on the next club newsletter. Instead,
I went

upstairs and woke my wife up with a kiss.

"C'mon honey, I'm taking you and the kids to breakfast."

"What brought this on?"
she asked with a smile. "Oh, nothing special,

it's just been a long time since we spent

a Saturday together with the kids. Hey, can we stop at a toy
store while

we're out? I need to buy some marbles!

HAVE A GREAT WEEKEND AND MAY ALL YOUR SATURDAYS BE SPECIAL!!!!!!! >>

I seem to recall some radios on the desk, and also some rack-mount gear to the right of the desk. Looked like a rig you could talk to Mars on, but he only ever talked to the sheriff in the next town.

From: Chris <ck5@ix.netcom.com>
Subject: Collins 212Z-1 Remote Amplifier for sale

I have in good condition a 212Z-1 Remote Amplifier. This is a solid
state, 4 Channel AC or Battery operated portable in a case used for on
the spot broadcasts. Freq response 50-15KHz gain 90dB. These are
excellent for AM Transmitters requiring line level audio input. Built
in 400Hz tone for setups and program monitor for headphones. All XLR
inputs and also telephone connections. With a really large VU Meter in
the center makes it a real great addition to any station. $395 each
plus shipping.

From: "Rodney Isom" <rodneyi@noooospam.hiwaay.net>
Subject: Mic for boatanchor?

Hi folks,

I've got a Hallicrafters SR-500 HF rig (about 30 yrs old, I think), but I
don't have a mike for it. The mike connection has two conductors inside the
connector plus a shield that appears to be grounded to the rig chassis.
What kind of mike would work with this rig? Any specific recommendations
would be appreciated.

Also, what is this radio (with AC power supply) worth? It seems to work
good & is in very good condition cosmetically.

Thanks,
Rodney - KF4COV

From: k5dh@raytheon.com (Dean Hemphill, K5DH)
Subject: Need help with Heathkit VF-1 vfo

Hi gang,

I have a favor to ask, and it's going to take a bit of trust
on someone's part...

I am fixing up a Heathkit VF-1 vfo to go with a DX-40 that I
am about finished bringing back from the dead (literally!).
The VF-1 is in very good condition internally, but the round
plastic frequency dial has a bunch of the markings worn off
from being misaligned and rubbing against the inside of the
front panel over the years (before I got it). I have been
unable to locate a replacement. I have an idea; however, it
requires that someone loan me an intact VF-1 frequancy dial!

I plan to photocopy the dial onto a piece of transparency
material (the kind used in overhead vu-graf projectors). I
would then make a round disk out of translucent off-white

plastic, affix the transparency to it, and *voila*, I would have a new dial that should work fine! I'm not concerned about it looking "factory", just being correct and usable (the DX-40 it's gonna be used with isn't original either).

Now... if I could just find someone who would trust me and loan me their VF-1 dial. I don't know how to instill good confidence, except to say that I'm an Extra class ham (for a long time), I've been an active ham for 23 years, I have an outstanding feedback profile on eBay, a lot of folks on the newsgroups have sold to me, bought from me, and traded with me, and I promise to treat your loaner dial with the utmost care, pay shipping and insurance both ways, and get it back to you very quickly. Plus, I'm a serious CW op and always have been! You gotta respect that...

I'll even make extra copies and make 'em available for FREE to anyone who wants one (there's gotta be someone else out there in this same predicament).

Please, will you help me?

73,
Dean, K5DH

From: n2ey@aol.com (N2EY)
Subject: Need help with Heathkit VF-1 vfo

Hello Dean,

Sorry, I don't have one, but here are some ideas:

1) The VFO dial in the DX-100 us identical to the VF-1.

2) If someone doesn't want to send the actual dial, they could send a photocopy of it that you could copy

3) It's a lot of work, but if you have a CAD program, you could draw a new dial from scratch and print it out. You could make a paper-and-pencil dial and mark it with the actual measured frequencies, then draw the CAD version. (I do this with my homebrew rgs, using an LM freqmeter. Looks great).

The VF-1 and some other BA gear (EFJ 122) has a range for 11, which is useless today. This range is usually just the 40 meter range with a padder. By adding a fixed silver mica capacitor in parallel with that padder, the range can be brought down to the 6 MHz area for 17 or 12 meters, or to the 5 MHz area for 30 meters. If you do version 3, you can have a calibrated scale for that range on the new bands.

Will keep an eye out for a VF-1 or DX-100...

From: "Bill Evans" <bevans@ebsys.mb.ca>
Subject: Need Help With HQ-170C

I am having intermittent receiver mute recovery problems
with my Hammarlund HQ-170C, used in conjunction with a
Johnson Ranger transmitter. On a significant number of
occasions when I release the D-104 microphone bar to
receive, the HQ-170C stays muted and will remain muted until
I give the PTT one, two, three - or as many as six "pumps".
I employ an external TR relay, controlled by the Ranger PTT.

At first I thought the auxiliary contacts on the TR relay
were sticking, as a normally closed contact pair is used in
conjunction with the 170C relay socket to operate the
muting. However, everything works fine with the auxiliary
contacts themselves, which switch -108 VDC to the RF stage
and the two IF amplifiers when the receiver is muted.
he -108 VDC disappears instantly when I release the
microphone bar but the receiver may remain muted. If I
don't clear the condition by pumping the PTT until the
muting drops, the receiver looks like it will stay muted
forever. (Power "off" and working all the other switches
does nothing to clear the condition.)

Can anybody suggest what the problem is in this situation?

Subject: RCA AM transmitters

We have an RCA BC250 AM broadcast Transmitter. If these are what you have
available, I have the Manual. It uses solid state or Murcury Vapour diodes,
and since it is plate modulated, it sports a pair of 813's for the
modulators and a paiir for the RF amps. It is a wonderful machine. All the
tubes are available and not at all expensive. I have boxes of 813's and a
few graphite ones I picked up at a swap meet for 20 bucks a pair. I believe
it's a late 50's vintage.
Good luck!

I don't remember a lot about the RME6900, but I had one when they first came
out around 1961. They were a relatively nice receiver, with one of the
smoothest flywheel dial mechanisms around.

As I recall, it only covered the 80 through 10 meter ham bands.

As for manufacture it was made by RME.
Which I "believe" stands for Radio Manufacturing and Engineering...As I said
it's been a *Long* time since I had one.

The RME 69? predated the 6900 and that is about all I "think" I remember
<:-))

Thanks to all who responded to my inquiry. The general concensus is the
Kenwood would be a better choice as far as transmit, due to the 6146 finals.

Now the big question: Does anyone have a set of Kenwood twins in good working
and cosmetic condition that they would like to part with?

I would prefer the 599D, but would consider any model. For the time being I
can also get by with just the receiver.

Please e-mail me at both addresses below.

Thanks for all your help!

Subject: Tripplett, Eico, Heathkit VTM values

Well, I can give my opinion. Others may disagree. But I think these are all inexpensive VTVMs without any particular collector value or usability features to attract a crowd. So I would say $10-$15 each, preferably with probes and manuals, and assuming good condition.
Good luck.

From: "Robert A. Murrell" <murrellr-dummy@ameritech.net>
Subject: Wanted: R-388/URR Parts

I was given a Collins R-388/URR. Its pretty filthy because its missing its cover. Any idea where I can get a replacement? I'm also interested in a desktop rack to hold it. It doesn't have to be the authentic item. Its 10.5 inches tall and 13 inches deep. If you contact me, please remove the '-dummy' from my e-mail address.

Subject: ~~ATTN: 2 meter AM'ers!~~

For Sale: Clegg 22er AM Transceiver.
Very good cosmetic shape. Will look nice next to your boatanchor rigs. Works great, Very sensitive; Hears everything my modern FM rig hears (of course not quite as clear because I am listening on AM). Comes with 3 crystals 146.105, 144.450, 145.350. Does not come with a mic- keeping the D-104 for my Collins stuff but it sure does sound good with and old unamplified D-104. Also has Instruction manual with schematic. $99 shipped anywhere in the Continental U.S.

Tnx,
Jim

2114. COLLINS FILTER ID?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-20 00:00:00 UTC
From: john williams <ac6ts@n2.net>
Message-ID: <3976FAA9.96537E6F@n2.net>
Source record: 63778

Group,

I have a unused Collins Mechanical filter and need some help with finding it's properties, (what freq, use, etc.). The model number is "F 455 Y 21 6827" . Other number is 526 9337 00. Can anybody tell me how to read the numbers? I think F 455=freq 455kc but I don't have a clue to the rest.

Also I have a large cylindrical one with a concentric mounting flange. Prox 1/2" dia. and 2-3" long. No numbers at all. I have no equiptment to find what these are.

Thank you for any help or resources where I can find this info.

Hi Skip
You can use Radio Shack part number 32-1031B. It works fine.

Regarding the VF-1 frequency dial...

Thanks for the responses, guys! Several of you generously
offered the loan of a VF-1 dial for me to make a copy of.
I ended up agreeing to buy a whole stack of untested VF-1's
from a gentleman in 9-land. I can get a replacement dial
for my VF-1 and have several others to restore. I will
still attempt my photocopy / transparency dial experiment
just to see if it would have worked!

Thanks and vy 73,

Dean, K5DH

2123. Hallicrafters PM-12 Speaker

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-20 00:00:00 UTC
From: kj4dx@my-deja.com
Message-ID: <8l7srbrv1@nnrp2.deja.com>
Source record: 63787

I've recently acquired an original PM12-S Hallicrafters speaker. The thing is in very, very nice shape. It was "thrown in" with a radio purchased from an antique dealer -- the guy sort of said, "oh, here's an old speaker so you can hear some sound out of that radio....". Once I got the dust off of it I found that there wasn't even a scratch to be found. But I'm still not 100% convinced that it's all there. For that reason, I've got two questions for anyone who knows:

1) Does anyone know if there was any Hallicrafters logo on the front of the PM12 "S" cabinet? There is one clearly on the speaker magnet, but I would suspect that there might have been a small metal "hallicrafters" emblem on the front of the cabinet, too. If there was one on the original, does anyone know a manufacturer that makes reproduction emblems by special order?

2) What would the original connection wire have looked like? Brown fabric-covered ? Two-wire "lamp-cord", or shielded cable? I suspect it's NOT the red and black shiny vinyl speaker wire that is currently attached to the speaker ... :)

And decent medium to Hi-Z mic will work (5K and up). This radio came out before all the 500 ohm input audio rigs did. Heck, a D-104 will work great!! The pins are for mic hot (high) and PTT. If you don't have a book, just set it up properly and ground each pin one at a time. In the SSB or AM mode, the PTT pin will key the rig when you short it to gnd.

Any of the small, mobile/tactical military speakers, LS-xxx , have a small 8-to-600 ohm xformer in them. Find a junker and take out the xformer or get a nice one and use it directly. One can also use a small 6.3 volt filamant transformer. In the "old" days, that's what a lot of us used. (not that old..... novice in '59)

Subject: Anyone recognise this reciever ?

The Reciever is badged by H.H.E.E. which stands for Hai Hua
Electronics Enterprise (China) Corporation, but it was probably
designed and built by another manufacturer and re-badged.

Its a seriously professional 1980's comms RX.

Photo's are available at

Electrc Radio - Back Issues Wanted

To all,

I am looking to fill in missing issues of Electric Radio. I need:

14 through 17
and 19 through 75

I have a number 2 and a number 102 to trade. I also have other
magazines and books for trade.

Subject: F.S. Hallicrafters Skyrider Panoramic SP-44

Good trace. The caps have been replaced. Face looks nice. Cabinet it slides
into could use some paint. No sig. showing on CRT. Maybe one of you guys
that knows more about these than I do can get it working good. Its defiantly
a nice little rig and worthy of attention. I don't know what to ask for it
so best offer gets it plus S.H. CONUS.

Subject: F.S. S-36 not 36A

Hi all. This is a S-36 not an S-36A. Its close to a 36A but its hard to find them with just S-36 embossed on the dial. I think the connections on the back are different than a 36A also. Works Great and looks great. Could use a good alignment but seems close. Nice face and knobs. Real nice radio. It weighs a ton!
$300.00 + S.H. CONUS from Calif. Zip-95901

Subject: FS / FT: EYE TUBES

I have four (4) eye tubes that I won't be needing. They are used / tested pulls. I checked them on a Heathkit TC-2, and the triodes in all four tubes test good. The display is good on (1) 6E5 and (1) 6U5, and dim but still slightly visible on (1) 6E5 and (1) 6U5. I can't do an in-circuit test, since I don't have any equipment that uses these, so the buyer must take these display tubes "as-is". You can see a picture of the tubes at;

http://members.aol.com/ecc81/yardsale

$25 ALL, or trade for chassis mount compactron sockets

If interested, please respond by email.

From: bcts1@aol.com (BCTS1)
Subject: FS:Collins,Johnson,Clegg

For Sale: Johnson 500 RF deck & original Johnson Manual.
Case was glass beaded, powder coated and is ready for Johnson Maroon paint. Front is in OK shape. Has scratches around edges and some scratches on front. Nothing Obscene though. All knobs are there but a couple are missing white pointers. The deck appears totally stock except the clipper circuit looks like it was bypassed for better fidelity audio. This mod was common on many 500's and Valiants. I have had it for awhile and hooked it up to a friends 500 PS/Modulator when I bought it and it worked fine. All tubes are good including the 4-400 final. I was going to build a killer PS/Modulator for it but too many projects- not enough time. I am not giving this one away considering one went on Ebay for $2000 awhile back. First $800+ shipping takes it.

Clegg 22er AM Transceiver. Very good cosmetic shape. Will look nice next to your boatanchor rigs. Works great. Very sensitive; Hears everything my modern FM rig hears (of course not quite as clear because it is AM). Comes with 3 crystals 146.105, 144.450, 145.350. Does not come with a mic- keeping the D-104 for my Collins stuff but it sure does sound good with and old unamplified D-104. Also has instruction manual with schematic. $75+ shipping

Collins 75A1 parts radio. Things that are missing:
Cabinet,
Round Kilocycle dial,
some sheild covers,
(1) RF coil,
It is 95% there. I plugged it in and it gets static but sensitivity is way down. It did a pull in a couple very strong stations but thats it. Cosmeticlly the front is ok with a bit of a wear mark around the tuning dial and some nicks. This is a definite project radio or could be a great source of parts for others but I have no time to part it out or restore it. $185+ shipping

I am near Philadelphia if anyone would like to inspect the gear.
I accept Money orders or Pay-Pal.
Thanks,
Jim

Subject: Help with Abbott TR-4 ultra short wave transcvr

I picked up an Abbott Instruments model TR-4 ultra shortwave
transmitter/receiver today. Does it need a separate power supply? What
is the operating voltage? ac or dc? what is the power out? What is the
oscillator input freq needed to operate it?

Anybody know anything about it? What was it used for? It's an old tube
unit.

Any info would be appreciated.

Thanks de Don..N6NLX.

Subject: COLLINS FILTER ID?

Group,

I have a unused Collins Mechanical filter and need some help with
finding it's properties, (what freq, use, etc.). The model number is "F
455 Y 21 6827" . Other number is 526 9337 00. Can anybody tell me how to
read the numbers? I think F 455=freq 455kc but I don't have a clue to
the rest.

Also I have a large cylindrical one with a concentric mounting flange.
Prox 1/2" dia. and 2-3" long. No numbers at all. I have no equiptment to
find what these are.

Thank you for any help or resources where I can find this info.

From: kj4dx@my-deja.com
Subject: Hallicrafters PM-12 Speaker

I've recently acquired an original PM12-S Hallicrafters speaker. The thing is in very, very nice shape. It was "thrown in" with a radio purchased from an antique dealer -- the guy sort of said, "oh, here's an old speaker so you can hear some sound out of that radio....". Once I got the dust off of it I found that there wasn't even a scratch to be found. But I'm still not 100% convinced that it's all there. For that reason, I've got two questions for anyone who knows:

1) Does anyone know if there was any Hallicrafters logo on the front of the PM12 "S" cabinet? There is one clearly on the speaker magnet, but I would suspect that there might have been a small metal "hallicrafters" emblem on the front of the cabinet, too. If there was one on the original, does anyone know a manufacturer that makes reproduction emblems by special order?

2) What would the original connection wire have looked like? Brown fabric-covered ? Two-wire "lamp-cord", or shielded cable? I suspect it's NOT the red and black shiny vinyl speaker wire that is currently attached to the speaker ... :)

Subject: Mic for boatanchor?

And decent medium to Hi-Z mic will work (5K and up). This radio came out before all the 500 ohm input audio rigs did. Heck, a D-104 will work great!! The pins are for mic hot (high) and PTT. If you don't have a book, just set it up properly and ground each pin one at a time. In the SSB or AM mode, the PTT pin will key the rig when you short it to gnd.

Any of the small, mobile/tactical military speakers, LS-xxx , have a small
8-to-600 ohm xformer in them. Find a junker and take out the xformer or get a
nice one and use it directly. One can also use a small 6.3 volt filamant
transformer. In the "old" days, that's what a lot of us used. (not that
old..... novice in '59)

Good advice and correct....however....when you short that mic pin to
ground dont do it with a finger on it. Your gonna have a few hunderd
volts there.

From: Steve Pazar <zarco@sonic.net>
Message-ID: <397884E1.5BDC@sonic.net>
Source record: 63712

Hi Gang,
I've got the following for sale;

HW-101; 80-10 meter SSB tranceiver in good overall condition. The receiver works, haven't tried the transmitter (can't find my dummy load).
Some dust has accumulated inside the rig, so it will need to be cleaned. A few scratches on the cabinet, and the rubber drive belts on the preselector have deteriorated (easily replacable). Well built, no kludges or mods. Includes 400 Hz CW filter and calibrator. No mic.

SP-600 and HP-23B; External speaker with the power supply built in. Works good and looks good. I've re-formed the caps and they seem to be OK.

Manual for all of above included (original, not a copy).

Asking $225 plus shipping.

Steve WA4DUT/6

Well in that case, try and get your credit card company to refund your money from paypal. Claim fraud on behalf of the party you paid, relay that paypal won't make good, and demand they yank back payment from paypal. Maybe paypal will then yank back payment from the defrauding party. Of course drain your paypal account before you try this!

BTW did anyone read about the phoney www.PayPaI.com (thats paypai.com!). This phoney site tried to get people to give them their credit card numbers and paypal passwords by posting a duplicate of paypals web site. I think they were based in Russia. Anyway after this was posted on slashdot.org they were apparently hacked to death because their site is now gone.

2151. Help Military Transformer References?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-21 00:00:00 UTC

From: "Michael A. Terrell" <michaelaterrell@netscape.net>
Message-ID: <3979211B.E090D555@netscape.net>
Source record: 63720

Use an audio line transformer.

A 25 volt line transformer would be tapped at 1 watt for 625 ohms:

625 ohms/watt

A 70 volt line transformer would be tapped at 8 watts for 625 ohms, or
at 10 Waiis for 500 ohms (Depends on the taps on the transformer.)

5000 ohms/watt

These are only a couple dollars, and are used on commercial sound
systems and can be bought at most real parts houses.

Source record: 63721

You can use a string of forward biased power diodes for regulation.
Typical forward drop is about .6 volts. Test the string with 50 to 500
Ma of current and test the voltage. You should be able to get very
close. Something like an ECG 125 or other 2.5 amp diode should work.
The PIV can be very low, so the parts are very cheap, and even though it
would take about 14, it should still be less than five dollars, and very
reliable. I use forward biased diodes in test fixtures at work for low
voltages that I can't get zeners for, ant they are very temperature
stable. A 400 mv supply only drifts a couple mv all day

Thanks for the reply Joe, I've looked on the site you mention but I
hav'nt seen anything similar there, do you have any further info?. The
Hagenuk connection is pretty good as all the pcb's are marked as such,
but unfortunatly they are now into digital comms and have no interest
in HF comms whatsoever, this info was from an ex hagenuk employee.
cheers Mike W

From: ti2dll@ti2dll.penguinpowered.com (Mario Melendez Esquivel)
Subject: Bendix Radio?

Hi all,

About a year ago, we were given an antique radio which we have only a slight idea of what it is. It's pretty darn old from the looks of it... the radio has a small metal plaque which says the following:

A[]M
RA-1B
110D/30 3

(the [] is a crown symbol)

And another one which states:

AIRCRAFT RADIO RECEIVER
BENDIX RADIO CORPORATION
USA

Can anyone place this "aircraft radio receiver"? What are (or were :) it's capabilities? What was it used for? Does Bendix still exist? Anyone have diagrams for this thing? It'd be interesting to see if it still works, but we'd rather not risk the kind of electric shock that thing could generate it there was a short inside...

Subject: Bendix Radio?

My friend Al VE3AL had one of these in Canada and used it on 80 and 40 M in the early 1950s. I think that it is a communications and Direction finding coverage receiver. It was black and about 8" by 12" by about 24' long if I remember correctly. Al is still alive and in his 60s. He is a mad collector and I would think that he still has it around in his junk shack. He may even have a wiring diagram!
73

Lee ZL2AL - ZL7AA, ZL8RI, ZL9CI, VE3OE

Yesterday it worked.
Today it is not working.
Windows is like that.....

From: Chris Suhar
Subject: Drake T-4XC bad keying

You might try replacing the shaping components for the circuit. There is a diode, resistor and capacitor network that generates a pulse to activate the vox. I assume you changed the relay tube already.

Subject: FOR SALE: GONSET I & VFO

Original 2 meter Gonset Communicator AM transceiver from the mid 1950's in good condition. The tubes all checked OK & I had it on the air this week. It transmits good quality AM and receives AM signals and also FM repeaters by "slope" detection (tuning slightly off to one side). A picture is available. Price is $85 for the transceiver.
I also have the matching Gonset 2 meter VFO/Audio Preamp. The price for everything is $120 plus s & h from Schenectady, NY

From: N3BJ
Subject: FS: Heathkit DX-60, HG-10, MT-1 package

For Sale: Heathkit DX-60 and HG-10, both the original models, not the later A or B versions. Work fine, full, stable output on all bands. Good condition, no rust, intact, all original knobs, front panels of both very nice. Cabinets could use a little work, but no dents or dings. Band drum on VFO is not cracked, which is rare. W7FG manual on DX-60 included.

Will throw in Heathkit MT-1 mobile transmitter in fair shape, knobs still shiny, untested, but intact. Need to make some room here.

$135 shipped for the lot.

From: Jim Bo
Subject: HRO-500 Help

Hello,

I am my own worst enemy.

I started to do an alignment on the HRO-500 and was adjusting the

L-24, the BFO transformer, and I cranked the core to far into the

coil form and it got stuck.
I tried various ways of freeing the core with the end result L-24

getting trashed.

With great pain, I removed L-24 and disassembled the transformer,

only to find that the plastic tube that is the coil form, broke
free of the base. This resulted in the coil form turning and
tearing the three wires from the pins of the transformer base.

Aarghhhhhhhh.....

I can clearly see three wires and hopefully will be able to
measure the inductance between the leads to determine what
winding is what ONLY if I am reading the schematic correctly.

When looking at L-24 on the schematic, it shows the transformer
tapped, with the tap going to the product detector. This tap is
shown to be near the bottom of the inductor symbol. Is it safe to

assume that the schematic representation is the same as how the
transformer is installed in the circuit, i.e., the winding with
the lower inductance is the tap?

Does anyone know the specs on L-24? Number of Turns? Where the
tap should be?
Who was the manufacturer? Was it JW Miller?
What was the manufacturers part number?

The metal can has two part numbers stamped in it. One is B-51334

which is the National part number, the other is 273F6523 which
may be the manufacturers part number.

As a real real long long shot, does anyone have an L-24?

I am determined to get the HRO-500 on the air again, but will
need some help from others.

Thanks for reading this post.

From: "gbowne"
Subject: RCA AM transmitters

I have an interesting chance to purchase some nice RCA AM transmitters from the 1940's to 1950's (and possibly earlier) in various stages of completeness very, very cheaply before they are broken up for parts and surplus.

First of all, does anyone know what models were made in that era and can give me the numbers and data?

I need manuals ; i.e. ; Parts, service, mainenance, owners, installation, etc.

Are original parts and tubes still available? If anyone has anything that will work with these transmitters email me with what you have and prices.

They will be made to go back on air by a local non profit AM radio station.

Thanks,

Source record: 63654

Their website says that they get paid from people who leave a balence sitting in PayPal, and they collect interest off this balence. As far as I know neither buyer or seller pays a fee. I've used it a few times and it seems to work as advertised. When you withdraw your money by electronic transfer to your bank account it still takes about 3 days, this time they must collect interest on. With enough users a rolling balence would be maintained to collect interest on or invest. They really do give you $5 just to open an account.

I can hear the comments, no I don't work for PayPal!

You are welcome to download the Viking II manual from the BoatAnchor
Manual Archive. BAMA is a cooperative project making manuals
available on the internet without cost. Several hundred manuals are
currently available and new ones are being added regularly. Uploads
of manuals currently missing from the collection are, of course,
encouraged and greatly appreciated.

Message-ID: <397A0CA2.50C44974@ix.netcom.com>
Source record: 63662

Hello,

I have a National HRO-500 receiver that has a defective BFO coil.

The reference designator is L-24. It is a 1 milli-henry
adjustable coil with a low impedance tap.

On a long shot, does any one have one that they can part with?

The manufacturer's part number is 273F6523. Does anyone
recognize this part number scheme that could identify the
original manufacturer of this coil?

The size of the "I.F." metal can that houses the coil is 3/4" x
3/4" x 2.0" and has a slug to adjust the inductance.

Does anyone have the winding info (number of turns) on this coil,
especially where the low impedance tap should be on the winding?
Worst case I could wind my own if I had the # of turns for the
low impedance tap.

Any and all help greatly appreciated, I want to get this radio
back into service.

Does anyone have, or know the whereabouts of the long hex tool used to remove the oscillator cover in the HP606 signal generator? I need one to check the tubes, as it is not possible to get to them. Even a very long allen set would work. Tried the auto parts and Ace hardware. No luck. The original is usually kept with the gererator in a pair of clips on the cover top.

You can e-mail me direct: wb6vse@ipa.net

Thanks
Mike

Mike,

I have both an "A" and a "B" model. I didn't get the tool with either one. I wound up using a couple of EXCELITE extension shafts. Works fine on mine. After I got those hex screws out, I LEFT them out.

Good luck,
Wayne

I am bringing an NC-46 back to life and have noticed several wiring differences from the schematic, expecially on the 6K8 and 6H6. The receiver soldering looks like original assembly. Anyone serviced this receiver and found the same? These are above and beyond the mods in the manual.
Also looking for the speaker for this unit.

Thanks

John

ITT Mackay 3010C (vintage 1970's)
Removed by myself from the USS Keystone Caynon of the BP OIL Tanker
Fleet from Alaska.
This radio was used in the captain's cabin to listen to SW broadcast and

the ball games !!
Front panel is prefect no noticeable wear. Electrical perfect and
perfect alignment !
70khz-30 mhz, black face. Triple conversion, Collins mechanical filters
500kc, 2.9kc and a 6 kc AM xtal filter.
If you know receivers then you know this one. This is an excellent
3010C.
I can send scans of the radio. Excellent article on this radio in
Electric Radio Feb 97. Shortwave Receivers Past & Present Page 263 .

Extra 7788 tube and original owners manual plus a second complete copy.

$900 + shipping from 83713.
Box est to weigh 55 lbs. Ground UPS if buyer elects is est @ $38.00
I have a custom double wall box with foam inserts. I can be reached at
home @ 208-938-3103 9AM-9PM MST for questions.

NOTE : I also have a parts radio that I can sell ($ 125) as they are
so rare there are none on the market at present !

> matching transformer?

Skip:

A filament transformer with a 120-volt primary and 12.6-volt secondary
works well. The turns ratio is about 10:1. That yields an impedance
ratio of about 100:1 and that will match a 600-ohm output to a 6-ohm
load, close enough to 8 ohms to work nicely.

2197. Help with Ameritron AL 84

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-22 00:00:00 UTC
From: Mike <michaelj@networktel.net>
Message-ID: <KGbe5.542$qm1.10269@news1.atlantic.net>
Source record: 63734
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

I recently rebuilt an Ameritron 84 and have had great results with 20 meters getting the full 400 Watts out with 100 watts in SSB. Great reports on 15, 20, and 40. Rig has been very stable and clean for a tube rig.

I contacted Ameritron on the mods for 10 meters, They faxed me the mods but their example amp is a bit different than mine. They show a tap off the tank coil two turns from the 15 meter tap. Their diagram shows a 5 coil tank coil. Mine has seven turns, Their other mod to complete it has a jumper between the input resistor and a 68pf cap. Mine rig has 3 caps in this location and none of them are marked. I have tried several different jumper locations with no luck.

Their Mod instructions are for serial # 100 and higher. My serial # is in the 70 range.

I talked to an Ameritron tech and he had no idea as these AL 84's were made in Ohio before their move to Miss.

Any one with any ideas is appreciated! I use 10 meter in my car and the band is really starting to open up. I'd like the extra punch on the base unit Yaesu FT840 which gives me about 80+ into a beam.

Thanks Mike

Hello,
I want to trade an HF transceiver MOTOROLA model MICOM-XF.
This is an outstanding digital radio,1.6 to 30 Mc/s tx & rx, conservatively rated for 125 watt PEP, suitable for harsh environment as per MIL-STD-810C, full computer control capability, etc.. It come with complete set of documentation.

I want to trade it for a very good condition Collins 51J4 or 75S3-B/C, I consider also National HRO-500.

Pictures available by mail on request.

Thanks for bandwith and 73' de

Claudio

BIGGEST THREAT to U.S. National parks?
Not pollution or environmental issues...
It's UN seizure, as allowed by our "political leaders",
already seen in Yellowstone Park and the Grand Canyon!
.....
American government - giving our country away, million
by million, and acre by acre - to many who are sworn enemies.

From: Steve Fried <k2pts@home.com>
Message-ID: <397B81FD.E6BBE4B@home.com>
Source record: 63557

Hi
This is a common problem with all of them. With or without the time sequence keying mod.
I have never heard of anyone actually "curing" the problem. I don't notice it in my Valiant. I do notice it in my Ranger.
Have a few friends who have the same problem. Doesn't seem to be particular to any production run/mod, etc.
But it is there. I have just learned to live with it. Albeit, it is annoying.
Oh well.

From: robinson@srsuna.shlrc.mq.edu.au (Ray Robinson)
Subject: Bendix Radio?

Hi,

It is called an RA-1B made in the USA by Bendix.
The A crown M means the British Air Ministry.

It came into use in commercial service immediately
prior to WW2 with US airlines. It was taken on by the
military and produced in large quantities.
Fitted to many different types of aircraft
including Catalinas (PBY's).

Covers .15-1.5 mcs, 1.8-15 mcs in 6 bands.
Eight valves, 2 uv sensitivity, IF 1630 kcs.
Filament requirements are 12 vdc 1.5 A or 24 vdc @ .8A.
External MP5A24 dynamotor provides 225 vdc @ 70 ma.

It had some good features regarding ham use,
used 6.3 v valves so the normal 12/24v arrangement
could be easily changed, could be controlled from the front panel
so that you didn't need a MR-1B remote control, had no inbuilt supply
so an external one could be easily built.
Consequently, most are in good condition with few unreversable mods.

Regards
Ray

Subject: Drake T-4XC bad keying

You might try cleaning the relay. This happened in an older T4X ...either
cut off a character or produced a bad character.
Used relay contact cleaner and burnishing tool. After cleaning it worked
great again.

Subject: Drake T-4XC bad keying

Thanks for the response.
However, I now have substituted both the relay and the VOX control tube V10
and there is no difference at all.
The relay rise time is 9 ms and this is probably where it all comes from.
Maybe all the T-4XC have this behaviour. At least I know 2 other with the
same distorsion when the relay activates.
I will try to use a fast vacuum relay (1ms) instead of the old one.

All Gear working last time tested unless noted. Shipping is extra. Please reply to my email address.
Thanks

Tempo-1: All Tube Ham Transceiver with Power Supply. Covers 80-10 meters. Looks good and works well. $200

Pearce Simpson: Guardian 23- All tube CB Transceiver/with mobile power cord and mounting bracket. Looks and works Good. $100

Swan 14X DC Power Supply Module: No way to test but was told it was working OK. As is $45.

Siltronix Model 90-6 VFO: Excellent condition with three position crystal switch $60.

Marantz Model 2220B: Stereophonic Receiver, with gyro-touch tuning, blue dial and optional real wood case. This unit is in excellent condition, both in looks and operation. I would rate a 9.7. Also have original manual, in excellent condition. $175

AR Inc: Stereo Amp, All solid state. $100. Please don't ask the model #. I have been asked this many times and unable to locate on the name plate. The serial # is: AA002291. It comes with the optinal wood case the face is Gold Alumi. With the following controls: Mode selector, Bass, Treble, balance and volume. In the upper left corner is a red LED and on the bottom right is a normal/monitor switch. I would rate it a 7 on appearance.

Channel Master: Tube Stereo Receiver (Model 6612) and matching amp (Model 6601) Looks good and plays on FM only. AM not working. $100

Traynor: Group Two B- Audio Amp Head. High/ Low misc. in puts. Master volume, volume, bass, treble and tone shaper controls. All solid state $125

PRO 2003 Scanner: Radio Shack 50 channel(30-512 Mhz.) Digital Scanner with FM broadcast band included. Have two, one is working the other is a complete non working unit. $115 for both.

Bearcat 250 Scanner: Have two. One working at times and one for parts. $50 for both.

RS Pro 30 Scanner: Hand held 16 channel Digital scanner. Looks & Works good, but the battery cover plate is missing $35.

From: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Subject: Guide to the rec.radio Newsgroups

Archive-name: radio/personal-intro

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to Jeffrey Herman, KH6O, jeffreyh@hawaii.edu, or Paul
Schleck, K3FU, pschleck@novia.net.

This message was last changed on 14 March, 1998.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were

created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any amateur radio-related message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec.radio.info-moderator@primenet.com. Inquires and other adminis-trivia should be directed to rec.radio.info-request@primenet.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups r.r.amateur.antenna, .boatanchors, .dx, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, the older tube based amateur, military, and commercial gear, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter. The .dx group is devoted to long distance amateur communications. Each of these subgroups has its own charter and FAQ; please refer to the archives to find these documents.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s

with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists
==========

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas. PLEASE BE SURE TO SAVE THE WELCOME MESSAGE YOU RECEIVE AFTER SUBSCRIBING -- IT WILL CONTAIN IMPORTANT INFO REGARDING UNSUBSCRIBING!

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send an email to cq-contesting-request@contesting.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

The QRP-L list is devoted to building and operating gear at low-power outputs. To subscribe, send an email to listproc@lehigh.edu and only write: subscribe qrp-l Your Name.

The TopBand e-list is devoted to all areas of operation on 160m. To subscribe, send an email to majordomo@contesting.com and only write: subscribe topband and follow the instructions you'll be sent.
This site, contesting.com, also hosts a couple dozen other ham-related e-lists. Use the above address, and only write: lists to get the entire index.

The Boatanchors e-list is devoted to the older tube-based ham, military, and commercial communications gear. To subscribe, send an email to: listserv@listserv.tempe.gov and only write: subscribe boatanchors

For homebuilding transmitters and receivers using tube technology, there is the Glowbugs e-list; send an email to:
majordomo@piobaire.mines.uidaho.edu and only write:
subscribe glowbugs

The VHF DX discussion list can be accessed by sending an email to: majordomo@blacksheep.org and only writing: subscribe VHF-DX-discuss.

We now have a list devoted to amateur radio history. To subscribe, send an email to: ham-radio-history-subscribe@egroups.com - leave the body of the message blank.

Qth.net hosts over 100 ham-related e-lists, including lists devoted
to each state, manufacturer, mode, band - too many to state here. Send
an email to majordomo@qth.net and only write: lists to get the
complete index.

For one of the most complete indexes of email lists, see the excellent
web site http://pw2.netcom.com/~ac6v/pageae.html

Please do NOT send subscription requests to the mailing lists themselves;
that doesn't work very often, and is very annoying to those on the list.
Also, please keep your electronic mail address current with any mailing
lists you subscribe to, as dealing with returned email is a nuisance for the
person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine
interest in both groups in the topic being discussed, and when you do, please
include a header line of the form "Followup-To: group.name" in your article's
headers (before the first blank line). This will cause followups to your
article to go to the group listed in the Followup-To: line. If you wish
to have replies to go to you by email, rather than be posted, use the word
"poster" instead of the name of a group. Such a line appears in the headers
of this article.

One of the few examples of productive cross-posting is with the rec.radio.info
newsgroup. To provide a filtered presentation of information articles, while
still maintaining visibility in their home newsgroups, the moderator strongly
encourages cross-posting. All information articles should be submitted to the
rec.radio.info moderator so that he may simultaneously cross-post your
information to the appropriate newsgroups. Most newsreaders will only present
the article once, and network bandwidth is conserved since only one article is
propagated. If you make regular informational postings, and have made
arrangements with the moderator to post directly to the group, please
cross-post as appropriate.

Don,

The Abbot TR-4's were used by the War Emergency Radio Service just before and during WWII. The standard model operated on the old 2-1/2 meter amateur band at about 112Mhz. It is rare to find one that has not been modified to operate on 144Mhz, or as close as those old oscillators got. The receiver is a superregen and the transmitter is a modulated oscillator. The audio section consists (usually) of a 7F7 preamp and a 6L6 or 6V6 output tube. The operating voltages are 6.3VAC for the filaments, 250-300VDC for the plates, and a -22V bias supply, which is also used for the carbon microphone. The transmitter output is about 2-1/2 watts.

They are interesting as historical antiques, but I wouldn't attempt to put one on the air these days. The receiver alone would probably disrupt 2m operations for miles.

I restored one recently, and tested it in a screened room. When I saw what the output of the transmitter looked like, I gave up all thoughts of putting it on the air, even for nostalgia.

In the late 50's, I bought six TR-4's on the surplus market for $5.00 each. I modified them for our Civil Defense net on 6m. I scrapped the original transmitters, and added a small crystal controlled two tube circuit in the space formerly occupied by the transmitter tube. The original transmitter tuning circuit became the output tank. We used them for several years, some as mobiles with vibrator supplies.

It was nice to see the answer, especially since the guy who offered a
manual could have taken the time to include some details before hawking
the manual, for those of us who were dying for an answer.

I had a vague idea that it was the sort of design that you describe,
but wasn't certain enough to answer. That sort of thing, not much more
than an oscillator for transmit, and a superregen receiver, may not
have done much for weak signal operation, but sure did help to popularize
the bands. That sort of thing helped to get things going on six, I
guess they were popular when it was the 5 meter band, and then when
the band got popular and new regulations came into effect, the same
sort of circuitry helped to get 2 1/2 meters going. And then the design
moved up to the 420 MHz band (and of course, 1215 got a boost from the
APX-6 surplus rigs). Even when modulated oscillators became a non-no,
one could say the idea of simple rigs lived on in the Heathkit Lunchbox
series, ie the Sixer and Twoer.

Subject: Manual for a T-368 Transmitter

WOW! I received 12 replies via private e-mail! I did not know that
there would be that much interest in the T-368.

John, K2TQN was the first to reply so he gets the manual. (John , send
me your address and it is yours. Just send me postage after you receive
it) It is a copy that is about 100 pages two sided.

For the others that requested the manual - if you only need a particular
section, i.e. schematic of a section etc. send me an e-mail. I will
scan that section and e-mail it to you or perhaps post it on my web site
so that all could download it. I am sorry but due to the large number
of pages I do not have the time to copy each page and sent it to all of
you.

Subject: Taylor 572B's any good? Best 572B?

Hello. I was wondering if any of you have used the Taylor (Chineese)
572B's in your amp and if so what do you think of them. I will be placing
them in a Ameritron 811H. My 811's (USSR) are over 5 years old and still
good, just looking for a more rugged tube than the 811.

My experience is tht they aren't as sturdy as the Svetlana 572's, but if you
are going to use them for replacements for 811's then I think they should do
just fine. They will never be taxed to produce to their limits.

Greetings fellow Hickok-junkie!

Try Fair Radio, they had some awhile back :

http://www.fairradio.com/produc.htm

Or, perhaps 'Surplus Stuff' :

http://www.surplustuff.com/

BTW, i've been looking for the compactron adaptor for the Hickok, it is part #
1704 no luck yet, if you run across one, please let me know...for your reading
pleasure, here are some great Hickok-related sites... :

http://www.geocities.com/SiliconValley/6992/tv7.htm

http://www2.gdi.net/~padgett/hickok.htm

http://www.0wned.org/~hstraub/hickok.htm

Enjoy, and best of luck with your search.

Regards,
Joe Pratt

Subject: FORGET PAYPAL reimbursement in fraud cases

Their website says that they get paid from people who leave a balence sitting
in PayPal, and they collect interest off this balence. As far as I know
neither buyer or seller pays a fee. I've used it a few times and it seems to
work as advertised. When you withdraw your money by electronic transfer to
your bank account it still takes about 3 days, this time they must collect
interest on. With enough users a rolling balence would be maintained to
collect interest on or invest. They really do give you $5 just to open an
account.

I can hear the comments, no I don't work for PayPal!

From: "Mike" <wb6vse@ipa.net>
Subject: HP 606 tool needed

Does anyone have, or know the whereabouts of the long hex tool used to remove the oscillator cover in the HP606 signal generator? I need one to check the tubes, as it is not possible to get to them. Even a very long allen set would work. Tried the auto parts and Ace hardware. No luck. The original is usually kept with the gererator in a pair of clips on the cover top.

You can e-mail me direct: wb6vse@ipa.net

Thanks
Mike

Subject: HP 606 tool needed

Mike,

I have both an "A" and a "B" model. I didn't get the tool with either one. I wound up using a couple of EXCELITE extension shafts. Works fine on mine. After I got those hex screws out, I LEFT them out.

Good luck,
Wayne

From: Jim Bo <jbollit@ix.netcom.com>
Subject: IF Transformer National HRO-500 Help

Hello,

I have a National HRO-500 receiver that has a defective BFO coil.

The reference designator is L-24. It is a 1 milli-henry
adjustable coil with a low impedance tap.

On a long shot, does any one have one that they can part with?

The manufacturer's part number is 273F6523. Does anyone
recognize this part number scheme that could identify the
original manufacturer of this coil?

The size of the "I.F." metal can that houses the coil is 3/4" x
3/4" x 2.0" and has a slug to adjust the inductance.

Does anyone have the winding info (number of turns) on this coil,
especially where the low impedance tap should be on the winding?
Worst case I could wind my own if I had the # of turns for the
low impedance tap.

Any and all help greatly appreciated, I want to get this radio
back into service.

Jim

2237. Identify This Transformer?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-23 00:00:00 UTC
From: Bruce E Stock <stockb@accessone.com>
Message-ID: <397B0F9C.1044@accessone.com>
Source record: 63690

I have a good-sized power transformer dated 1953 on the bottom, but with no other identifying marks. I suspect it was from one of the common transmitters of that day, but I'd like to determine which one so I can get an idea of what the current ratings of the windings are.

The secondaries of the transformer are:

900 VRMS Center-tapped
6.3 VRMS Center-tapped
5 VRMS
10 VRMS
230 VRMS

Any ideas on what rig this beastie might have come from?

73, Bruce AB7YD

I had to rewind one of the coils on my 500, and I carefully measured all the dimensions of the form, counted the windings, and so forth, and was quite successful at it. If I can do it, anyone can! <g>

BTW, you might've heard that you can't use replacement transistors, the NTE types and so forth, in this radio. Not exactly true -- you can use 'em but buy three or four, you just have to find the one that works!

Also, alignment of the synthesizer IF is very critical, it has an effect on the alignment of the radio in general -- if you can't align at one end of a band or the other, that's most likely the cause.

Good Luck!

Well, let's see...
I bought my 32S-1 with power supply/speaker for 150 dollars.
I bought my 75S-1 for 200 dollars.
I bought my station console for 100 dollars.
I got my 30L-1 for free because it didn't work but works now.
So I got my complete Collins station for only 450 dollars.
And every piece is a 8 or better.
Hmmm, maybe I should ask 2000 dollars for mine!
Naaa, I can't rip people off like that.

2246. Re: Tripplett, Eico, Heathkit VTM values

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-24 00:00:00 UTC
From: hwh <74361.2114@CompuServe.COM>
Message-ID: <8lgrsj$f0g$1@sshuraaa-i-1.production.compuserve.com>
Source record: 63564

Ebay is a useful place to research what folks are willing to pay for
older gear like that. I've picked up a Heath VTVM for about $25
(though some sell a bit higher) and the Eico's are probably less
(just a guess).

2249. Re: Ranger/Valiant Frequency Shift Problem

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-24 00:00:00 UTC
From: W9STB <telegrapher@hotmail.com>
Message-ID: <2RYe5.5671$ga2.145731@newsread2.prod.itd.earthlink.net>
Source record: 63567

FYI to all the interested Ranger/Valiant owners who are reading this posting...

I received a nice email from Joe Tyburczy, W1GFH/6.
In it, he says:

"My Ranger experiences the same problem when not properly warmed up. Wiggle the 6AU6 in the VFO compartment. Check and replace the tube if needed. Check the screen resistor (R1-100K) for continuity. Check the hardware on the variable cap. Tighten all mechanical hardware."

Thanks Joe.

In on the air QSOs on 80M CW, both K9KEU and K8TFC/9 indicate that the problem is worse on 40 than on 80 meters.

In late sixties I owned both a Ranger I and a Ranger II; setting side by side on the desk. I do not recall ever having this problem on either. As such, I am wondering, has anyone else noticed the shift as being worse on the Ranger I than the Ranger II or vice versa?

Thanks for your input.

It appears to be motor driven (the driving mechanism is in the
cylindrical body).

I have photos and a resistance table of the connector pins available
if needed. please email if i can answer any questions.

Can anyone help? email K3NCB@arrl.net

BIGGEST THREAT to U.S. National parks?
Not pollution or environmental issues...
It's UN seizure, as allowed by our "political leaders",
already seen in Yellowstone Park and the Grand Canyon!
.....
American government - giving our country away, million
by million, and acre by acre - to many who are sworn enemies.

Well, let's see...
I bought my 32S-1 with power supply/speaker for 150 dollars.
I bought my 75S-1 for 200 dollars.
I bought my station console for 100 dollars.
I got my 30L-1 for free because it didn't work but works now.
So I got my complete Collins station for only 450 dollars.
And every piece is a 8 or better.
Hmmm, maybe I should ask 2000 dollars for mine!
Naaa, I can't rip people off like that.

From: Bruce E Stock
Subject: Identify This Transformer?

I have a good-sized power transformer dated 1953 on the bottom, but with
no other identifying marks. I suspect it was from one of the common
transmitters of that day, but I'd like to determine which one so I can
get an idea of what the current ratings of the windings are.

The secondaries of the transformer are:

900 VRMS Center-tapped
6.3 VRMS Center-tapped
5 VRMS
10 VRMS
230 VRMS

Any ideas on what rig this beastie might have come from?

>
>Jim
>*

I had to rewind one of the coils on my 500, and I carefully measured all the dimensions of the form, counted the windings, and so forth, and was quite successful at it. If I can do it, anyone can!

BTW, you might've heard that you can't use replacement transistors, the NTE types and so forth, in this radio. Not exactly true -- you can use 'em but buy three or four, you just have to find the one that works!

Also, alignment of the synthesizer IF is very critical, it has an effect on the alignment of the radio in general -- if you can't align at one end of a band or the other, that's most likely the cause.

Good Luck!

From: Steve Fried
Subject: Ranger/Valiant Frequency Shift Problem

Hi
This is a common problem with all of them. With or without the time sequence
keying mod.
I have never heard of anyone actually "curing" the problem. I don't notice it
in my Valiant. I do notice it in my Ranger.
Have a few friends who have the same problem. Doesn't seem to be particular to
any production run/mod, etc.
But it is there. I have just learned to live with it. Albeit, it is annoying.
Oh well.

Subject: Yaesu FT-101E Station

I am thinking of selling my Yaesu FT-101E station. It includes
(1)FT-101E transceiver, (1)YO-101 scope, (1)YC-601 digital display and
(1)FL-2100F Amp. All are in very good condition, electronically and
cosmetically. Plastic is still on the face of the radio and amp. Talk me
into parting with it. Reply to my e-mail because I don't hang out here in
the news groups very often. My e-mail address is as follows:
pigsty@mpinet.net Thanks for your time....."Porky" KA4ZSG.

For Sale: Collins KWM-2 station.
Have a KWM-2, 516F-2 power supply and 312B-4 Spkr/wattmeter console for sale. All 3 pieces are excellent +++ condition. No scratches on cases or front panels and all is working 100%. Will ship internationally. Prices are KWM-2 $850.00, 516F-2 $375.00, and 312B-4 $360.00. All is Winged Emblem and currently on the air and working fine. Will only sell 516F-2 and 312B-4 after KWM-2 sells. Prices do not include shipping. Will only ship via Express Mail to avoid damage.

Hi ...

I have a 1967 vintage R.F. signal generator that I'm refurbishing and in the process of disassembly, I had the misfortune of breaking a diode - 1N830A - this is obviously an obsolete diode as I'm unable to find it listed in any current semiconductor cross reference. I can't even find it listed in the few vintage catalogs I have of that time period. This diode had a glass envelope like a signal diode and was used in the R.F. sense (microvolt meter) circuit. If someone has the specs on this diode, I'm sure I could find a modern substitute.

Thanks for the help

Brian - KB8IIC

hmmm. My JV Navigator does that too... always thought it was a VR tube problem or the band switch. Check both. Nothing wrong.

Have learned to live with it. Some of my pals on 40 know when I'm using the Navigator. At 20 watts output, I'm not going to worry about it.

Only problem are those darn OO QSL cards I get in the mail. Usually the OO checks the drifting/chirp box and writes something about the FCC requiring engineering state of the art.

I write back and say it was state of the art -

My Motorola manual only lists it as a silicon UHF Detector diode.

I have an idea. Dig up an old UHF tv tuner (you know the ones with a three gang variable cap in a two by nothing box that sat next to a VHF switch type tuner) and pull out the mixer diode. It won't be an exact match, but it might get you going until and exact sub comes along.

Hi,

I'm in the process of refurbishing a 1967 vintage R.F. signal generator and had the misfortune of breaking a diode - 1N830A - during disassembly - This diode is in the R.F. detector (microvolt meter circuit) and appears to have been some sort of signal type diode with a glass envelope. I assume this diode has long been discontinued as I can't find it listed in any current cross reference. Even my limited catalogs of that time period don't list it. If someone knows the specs, I'm sure I could find a modern substitute. Any help is appreciated.

Thanks,
Brian - KB8IIC

I have in good condition a Collins 212Z-1 Remote Amplifier. This is a solid state, 4 Channel AC or Battery operated portable in a case used for on the spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent for AM Transmitters requiring line level audio input. Built in 400Hz tone for setups and program monitor for headphones. All XLR inputs and also telephone connections. With a really large VU Meter in the center makes it a great addition to any station. $395 each plus shipping.

A RARE FIND!! Unassembled Heathkit HO-13 Ham-Scan Panoramic Adaptor, designed to provide spectrum display (a visual display of received signal amplitude versus frequency) when used in conjunction with amateur band and general coverage receivers. The continuously variable frequency width (30 khz to 100 khz) is centered on the intermediate frequency (I.F.) of the receiver. Useable with any one of the following I.F. frequencies: 455, 1600, 1650, 1681, 2075, 2215, 2445, 3000, 3055 or 3395 khz. Uses 3" CRT display. Weighs 11 lbs. Brand new, unassembled kit in original factory carton, complete with assembly/instruction manual.

From: Chris <ck5@ix.netcom.com>
Subject: Collins 212Z-1 Remote Amplifier for sale

I have in good condition a 212Z-1 Remote Amplifier. This is a solid
state, 4 Channel AC or Battery operated portable in a case used for on
the spot broadcasts. Freq response 50-15KHz gain 90dB. These are
excellent for AM Transmitters requiring line level audio input. Built
in 400Hz tone for setups and program monitor for headphones. All XLR
inputs and also telephone connections. With a really large VU Meter in
the center makes it a real great addition to any station. $395 each
plus shipping.

Subject: Mic for boatanchor?

Hi folks,

I've got a Hallicrafters SR-500 HF rig (about 30 yrs old, I think), but I
don't have a mike for it. The mike connection has two conductors inside the
connector plus a shield that appears to be grounded to the rig chassis.
What kind of mike would work with this rig? Any specific recommendations
would be appreciated.

Also, what is this radio (with AC power supply) worth? It seems to work
good & is in very good condition cosmetically.

Thanks,
Rodney - KF4COV

From: k5dh@raytheon.com (Dean Hemphill, K5DH)
Subject: Need help with Heathkit VF-1 vfo

Hi gang,

I have a favor to ask, and it's going to take a bit of trust
on someone's part...

I am fixing up a Heathkit VF-1 vfo to go with a DX-40 that I
am about finished bringing back from the dead (literally!).
The VF-1 is in very good condition internally, but the round
plastic frequency dial has a bunch of the markings worn off
from being misaligned and rubbing against the inside of the
front panel over the years (before I got it). I have been
unable to locate a replacement. I have an idea; however, it
requires that someone loan me an intact VF-1 frequancy dial!

I plan to photocopy the dial onto a piece of transparency
material (the kind used in overhead vu-graf projectors). I
would then make a round disk out of translucent off-white

plastic, affix the transparency to it, and *voila*, I would have a new dial that should work fine! I'm not concerned about it looking "factory", just being correct and usable (the DX-40 it's gonna be used with isn't original either).

Now... if I could just find someone who would trust me and loan me their VF-1 dial. I don't know how to instill good confidence, except to say that I'm an Extra class ham (for a long time), I've been an active ham for 23 years, I have an outstanding feedback profile on eBay, a lot of folks on the newsgroups have sold to me, bought from me, and traded with me, and I promise to treat your loaner dial with the utmost care, pay shipping and insurance both ways, and get it back to you very quickly. Plus, I'm a serious CW op and always have been! You gotta respect that...

I'll even make extra copies and make 'em available for FREE to anyone who wants one (there's gotta be someone else out there in this same predicament).

Please, will you help me?

73,
Dean, K5DH

From: n2ey@aol.com (N2EY)
Subject: Need help with Heathkit VF-1 vfo

Hello Dean,

Sorry, I don't have one, but here are some ideas:

1) The VFO dial in the DX-100 us identical to the VF-1.

2) If someone doesn't want to send the actual dial, they could send a photocopy of it that you could copy

3) It's a lot of work, but if you have a CAD program, you could draw a new dial from scratch and print it out. You could make a paper-and-pencil dial and mark it with the actual measured frequencies, then draw the CAD version. (I do this with my homebrew rgs, using an LM freqmeter. Looks great).

The VF-1 and some other BA gear (EFJ 122) has a range for 11, which is useless today. This range is usually just the 40 meter range with a padder. By adding a fixed silver mica capacitor in parallel with that padder, the range can be brought down to the 6 MHz area for 17 or 12 meters, or to the 5 MHz area for 30 meters. If you do version 3, you can have a calibrated scale for that range on the new bands.

Will keep an eye out for a VF-1 or DX-100...

From: "Bill Evans" <bevans@ebsys.mb.ca>
Subject: Need Help With HQ-170C

I am having intermittent receiver mute recovery problems
with my Hammarlund HQ-170C, used in conjunction with a
Johnson Ranger transmitter. On a significant number of
occasions when I release the D-104 microphone bar to
receive, the HQ-170C stays muted and will remain muted until
I give the PTT one, two, three - or as many as six "pumps".
I employ an external TR relay, controlled by the Ranger PTT.

At first I thought the auxiliary contacts on the TR relay
were sticking, as a normally closed contact pair is used in
conjunction with the 170C relay socket to operate the
muting. However, everything works fine with the auxiliary
contacts themselves, which switch -108 VDC to the RF stage
and the two IF amplifiers when the receiver is muted.
he -108 VDC disappears instantly when I release the
microphone bar but the receiver may remain muted. If I
don't clear the condition by pumping the PTT until the
muting drops, the receiver looks like it will stay muted
forever. (Power "off" and working all the other switches
does nothing to clear the condition.)

Can anybody suggest what the problem is in this situation?

Subject: RCA AM transmitters

We have an RCA BC250 AM broadcast Transmitter. If these are what you have
available, I have the Manual. It uses solid state or Murcury Vapour diodes,
and since it is plate modulated, it sports a pair of 813's for the
modulators and a paiir for the RF amps. It is a wonderful machine. All the
tubes are available and not at all expensive. I have boxes of 813's and a
few graphite ones I picked up at a swap meet for 20 bucks a pair. I believe
it's a late 50's vintage.
Good luck!

I don't remember a lot about the RME6900, but I had one when they first came
out around 1961. They were a relatively nice receiver, with one of the
smoothest flywheel dial mechanisms around.

As I recall, it only covered the 80 through 10 meter ham bands.

As for manufacture it was made by RME.
Which I "believe" stands for Radio Manufacturing and Engineering...As I said
it's been a *Long* time since I had one.

The RME 69? predated the 6900 and that is about all I "think" I remember
<:-))

Thanks to all who responded to my inquiry. The general concensus is the
Kenwood would be a better choice as far as transmit, due to the 6146 finals.

Now the big question: Does anyone have a set of Kenwood twins in good working
and cosmetic condition that they would like to part with?

I would prefer the 599D, but would consider any model. For the time being I
can also get by with just the receiver.

Please e-mail me at both addresses below.

Thanks for all your help!

Subject: Tripplett, Eico, Heathkit VTM values

Well, I can give my opinion. Others may disagree. But I think these are all inexpensive VTVMs without any particular collector value or usability features to attract a crowd. So I would say $10-$15 each, preferably with probes and manuals, and assuming good condition.
Good luck.
73, Don Merz, N3RHT

Subject: Wanted: R-388/URR Parts

I was given a Collins R-388/URR. Its pretty filthy because its missing its cover. Any idea where I can get a replacement? I'm also interested in a desktop rack to hold it. It doesn't have to be the authentic item. Its 10.5 inches tall and 13 inches deep. If you contact me, please remove the '-dummy' from my e-mail address.

Subject: ~~ATTN: 2 meter AM'ers!~~

For Sale: Clegg 22er AM Transceiver.
Very good cosmetic shape. Will look nice next to your boatanchor rigs. Works great, Very sensitive; Hears everything my modern FM rig hears (of course not quite as clear because I am listening on AM). Comes with 3 crystals 146.105, 144.450, 145.350. Does not come with a mic- keeping the D-104 for my Collins stuff but it sure does sound good with and old unamplified D-104. Also has Instruction manual with schematic. $99 shipped anywhere in the Continental U.S.

Tnx,
Jim

From: Chris <ck5@ix.netcom.com>
Subject: Collins 212Z-1 Remote Amplifier for sale

I have in good condition a Collins 212Z-1 Remote Amplifier. This is a solid state, 4 Channel AC or Battery operated portable in a case used for on the spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent for AM Transmitters requiring line level audio input. Built in 400Hz tone for setups and program monitor for headphones. All XLR inputs and also telephone connections. With a really large VU Meter in the center makes it a great addition to any station. $395 each plus shipping.

Subject: Need Specs. on 1N830A Diode...

Hi ...

I have a 1967 vintage R.F. signal generator that I'm refurbishing and in the process of disassembly, I had the misfortune of breaking a diode - 1N830A - this is obviously an obsolete diode as I'm unable to find it listed in any current semiconductor cross reference. I can't even find it listed in the few vintage catalogs I have of that time period. This diode had a glass envelope like a signal diode and was used in the R.F. sense (microvolt meter) circuit. If someone has the specs on this diode, I'm sure I could find a modern substitute.

Thanks for the help

Brian - KB8IIC

I got 2 hits at metacrawler.com. One for Dial Electronics and another a cross reference to ECG5210A. Dial might be helpful.

My Motorola manual only lists it as a silicon UHF Detector diode.

I have an idea. Dig up an old UHF tv tuner (you know the ones with a three gang variable cap in a two by nothing box that sat next to a VHF switch type tuner) and pull out the mixer diode. It won't be an exact match, but it might get you going until and exact sub comes along.

Subject: Need Specs on 1N830A Diode...

Hi,

I'm in the process of refurbishing a 1967 vintage R.F. signal generator and had the misfortune of breaking a diode - 1N830A - during disassembly - This diode is in the R.F. detector (microvolt meter circuit) and appears to have been some sort of signal type diode with a glass envelope. I assume this diode has long been discontinued as I can't find it listed in any current cross reference. Even my limited catalogs of that time period don't list it. If someone knows the specs, I'm sure I could find a modern substitute. Any help is appreciated.

Thanks,
Brian - KB8IIC

From: "W9STB" <telegrapher@hotmail.com>
Subject: Ranger/Valiant Frequency Shift Problem

FYI to all the interested Ranger/Valiant owners who are reading this posting...

I received a nice email from Joe Tyburczy, W1GFH/6.
In it, he says:

"My Ranger experiences the same problem when not properly warmed up. Wiggle the 6AU6 in the VFO compartment. Check and replace the tube if

needed. Check the screen resistor (R1-100K) for continuity. Check the hardware on the variable cap. Tighten all mechanical hardware."

Thanks Joe.

In on the air QSOs on 80M CW, both K9KEU and K8TFC/9 indicate that the problem is worse on 40 than on 80 meters.

In late sixties I owned both a Ranger I and a Ranger II; setting side by side on the desk. I do not recall ever having this problem on either. As such, I am wondering, has anyone else noticed the shift as being worse on the Ranger I than the Ranger II or vice versa?

Thanks for your input.

Subject: Ranger/Valiant Frequency Shift Problem

hmmm. My JV Navigator does that too... always thought it was a VR tube problem or the band switch. Check both. Nothing wrong.

Have learned to live with it. Some of my pals on 40 know when I'm using the Navigator. At 20 watts output, I'm not going to worry about it.

Only problem are those darn OO QSL cards I get in the mail. Usually the OO checks the drifting/chirp box and writes something about the FCC requiring engineering state of the art.

I write back and say it was state of the art -

FS: mil surplus modulator unit from APS-104 search radar (likely from B-52 bomber - 1960s vintage). Was used to fire a large pulse magnetron (in another unit). Contains a 4C35 thyratron, four 3B29 HV rectifiers and a few smaller tubes, oil caps, relays, transformers and other parts all in airtight aluminum canister. Also have copy of service manual (extra $5 for all, n/c for just the basic schematic & info). Still in original box, but used, collector's item, $55 (prefer pick up - box exceeds UPS size limit).(For an additional $20, I can shave down the foam insert and modify the box for UPS shipping, just takes a lot of time & effort to do this, and will cost at least another $40 to $60 to ship 105 lbs.) Located in southeast Alabama, 36330 zip. Email or call 334-347-5281 day/eve/wknd.

I'm looking for a Heathkit SB-401 dial, or SB-401/400 junker with good dial.
The dial was probably the same one used in the entire SB model line?

Message-ID: <fwsf5.2111$fd7.476264@dfiatx1-snr1.gtei.net>
Source record: 63626

SOOooo - by YOUR logic, is someone GIVES *me* a new Cadillac, that gives me grounds to ridicule someone who is trying to SELL a new one for 5 grand - because *I* got mine so cheap?

Whenever YOU feel compelled to dump your Collins stuff cheaply because YOU paid so little for it, look me up... Until THEN, your comparisons are irrelevant...

Well, let's see...
I bought my 32S-1 with power supply/speaker for 150 dollars.
I bought my 75S-1 for 200 dollars.
I bought my station console for 100 dollars.
I got my 30L-1 for free because it didn't work but works now.
So I got my complete Collins station for only 450 dollars.
And every piece is a 8 or better.
Hmmm, maybe I should ask 2000 dollars for mine!
Naaa, I can't rip people off like that.

Subject: COLLINS FILTER ID?

Group,

I have a unused Collins Mechanical filter and need some help with finding it's properties, (what freq, use, etc.). The model number is "F 455 Y 21 6827" . Other number is 526 9337 00. Can anybody tell me how to read the numbers? I think F 455=freq 455kc but I don't have a clue to the rest.

Also I have a large cylindrical one with a concentric mounting flange. Prox 1/2" dia. and 2-3" long. No numbers at all. I have no equiptment to find what these are.

Thank you for any help or resources where I can find this info.

From: kj4dx@my-deja.com
Subject: Hallicrafters PM-12 Speaker

I've recently acquired an original PM12-S
Hallicrafters speaker. The thing is in very,
very nice shape. It was "thrown in" with a radio
purchased from an antique dealer -- the guy sort
of said, "oh, here's an old speaker so you can
hear some sound out of that radio....". Once I
got the dust off of it I found that there wasn't
even a scratch to be found. But I'm still not
100% convinced that it's all there. For that
reason, I've got two questions for anyone who
knows:

1) Does anyone know if there was any
Hallicrafters logo on the front of the PM12 "S"
cabinet? There is one clearly on the speaker
magnet, but I would suspect that there might have
been a small metal "hallicrafters" emblem on the
front of the cabinet, too. If there was one on
the original, does anyone know a manufacturer
that makes reproduction emblems by special order?

2) What would the original connection wire have
looked like? Brown fabric-covered ? Two-wire
"lamp-cord", or shielded cable? I suspect it's
NOT the red and black shiny vinyl speaker wire
that is currently attached to the speaker ... :)

From: "D. S. Platt" <jeepp@erols.com>
Subject: Mic for boatanchor?

And decent medium to Hi-Z mic will work (5K and up). This radio came out before
all the 500 ohm input audio rigs did. Heck, a D-104 will work great!! The pins
are for mic hot (high) and PTT. If you don't have a book, just set it up
properly and ground each pin one at a time. In the SSB or AM mode, the PTT pin

will key the rig when you short it to gnd.

Hi Skip
You can use Radio Shack part number 32-1031B. It works fine.

Any of the small, mobile/tactical military speakers, LS-xxx , have a small
8-to-600 ohm xformer in them. Find a junker and take out the xformer or get a
nice one and use it directly. One can also use a small 6.3 volt filamant
transformer. In the "old" days, that's what a lot of us used. (not that
old..... novice in '59)

The Hallicrafters Collectors Association maintains a terrific website
at www.hallicrafters.org.
Sadly we are at risk of losing this website by September unless they
are able to raise $400 by then.
If you have enjoyed this excellent website and all it offers, please
send whatever size donation you can to:

Hallicrafters Collectors Association
c/o Brad Stone
7382 W. 500 S.
Morgantown, IN 46160

In addition to my personal donation, I plan to auction some of my
Hallicrafters equipments off on eBay with proceeds going to HCA. Please look
for "HCA Hallicrafters ____" in the key words of the eBay search engine. If
you have extra stuff or duplicates lying around, help in this manner will
insure that we do not lose www.hallicrafters.org.

Thanks.

Vern Weiss, W9STB

From: dslosty@pipeline.com
Message-ID: <397f3197.704676@news.pipeline.com>
Source record: 63642

Fore sale, an Atlas 350XL transceiver in very good to excellent
condition. Cosmetically it's around a 9 out of 10. The only
imperfections are some small scuff marks on the front panel trim ring.
Front panel is perfect and the case is almost perfect.
I've gone thru the rig and have done some minor repairs and
an alignment.

It has the digital readout, CW filter, full QSK, 350 watts PEP input
power with a maximum of 160 - 200 watts output. Requires a 35 amp
12 volts supply since maximum key down current is 32 amps.
A suppl;y is not included. It comes with a W7FG manual copy.
$350 plus shipping.

73,
Doug/WA1TUT

From: Chris
Subject: Collins 212Z-1 Remote Amplifier for sale $375

I have in good condition a Collins 212Z-1 Remote Amplifier. This is a
solid state, 4 Channel AC or Battery operated portable in a case used
for on the spot broadcasts. Freq response 50-15KHz gain 90dB. These
are excellent for AM Transmitters requiring line level audio input.
Built in 400Hz tone for setups and program monitor for headphones. All
XLR inputs and also telephone connections. With a really large VU Meter
in the center makes it a great addition to any station. $375 plus
shipping.

Subject: FL2100B Yaesu

I have FL2100B with Measures mods installed plus RF parts bias correction mod installed. Unit works well 600-700 watts out. Condx is 8.5 to 9. The plate meter cover has a crack in it. (came that way and Im trying to find a replacement-maybe we'll get lucky). New power supply diodes were just installed too. Basically, we've just gone through this amp Have original owners manual too. . $350 plus shipping Thanks and 73s Lew-KlNDV

Subject: FS: ATLAS 350XL transceiver

Fore sale, an Atlas 350XL transceiver in very good to excellent condition. Cosmetically it's around a 9 out of 10. The only imperfections are some small scuff marks on the front panel trim ring. Front panel is perfect and the case is almost perfect. I've gone thru the rig and have done some minor repairs and an alignment.

It has the digital readout, CW filter, full QSK, 350 watts PEP input
power with a maximum of 160 - 200 watts output. Requires a 35 amp
12 volts supply since maximum key down current is 32 amps.
A suppl;y is not included. It comes with a W7FG manual copy.
$350 plus shipping.

73,
Doug/WA1TUT

Subject: SOS DE www.hallicrafters.org

The Hallicrafters Collectors Association maintains a terrific website
at www.hallicrafters.org.
Sadly we are at risk of losing this website by September unless they
are able to raise $400 by then.
If you have enjoyed this excellent website and all it offers, please
send whatever size donation you can to:

Hallicrafters Collectors Association
c/o Brad Stone
7382 W. 500 S.
Morgantown, IN 46160

In addition to my personal donation, I plan to auction some of my
Hallicrafters equipments off on eBay with proceeds going to HCA. Please look
for "HCA Hallicrafters ____" in the key words of the eBay search engine. If
you have extra stuff or duplicates lying around, help in this manner will
insure that we do not lose www.hallicrafters.org.

Thanks.

FYI IIRC this rig was sold in UK as a Summercamp 2020 (however its
spelt) by Lowe Electronics, Matlock, Derdyshire. Internally it was a
Yeasu with bells and whistles added.
Nice Rig, I had one for a while.

Hi Mike and group,
Interesting to hear that it was sold by Lowe under a different name,
I don't know if Yeasu had anything to do with it but here it was sold
mostly through Henry Radio and made by Uniden. It carried the name
Tempo Via Henry just as the Tempo One did which was really a Yaesu
FT-200 under the Tempo sticker. However the 2020 was a completely
different radio. In that era it seems to me that the front panel
layouts between Kenwood and Yaesu were very similar. If the marketing
worked, why not? Icom and Drake where very different.

I need help in determining the value of a Collins Model MM-1 Hi impedance hand Mic. It has the appearance of either stainless steel or brushed aluminum with a black bakelite PTT "button" in the upper left. The mic hanger is mounted in front, centered in the mic cutout. It is too heavy to be aluminum construction, unless weighted on the inside. It is held together by 2 phillips screws on the back, and has a spring-type coiled strain relief where the coiled cord exits the mic at the bottom.

TIA,

David

From: speedskater1@my-deja.com
Subject: Collector sells his only S-27 on ebay

The ad reads as follows: I have been collecting communications receivers for a very long time and have yet to find a Hallicrafters S-27...until now... It came out of a silent keys hamshack over the weekend from Phil Pa. I have not fired it up but appears to be in electronically working condition. I will of course stand behind it if anything serious is wrong. I hope it will find a good home in a hallicrafters collection. The number is 389918571.

It does appear to be complete in the photos. Why would a collector who has only seen one of an item buy it and then immediately sell it? To me, this sounds strange. A collector would normally keep something that is so rare and he only has one, the only one he has ever seen. I am curious to know if there is more to this than meets the eye.

Subject: Collector sells his only S-27 on ebay

My humble opinion...for what it's worth if you don't mind. Yup, the wording does seem kind of questionable. First, making money legally is a great thing. Even more great, is the ability to say no. There is a lot of stir about eBay. What bothers me is that I feel that I have done well there. I have purchased many items that I felt like were the best deal that I could find...granted, most were not boat anchors. However, my latest acquisition was a T-4XC for just over $200...not too bad. Last year, a late KWM-2A (36xxx) for just over $700...working FB! The worst theives, roughs, liers and con artists are in Washington. I hope and pray that we (including myself) use all that energy to get the

working mans taxes reduced...because we are not allowed to say no to
them! 73, JP

Subject: TEMPO 2020 HF Transceiver $225

Hi Mike and group,
Interesting to hear that it was sold by Lowe under a different name,
I don't know if Yeasu had anything to do with it but here it was sold
mostly through Henry Radio and made by Uniden. It carried the name
Tempo Via Henry just as the Tempo One did which was really a Yaesu
FT-200 under the Tempo sticker. However the 2020 was a completely
different radio. In that era it seems to me that the front panel
layouts between Kenwood and Yaesu were very similar. If the marketing
worked, why not? Icom and Drake where very different.

There is a photo of that speaker in the Hallicrafters collector guide. The photo's kinda dark, but there appears to be no emblem.

2376. FS or FS+ trade QRO HF-2500 Amplifier

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-28 00:00:00 UTC
From: Larry Anderson <w6lar@cybertime.net>
Message-ID: <3981B2E7.B85C5525@cybertime.net>
Source record: 63452

Original owner. QRO HF-2500DX QSK amp with less than 50 hour op time.
New $2895, sell for $2200 or trade for Heath SB-220 and $1500 cash.
SB-220 must be in very good condition both operational and cosmetically.

The QRO is grid driven and takes very little drive for full output. 50W
input on 75M will drive to 1500W out. 15W on 10M will drive to 1500W
out. This amp will do over 2500W into dummy load so its not working very

hard when run at legal levels. If interested call or e-mail.
909/797-6867 w6lar@cybertime.net

2383. FS: ARC Corp R-19 VHF Command Set

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-28 00:00:00 UTC
From: Bob <bmiller@calweb.com>
Message-ID: <39820482_2@news3.calweb.com>
Source record: 63459

For Sale: Aircraft Radio Corp. R-19 VHF AM receiver approximately 120 Mhz to 148 Mhz AM. In a command set form factor, but no dial on the front. Complete with all covers, no dents or cruds, or modifications of any kind. All tubes and DY-86 Dynamotor (28Volt Commmand receiver style). Includes Full Sized schematic print set. Built like a Rolex Watch, but definately a dated design. Gray Wrinkle Finish. I have a few of these with dynamotors and a another batch W/O dynamotors. $45 with dynamotor plus UPS on 15 lbs from zip 95827. $35 less dynamotor plus UPS on 12 lbs from zip 95827. These are complete as noted, but no warranty as to operation is conveyed due to age. A great addition to any command set collection.

tnx for the read.

Bob, KE6F

2384. CLEANING old gear safely?

Newsgroup: rec.radio.amateur.boatanchors

Group,

Thanks for reading.

I have a bunch of vintage tube gear to clean. Both exposed control panels and chassis decks, (with silk screen lettering). Good shape, just cigarette tar and dust. What is good for that? Ammonia too harsh?

Then I have some real oxidized rig decks including some rust. Anything for that? What chemicals should I stay away from. This is valuable working equipment.

Thanks for any advice or leads to resources.

At the very least, it appears to be a deceptive ad from the
perspective of the seller's story.

If he/she is a Hallicrafter's collector and it was truly as rare as
claimed, they'd keep it. If money was an issue, they'd sell items
from their collection which were more readily replaceable in the
future.

"I have not fired it up but appears to be in electronically working
condition"

Horse puckey! How can he comment on it's working condition without
applying power?

Also, I don't know anyone in radios that would describe something as
"electronically" working.

My humble opinion...for what it's worth if you don't mind. Yup, the wording does seem kind of questionable. First, making money legally is a great thing. Even more great, is the ability to say no. There is a lot of stir about eBay. What bothers me is that I feel that I have done well there. I have purchased many items that I felt like were the best deal that I could find...granted, most were not boat anchors. However, my latest acquisition was a T-4XC for just over $200...not too bad. Last year, a late KWM-2A (36xxx) for just over $700...working FB! The worst theives, roughs, liers and con artists are in Washington. I hope and pray that we (including myself) use all that energy to get the working mans taxes reduced...because we are not allowed to say no to them! 73, JP

Source record: 63541

I ignore the terms

RARE
COLLECTORS GRADE
HARD TO FIND
ONE OF A KIND

or something similar.

I decide what I need or want to buy. Research what it is worth and what it is selling for. I set my maxinum price, if it exceeds my maxinum price, I don't bid. If it does not exceed my maxinum price, I will bid on it and see if I win.

Gotton some fair deal, nothing great. I perfer off the news groups. Sold a few items on the news groups also but I sold some old Heathkit manuals on E-Bay because I thought there was a larger audance that might be looking for them. I was sure someone who needed or wanted them would buy them verses throwing them in the trash.

Subject: FORGET PAYPAL reimbursement in fraud cases

Their website says that they get paid from people who leave a balence sitting
in PayPal, and they collect interest off this balence. As far as I know
neither buyer or seller pays a fee. I've used it a few times and it seems to
work as advertised. When you withdraw your money by electronic transfer to
your bank account it still takes about 3 days, this time they must collect
interest on. With enough users a rolling balence would be maintained to
collect interest on or invest. They really do give you $5 just to open an

account.

I can hear the comments, no I don't work for PayPal!

From: Jim Bo <jbollit@ix.netcom.com>
Subject: IF Transformer National HRO-500 Help

Hello,

I have a National HRO-500 receiver that has a defective BFO coil.

The reference designator is L-24. It is a 1 milli-henry adjustable coil with a low impedance tap.

On a long shot, does any one have one that they can part with?

The manufacturer's part number is 273F6523. Does anyone recognize this part number scheme that could identify the original manufacturer of this coil?

The size of the "I.F." metal can that houses the coil is 3/4" x 3/4" x 2.0" and has a slug to adjust the inductance.

Does anyone have the winding info (number of turns) on this coil, especially where the low impedance tap should be on the winding? Worst case I could wind my own if I had the # of turns for the low impedance tap.

Any and all help greatly appreciated, I want to get this radio back into service.

Jim

You are welcome to download the Viking II manual from the BoatAnchor
Manual Archive. BAMA is a cooperative project making manuals
available on the internet without cost. Several hundred manuals are
currently available and new ones are being added regularly. Uploads
of manuals currently missing from the collection are, of course,
encouraged and greatly appreciated.

From: DUNCAN WALTERS <tesla@cwcom.net>
Subject: WTD:I.F.Transformers

Has anyone any of the old I.F.Transformers
which used to be used in valve radio circuits?
I am looking for a pair (at least) of 465KHz
or1.6MHz ones..

The type I am after are housed in aluminium cans
approximately 7/8 inch (22mm) square by approx
2 inches (50mm) high.
Chassis fixing is by two 6BA screws.
If anyone can help, I would be very grateful.
Willing to pay for some in good condition.
Please reply soon.
Best wishes,
Duncan G4DFV

No reserve and starting at $135.00 plus I have to charge $15.00 plus shipping. I buy military re-useable containers and this is what they cost me. You don't have to sweat wondering if that great radio you just bought is going to arrive in pieces. This is a container the Air Force uses to ship high dollar avionics in. Sorry I don't sell them as they give me peace of mind when I ship a great radio to your door and need not worry if UPS will pay out a claim. They will if they damage the radio in this container (no excuses) Thanks for looking and any questions I will try to answer quickly. This radio is all set and aligned and I will include a copy of the manual so you can keep it in good running order too!

BC-733, localizer receiver, 108.3 - 110.3 MHz, it has audio filters to separate the localizer tones, 6.9 MHz IF. I have the schematic, but no scanner, it would have to be mailed.

I have an old Heathkit HM-11 swr meter for sale.

Two-tone green front panel and meter are in excellent condition. The dark green chassis box has peeling paint and scratches. (should be re-painted) I have used this meter for many years with the only problem being dirty switch contacts.

Will take $15.00/shipped

USA sale only. Certified check/money order. I will ship via USPS/ Priority/Insured.

Please e-mail me directly.

Thanks!

I am in need of 2 transmitting caps ?820pf at 8KV, 11A @ 1000 Kcs. I can use either the clyinderical Sangamo type G-2, or the Aerovox or Sprague caramel colored square ones. I am trying to put an old Gates broadcast transmitter on 75 meters and these caps are needed to resonate the tank. As an alternative, I could also use 2 1500pf caps to series up with the 2000pf caps that are already there. Size is not a constraint.

Thanks for reading.

Bob Maser W6TR Riverside, CA

Thanks for reading this and good luck bidding!

2419. Boatanchor Parts and Tubes for Sale - 7/28/00 list

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-29 00:00:00 UTC
From: n2ey@aol.com
Message-ID: <20000728220916.02762.00004332@nso-ck.aol.com>
Source record: 63471

I have the following parts for sale. Too much stuff, not enough basement. Shipping (from 19087) is not included. Prices shown are asking prices for single units - let's make a deal! Big discounts on quantity purchases. Shipping weights are estimates - you pay only actual shipping charges.

Modulation Transformer

Thordarson 7994 plate-and-screen modulation transformer. This is an upright transformer of the pre-WW2 Thordarson style. Looks like it could easily handle 50 watts of audio. I have NO information on this transformer - any and all help appreciated! In fair-to-good condition. Asking $5 (8 lbs.)

Power Transformers (all have 117 V 50-60 Hz primary)

UTC H-196 power transformer. Upright, hermetically sealed mounting style with ceramic insulated lugs on the bottom for connections. Meets MIL-T-27A. This transformer has two ratings. Military Rating: HV: 230/285VCT @ 445/380 mA HV, 6.3V @ 5 A heater #1, 6.3 V @ 1.5 A heater #2. Industrial rating: HV: 230/285VCT @ 480/420 mA HV, 6.3V @ 6 A heater #1, 6.3 V @ 2 A heater #2. NOS, in the original box, absolutely MINT condition, a beautiful mil-spec unit. Will test if desired. Price $25 (12 lbs.)

Stancor PC-8417 power transformers (Have 2). Upright mounting style (no big chassis hole to cut). Secondaries: 440 VCT @ 50 mA HV, 25.2 V @ 0.5 A heater #1, 6.3 V @ 0.6 A heater #2. Mounting centers 2 X 1-9/16 inches. NOS, in the original boxes, absolutely MINT condition. Will test if desired. What makes these transformers special is that they are just right for building a power supply for an unmodified "Command set" (ARC-5/SCR-274N) receiver. Heater winding #1 is just right for the heaters of an unmodified Command set receiver, and heater winding #2 is just right for a 6X5 or 6X4 rectifier. Using one of those rectifier tubes and a capacitor input filter, the DC output voltage should be about 220 volts at 50 mA. Of course they can be used for other purposes, but the ratings are a perfect match for a Command set receiver. Price $12 each or both for $20. (4 lbs. each) Will include 6X4 or 6X5 rectifier tube and socket (your choice, no charge) if you need them..

UTC R-7 power transformer. Horizontal, "hole in the chassis" style with terminals. Secondaries: 700 VCT @ 100 mA(?) HV (current rating not marked, but at least 90 mA), 5 V @ 3 A rectifier filament, 2.5 V @ 8 A heater #1, 6.3/2.5 VCT @ 2A heater #2 (tapped so both voltages can be used). Used, dusty and a paint is scratched up, fair-to-good condition. Tested, works. Price $4 (5 lbs.)

Filament Transformers (all have 117 V 50-60 Hz primary)

Thordarson 6421 rectifier filament transformer. Antique upright style (from 1930s) with solder lugs for connection. Two independent secondaries: 5 V@ 3 A, 2.5 V @ 10.5 A. Used, tested, works, good condition. Price $3 (4 lbs.)

Variable Transformers

Superior Electric "Powerstat" variable autotransformer (similar to a Variac). Model 116-U. Input is 115V, output can be connected for 0-115V or 0-135V, continuously variable. Rated 7.5 A output. Open type, panel mounting with 3/8" shaft, no scale provided. Can be connected for CW or CCW rotation, instructions on terminal board cover. Used, tested, works, good condition. Price $25 (10 lbs.)

Meters

Meter from military I-166 multimeter. Round black bakelite case, white face with scales. 0-100 uA movement. Labeled "calibrated for use in steel panels". Price $5 (1 lb)

Tubes

NOS tubes in original boxes. All are $2 each or 6 for $10. Manufacturer in parenthesis, Quantity in brackets:

6AG7 (RCA) [3] (In special military long-term packing)
6AU5GT (Sylvania) [5]
6BL7GTA (GE) [1]
6SA7GT (RCA) [1] (in plain military box)
6SQ7GT (Raytheon) [6]
6V6Y (RCA) [1] (Metal tube with low-loss micanol base for RF use)
6080 (RCA) [1]

Miscellaneous

Snap Switch - A real antique, surface mount switch meant for house lighting but perfect for antique-style power supply on wooden chassis. Rated 10 A @ 250 V. Round white ceramic base with snap-on brown bakelite cover. Screw terminals inside, wiring is done via holes in the base. 2-1/2" round, DPST with double-break contacts. NOS, excellent condition. Price $2 (1 lb).

Octal Wafer Sockets - Brown phenolic. Have 9 NOS, VGC, 1-5/16 mounting centers, 25 cents each. Also 3 used, GC, 1-1/2" mouning centers, one with pin 6 missing, 10 cents each or free with any order. $2 for all 12. (1 lb.)

160 Meter Wave Trap - J.W.Miller Type 811-A. This is a parallel tuned circuit consisting of a pi-wound inductor that is mounted on a mica compression trimmer. Put in antenna lead of AM radio to eliminate BCI from nearby ham stations. NOS in original box. 25 cents (1 lb)

Sonalerts - Model SC 628 Sonalert device by P.R. Mallory. Require 6 to 28 VDC @ 3 to 14 mA. Produce 2500 Hz tone at 68-80 dB SPL. Unused, tested, working, very good condition. Have 3. Price $1 each (1 lb)

Control Box for Alliance Tenna-Rotor. Classic unit from early '50s - sloping front brown bakelite case with meter. Old, beat up, cracked and glued case, some parts missing - a real bottom-of-the-junkbox find. Transformer, meter and switch assembly good. Price 10 cents or free with any order. (2 lbs)

Code Practice Oscillator Module. CPO-4 made by Carl Conover & Co. Mineola, NY. Classic unit from the early '60s - "All American Made!" Consists of a small circuit board with two transistors, one resistor and one capacitor, to be hooked up to a soeaker, key and 1-1/2 volt battery. NOS, still in original plastic bag. Looks like something you'd find at Lafayette Radio in 1962. Price 10 cents or free with any order. (1 lb)

Please feel free to email with any questions, and to make an offer for some or all of this stuff. More to come, too.

7/28/00

for all the semiconductors and diodes on your list go to:
http://www.xs4all.nl/~barendh/Indexeng.htm
a really excellent site for RF devices.

For Valves try
http://www.colomor.demon.co.uk
they appear to have most of the valves you want

or email to
wilsonvalves@surflink.co.uk
not sure of their stock though

From: john williams
Subject: CLEANING old gear safely?

Group,

Thanks for reading.

I have a bunch of vintage tube gear to clean. Both exposed control
panels and chassis decks, (with silk screen lettering). Good shape, just
cigarette tar and dust. What is good for that? Ammonia too harsh?

Then I have some real oxidized rig decks including some rust. Anything
for that? What chemicals should I stay away from. This is valuable
working equipment.

Thanks for any advice or leads to resources.

Subject: Collector sells his only S-27 on ebay

I ignore the terms

RARE
COLLECTORS GRADE
HARD TO FIND
ONE OF A KIND

or something similar.

I decide what I need or want to buy. Research what it is worth and what it is selling for. I set my maxinum price, if it exceeds my maxinum price, I don't bid. If it does not exceed my maxinum price, I will bid on it and see if I win.

Gotton some fair deal, nothing great. I perfer off the news groups. Sold a few items on the news groups also but I sold some old Heathkit manuals on E-Bay because I thought there was a larger audance that might be looking for them. I was sure someone who needed or wanted them would buy them verses throwing them in the trash.

Subject: Collector sells his only S-27 on ebay

At the very least, it appears to be a deceptive ad from the
perspective of the seller's story.

If he/she is a Hallicrafter's collector and it was truly as rare as
claimed, they'd keep it. If money was an issue, they'd sell items
from their collection which were more readily replaceable in the
future.

"I have not fired it up but appears to be in electronically working
condition"

Horse puckey! How can he comment on it's working condition without
applying power?

Also, I don't know anyone in radios that would describe something as
"electronically" working.

counts on quantity purchases. Shipping
weights are estimates - you pay only actual shipping charges.

Modulation Transformer

Thordarson 7994 plate-and-screen modulation transformer. This is an upright transformer of the pre-WW2 Thordarson style. Looks like it could easily handle 50 watts of audio. I have NO information on this transformer - any and all help appreciated! In fair-to-good condition. Asking $5 (8 lbs.)

Power Transformers (all have 117 V 50-60 Hz primary)

UTC H-196 power transformer. Upright, hermetically sealed mounting style with ceramic insulated lugs on the bottom for connections. Meets MIL-T-27A. This transformer has two ratings. Military Rating: HV: 230/285VCT @ 445/380 mA HV, 6.3V @ 5 A heater #1, 6.3 V @ 1.5 A heater #2. Industrial rating: HV: 230/285VCT @ 480/420 mA HV, 6.3V @ 6 A heater #1, 6.3 V @ 2 A heater #2. NOS, in the original box, absolutely MINT condition, a beautiful mil-spec unit. Will test if desired. Price $25 (12 lbs.)

Stancor PC-8417 power transformers (Have 2). Upright mounting style (no big chassis hole to cut). Secondaries: 440 VCT @ 50 mA HV, 25.2 V @ 0.5 A heater #1, 6.3 V @ 0.6 A heater #2. Mounting centers 2 X 1-9/16 inches. NOS, in the original boxes, absolutely MINT condition. Will test if desired. What makes these transformers special is that they are just right for building a power supply for an unmodified "Command set" (ARC-5/SCR-274N) receiver. Heater

winding #1 is just right for the heaters of an unmodified Command set receiver, and heater winding #2 is just right for a 6X5 or 6X4 rectifier. Using one of those rectifier tubes and a capacitor input filter, the DC output voltage should be about 220 volts at 50 mA. Of course they can be used for other purposes, but the ratings are a perfect match for a Command set receiver. Price $12 each or both for $20. (4 lbs. each) Will include 6X4 or 6X5 rectifier tube and socket (your choice, no charge) if you need them..

UTC R-7 power transformer. Horizontal, "hole in the chassis" style with terminals. Secondaries: 700 VCT @ 100 mA(?) HV (current rating not marked, but at least 90 mA), 5 V @ 3 A rectifier filament, 2.5 V @ 8 A heater #1, 6.3/2.5 VCT @ 2A heater #2 (tapped so both voltages can be used). Used, dusty and a paint is scratched up, fair-to-good condition. Tested, works. Price $4 (5 lbs.)

Filament Transformers (all have 117 V 50-60 Hz primary)

Thordarson 6421 rectifier filament transformer. Antique upright style (from 1930s) with solder lugs for connection. Two independent secondaries: 5 V@ 3 A, 2.5 V @ 10.5 A. Used, tested, works, good condition. Price $3 (4 lbs.)

Variable Transformers

Superior Electric "Powerstat" variable autotransformer (similar to a Variac). Model 116-U. Input is 115V, output can be connected for 0-115V or 0-135V, continuously variable. Rated 7.5 A output. Open type, panel mounting with 3/8" shaft, no scale provided. Can be connected for CW or CCW rotation, instructions on terminal board cover. Used, tested, works, good condition. Price $25 (10 lbs.)

Meters

Meter from military I-166 multimeter. Round black bakelite case, white face with scales. 0-100 uA movement. Labeled "calibrated for use in steel panels". Price $5 (1 lb)

Tubes

NOS tubes in original boxes. All are $2 each or 6 for $10. Manufacturer in parenthesis, Quantity in brackets:

6AG7 (RCA) [3] (In special military long-term packing)
6AU5GT (Sylvania) [5]
6BL7GTA (GE) [1]
6SA7GT (RCA) [1] (in plain military box)
6SQ7GT (Raytheon) [6]
6V6Y (RCA) [1] (Metal tube with low-loss micanol base for RF use)
6080 (RCA) [1]

Miscellaneous

Snap Switch - A real antique, surface mount switch meant for house lighting but perfect for antique-style power supply on wooden chassis. Rated 10 A @ 250 V. Round white ceramic base with snap-on brown bakelite cover. Screw terminals inside, wiring is done via holes in the base. 2-1/2" round, DPST with

double-break contacts. NOS, excellent condition. Price $2 (1 lb).

Octal Wafer Sockets - Brown phenolic. Have 9 NOS, VGC, 1-5/16 mounting centers, 25 cents each. Also 3 used, GC, 1-1/2" mouning centers, one with pin 6 missing, 10 cents each or free with any order. $2 for all 12. (1 lb.)

160 Meter Wave Trap - J.W.Miller Type 811-A. This is a parallel tuned circuit consisting of a pi-wound inductor that is mounted on a mica compression trimmer. Put in antenna lead of AM radio to eliminate BCI from nearby ham stations. NOS in original box. 25 cents (1 lb)

Sonalerts - Model SC 628 Sonalert device by P.R. Mallory. Require 6 to 28 VDC @ 3 to 14 mA. Produce 2500 Hz tone at 68-80 dB SPL. Unused, tested, working, very good condition. Have 3. Price $1 each (1 lb)

Control Box for Alliance Tenna-Rotor. Classic unit from early '50s - sloping front brown bakelite case with meter. Old, beat up, cracked and glued case, some parts missing - a real bottom-of-the-junkbox find. Transformer, meter and switch assembly good. Price 10 cents or free with any order. (2 lbs)

Code Practice Oscillator Module. CPO-4 made by Carl Conover & Co. Mineola, NY. Classic unit from the early '60s - "All American Made!" Consists of a small circuit board with two transistors, one resistor and one capacitor, to be hooked up to a soeaker, key and 1-1/2 volt battery. NOS, still in original plastic bag. Looks like something you'd find at Lafayette Radio in 1962. Price 10 cents or free with any order. (1 lb)

Please feel free to email with any questions, and to make an offer for some or all of this stuff. More to come, too.

From: Larry Anderson
Subject: FS or FS+ trade QRO HF-2500 Amplifier

Original owner. QRO HF-2500DX QSK amp with less than 50 hour op time.
New $2895, sell for $2200 or trade for Heath SB-220 and $1500 cash.
SB-220 must be in very good condition both operational and cosmetically.

The QRO is grid driven and takes very little drive for full output. 50W input on 75M will drive to 1500W out. 15W on 10M will drive to 1500W out. This amp will do over 2500W into dummy load so its not working very

hard when run at legal levels. If interested call or e-mail.

2438. For which Collins-radio is this transformer?

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-29 00:00:00 UTC
From: Sindre Torp <sindtorp@online.no>
Message-ID: <LpCg5.24221$MS3.402043@news1.online.no>
Source record: 63490

Hi,

Thanks for reading this!
I have large Collins power-transformer, but I don't know for which Collins radio it was made for.
This is what's printed on it:

COLLINS NO. 662-0434-00
FREED TRANSFORMER CO., INC.
BROOKLYN, N.Y., U.S.A.
FREED NO. 37724

Any help to determine which Collins model it was made for is appreciated.
The transformer is unused and has never been installed in any radio, and I will probably sell it.

Thanks and 73,
Sindre, LA6OP
sindtorp@online.no

BIGGEST THREAT to U.S. National parks?
Not pollution or environmental issues...
It's UN seizure, as allowed by our "political leaders",
already seen in Yellowstone Park and the Grand Canyon!
.....
American government - giving our country away, million
by million, and acre by acre - to many who are sworn enemies.

Well, let's see...
I bought my 32S-1 with power supply/speaker for 150 dollars.
I bought my 75S-1 for 200 dollars.
I bought my station console for 100 dollars.
I got my 30L-1 for free because it didn't work but works now.
So I got my complete Collins station for only 450 dollars.
And every piece is a 8 or better.
Hmmm, maybe I should ask 2000 dollars for mine!
Naaa, I can't rip people off like that.

From: Bruce E Stock
Subject: Identify This Transformer?

I have a good-sized power transformer dated 1953 on the bottom, but with
no other identifying marks. I suspect it was from one of the common
transmitters of that day, but I'd like to determine which one so I can
get an idea of what the current ratings of the windings are.

The secondaries of the transformer are:

900 VRMS Center-tapped
6.3 VRMS Center-tapped
5 VRMS
10 VRMS
230 VRMS

Any ideas on what rig this beastie might have come from?

>
>Jim
>*

I had to rewind one of the coils on my 500, and I carefully measured all the dimensions of the form, counted the windings, and so forth, and was quite successful at it. If I can do it, anyone can!

BTW, you might've heard that you can't use replacement transistors, the NTE types and so forth, in this radio. Not exactly true -- you can use 'em but buy three or four, you just have to find the one that works!

Also, alignment of the synthesizer IF is very critical, it has an effect on the alignment of the radio in general -- if you can't align at one end of a band or the other, that's most likely the cause.

Good Luck!

From: Steve Fried
Subject: Ranger/Valiant Frequency Shift Problem

Hi
This is a common problem with all of them. With or without the time sequence
keying mod.
I have never heard of anyone actually "curing" the problem. I don't notice it
in my Valiant. I do notice it in my Ranger.
Have a few friends who have the same problem. Doesn't seem to be particular to
any production run/mod, etc.
But it is there. I have just learned to live with it. Albeit, it is annoying.
Oh well.

I would think the problem would be sitting that close to an antenna
putting out that much power.

Any malfunctions can be corrected (computer reset) by disconnecting the battery for a few minutes. Also if you go out of your way to isolate your wires/cable with rf shield sold at any good shop, you'll minimize any potential problems. (I have a 99 Toyota prerunner)..... FYI

Anyone have a copy of the owners manual for a Realistic DX-150 receiver.
I would at least like a copy of the schematic.

Thanks, Gary

Sam:
U.S. Navy ships hardly ever operate in a mode you could listen to. Almost everything is encrypted, whether voice or data. There are a couple of exceptions. They monitor and use the international VHF FM frequencies also used by pleasure, fishing, and merchant ships, especially Ch 16 (156.8MHz). You can listen on that frequency, and others, like Ch 13. These channels are used to communicate with other vessels while underway.
Some large U.S. Navy ships have amateur installations. I don't know of any easy way to point you to them.

That's nothing compared to the exposure using a 2 meter or 440 H T on 5W
right next to the side of your face.

2454. Toothed Drive belt source??

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-30 00:00:00 UTC
From: Alan Melia <Alan.Melia@btinternet.com>
Message-ID: <8m29nq$j2g$2@uranium.btinternet.com>
Source record: 63306

Hi I have a Wayne Kerr Source& Dectector (model SR268) unit for use with RF bridges. It has a strange toothed belt to drive the rotary switches that indicate the tuning and range. The belts are flat and moulded in green fabric reinforced plastic. There is a flexible spine about 1/8th inch wide with small cylindrical teeth protruding sideways, which engage with the toothed drive wheels. The wheels have a smooth centre region between the the two rows of teeth. Both my belts have perished and fallen apart. I am sure these are not an in-house component, and they must have been used in other equipment for indexed slip-proof drives.
Do you know who might have made them or whether anybody stocks these things still??

The lady at WK was very nice but she could not even find their own information on procurement of these items (the unit is no longer made or supported).

Cheers and thanks for your interest
Alan

Source record: 63310

Carrier Battle groups can often be monitored on HF as they coordinate tracking of air and surface targets. Trouble is the frequencies tend to be a bit unpredictable. The mode is SSB and most of the conversation is in the clear with some classified data using "NUCO" in the format "NUCO - then the coded data - UN NUCO". With diligent listening you can often determine which carrier group it is. For example the George Washington battle group communications will once in a while have someone mention "the GW". These nets are characterised by somewhere around 6 to 20 members using single and double letter callsigns. You just have to keep looking. Anytime a major USN or NATO excercise is taking place you are likely to find them somewhere on HF. You will hear references to "alligator" (their HF data link system) and sometimes a callsign of "MAGIC" will be used by NATO AWACS aircraft operating with the battle group.

If you do find them they will frequently stay on the same frequency for several days so they can be monitored for long periods as they exhange data on targets and attempt to classify them as friendly, neutral or hostile. When they are busy they are really busy, but when things quieten down they tend to be more relaxed and even engage in the odd bit of gossip.

If you are interested in getting a 'heads up' on such nets, or other military communications I suggest you send a message to:

majordomo@qth.net
with "subscribe milcom" in the body of the message.

You will then be a member of the military communications mailing list and start to get regular - lots of them - messages relating to monitorin military communications.

What kind of lifespan do you expect the alternator to have? If you are still running the stock electrical system you are overstressing the alt/volt reg. Most stock electrical systems are in the 60-80 amp range, and you will be pulling that just with the amp and radio running. Leaving nothing to charge the battery, or power the ignition system and acc. You better think about buying a high capacity alterantor like welders or the guys with high power audio use. Get something that can put out 150-180 amps while running cool.

You may find your cw signal gets a cleaner tone with the voltage not dropping as you key. No more people hearing doweep doweep tones instead of dah dah.
thanks, John.

Jerry, your mistaken, I typically give advice Yes, Because I don't try and fight with them and whine about the illegal use of the amplifiers (LIKE YOU DO) doesn't mean anything, you go into a newsgroup and attempt to act like GOD!! you try to stir up problems, AS YOUR TRYING HERE! Your the first one to CRY CBER!! you make every attempt to belittle EVERYONE YOU CAN! I remember The dispute a while back!! My point WAS that being a decent person and NOT trying to Tell every person who runs an Amplifier on 11 meters what they already know, (that it is illegal) and imposing an ATTITUDE like you have. Gets absolutely NOWHERE! I Attempt to help them yes, I also make an attempt to get them to go forward with there hobby! Perhaps to even someday use there 11 meter equipment in a proper and legal manner as HAM! You Sir (term used loosely) just enjoy arguing and causing discontent! They have a term for persons like yourself it is "TROLL" If i were attempting to hide my identity I would post via dejanews with some un-known handle! What you fail to understand is with or without any advice i may attempt to dispense, the amplifiers will be run on 11 meters! If I make an attempt to at least have it run in a correct manner, and try to entice someone into becoming a Ham operator in the process, I think in the long run it is beneficial! Not everyone who runs a CB is a terrible person, just as not all Hams are great persons! Most of the Hams I know locally all started there radio hobby as CBers on SSB, I enjoy my hobby FULLY, and choose to talk to folks on 11meters as well as HF, this does not make me a terrible Amatuer! I earned my Extra class Ticket! I took the time needed to learn code and passed the 20 WPM exam, most of my life has been dedicated to radio communications! Because I choose to be friendly to folks on 11 meters it DOESN'T make me BAD! You seem to pop out of the woodwork every chance you get to BADMOUTH or BELITTLE folks! It really doesn't matter, I've made an attempt to find some parts for a leaning project, myself, a fellow HAM, and a CBer are all getting together and building this amplifier! Guess what we are ALL great friends! The CBer included, I met this fellow locally, and YES, I gave him advice on his ILLEGAL CB AMP! he will be taking the plunge and testing in two weeks!! So what is wrong with FRIENDLY HELP??? Should I choose to do as you do?? should I belittle my fellow radio hobbyist? If I had chosen to Lecture my local CBer on the legal issues of his amplifier he would still be tearing up the band and running it, regardless of what I said! He currently uses it very little, when he does use it he runs it CLEANLY with his mike gain set at a decent level! We have also become GOOD friends and look forward to talking on the HF bands! I'm hoping he will pass some of his knowledge onto his friends!!

One final point, I will build this amplifier, with, or without help from the good folks of the NG! What i don't find from my posting I will most likely find at the surplus dealers or Hamfests..... I'm sure some folks out here will flame me as you have attempted! However MR.Law, you may be

surprised that some folks may not take your side!

Now that you've "EXPOSED ME" Jerry, and attempted to belittle me, and
I've responded, I'm sure your pleased with yourself!

My apologies to the group for using bandwidth.....

That's not all that uncommon with old tube type rigs.

Tubes get gassy, or coupling caps start leaking, or any of another
problems.

Source record: 63430

I have for sale a Yaesu FL2100B linear amp. I would rate it an 8 in appearance. It just was gone through completely by a ham friend whos a certified tech. It has new power supply diodes, a good set of finals, bias mod fix, AG6K plate suppression mod, fans were cleaned and oiled, plus heavy duty fixed caps installed in place of the light ones where they switch them in on 75 mtrs. Have the original manual too. Front panel is in good shape but there is a crack in the meter cover face (might find a replacement.) The amp puts out a solid 600 w or better/ $350 or BO
Thanks-Lew

From: Chris <ck5@ix.netcom.com>
Subject: Collins 212Z-1 Remote Amplifier for sale

I have in good condition a Collins 212Z-1 Remote Amplifier. This is a solid state, 4 Channel AC or Battery operated portable in a case used for on the spot broadcasts. Freq response 50-15KHz gain 90dB. These are excellent for AM Transmitters requiring line level audio input. Built in 400Hz tone for setups and program monitor for headphones. All XLR inputs and also telephone connections. With a really large VU Meter in the center makes it a great addition to any station. $395 each plus shipping.

Subject: Need Specs. on 1N830A Diode...

Hi ...

I have a 1967 vintage R.F. signal generator that I'm refurbishing and in the process of disassembly, I had the misfortune of breaking a diode - 1N830A - this is obviously an obsolete diode as I'm unable to find it listed in any current semiconductor cross reference. I can't even find it listed in the few vintage catalogs I have of that time period. This diode had a glass envelope like a signal diode and was used in the R.F. sense (microvolt meter) circuit. If someone has the specs on this diode, I'm sure I could find a modern substitute.

Thanks for the help

My Motorola manual only lists it as a silicon UHF Detector diode.

I have an idea. Dig up an old UHF tv tuner (you know the ones with a three gang variable cap in a two by nothing box that sat next to a VHF switch type tuner) and pull out the mixer diode. It won't be an exact match, but it might get you going until and exact sub comes along.

From: kb8iic@aol.com (KB8IIC)
Subject: Need Specs on 1N830A Diode...

Hi,

I'm in the process of refurbishing a 1967 vintage R.F. signal generator and had the misfortune of breaking a diode - 1N830A - during disassembly - This diode is in the R.F. detector (microvolt meter circuit) and appears to have been some sort of signal type diode with a glass envelope. I assume this diode has long been discontinued as I can't find it listed in any current cross reference. Even my limited catalogs of that time period don't list it. If someone knows the specs, I'm sure I could find a modern substitute. Any help is appreciated.

Thanks,
Brian - KB8IIC

From: "W9STB" <telegrapher@hotmail.com>
Subject: Ranger/Valiant Frequency Shift Problem

FYI to all the interested Ranger/Valiant owners who are reading this posting...

I received a nice email from Joe Tyburczy, W1GFH/6.
In it, he says:

"My Ranger experiences the same problem when not properly warmed up. Wiggle the 6AU6 in the VFO compartment. Check and replace the tube if

needed. Check the screen resistor (R1-100K) for continuity. Check the hardware on the variable cap. Tighten all mechanical hardware."

Thanks Joe.

In on the air QSOs on 80M CW, both K9KEU and K8TFC/9 indicate that the problem is worse on 40 than on 80 meters.

In late sixties I owned both a Ranger I and a Ranger II; setting side by side on the desk. I do not recall ever having this problem on either. As such, I am wondering, has anyone else noticed the shift as being worse on the Ranger I than the Ranger II or vice versa?

Thanks for your input.

hmmm. My JV Navigator does that too... always thought it was a VR tube problem or the band switch. Check both. Nothing wrong.

Have learned to live with it. Some of my pals on 40 know when I'm using the Navigator. At 20 watts output, I'm not going to worry about it.

Only problem are those darn OO QSL cards I get in the mail. Usually the OO checks the drifting/chirp box and writes something about the FCC requiring engineering state of the art.

I write back and say it was state of the art -

Hi folks,

I have now listed all known Drake communications units and accessories on my WEB-site; at least all the units that I know.

Please observe that my WEB-site has got a new URL:
http://home.online.no/~sindtorp/

You'll find the Drake-models listed under "Drake equipment list". All kind of versions regarding color etc. are there; 338 items in total!
I have NOT listed Drake's assistive listening products and satellite TV products.
My "Drake-want-list" is also there; 19 items only.

I would be very thankful to receive e-mails if you know of any Drake-models that I have not listed.

I hope that you will find the list useful, and you are welcome to add my site to your links.

Thanks and 73,
Sindre, LA6OP

Hi, I am wanting a 2 meter ht or mobile radio, in GOOD condition. MUST
BE WORKING PLEASE! My budget is limited to
100.00 dollars only. If you have a WORKING ht or mobile and wish to
part with
it for this price or less, please e-mail me and let me know. Due to
recent illness I am short of cash (had back surgery and
now scheduled for knee replacement). PLease e-mail me with
any radio in WORKING CONDITION. I would like to have one that is
also able to recieve out of the 148mhz band as well. ie
wide recieve if that is possible! Mobile or ht would be fine, ANY
BRAND is also fine. Thanks..
you may email me or call my voice mail at: 1-877-815-9949 ANYTIME!!
EMAIL ME AT:
kf4plp@onebox.com
have a good day~!!
please e-mail me only..thank you !

Sent via Deja.com http://www.deja.com/
Before you buy.

2501. Re: Parts for 813 project amp

<<If anyone of you respondents has anything to offer regarding parts Etc... Email me, I will be happy to supply all your requested information, Includung my Extra class Call, I'm sure your referencing my My Email address and thinking, a "CBer" looking for amp parts.... Not the case..... I don't need to publicly validate my Amatuer status with a Call, However understandably will provide the requested information to anyone that has any surplus components to offer, via email....

Thanks>>

Just curious. What's the big deal about giving out your call along with your name in a ham newsgroup? It's not like there's any reason to hide it. Plus, you might scare up someone in your local area that has those 813 components :) 73 & GL, Joe, W1GFH

2502. FS: 40FT. Aluma Crank-up Tower

Dave:
I'm surprised, and stand corrected.
You can definitely predict that you will hear Navy ships on Ch 16 while at sea when encountering other vessels. They are funny; I've been at sea when they wouldn't give a callsign, though they insist upon knowing your name, callsign, flag, etc. They call themselves "U.S. Navy warship." Off Brazil 3 1/2 years ago a joint force of U.S., Canadian, Brazilian, plus one other NATO ship was patrolling. The interrogating ship (I was aboard a Liberian cargo ship) would not identify itself. We were close enough that I could read the callsign of the nearest one or two Canadian ships shown by the international signal flags painted on the bridge wings.
Tnx.

I suspect it has more to do with the fact that you are an extra class amateur who regularly dispenses advice in rec.radio.cb on methods of getting illegal linear amplifiers to perform better on 11 meters.

I'd hide my callsign and identity too.

A. Jarry

Its really no big deal folks, However recently I've been getting 10 to 15 articles of unsolicited Snail Mail daily, All bearing my Call, I CANNOT figure the source of this mail, My postings (once on this NG, more often on some others.) used to bear my Call Sign, My best guess was that these were being extracted from newsgroup postings and address was being extracted via call sign server. Hence my posting does not carry any Identifying information. I've already stated I will provide info via email, My apologies if my attempt to alleviate my "JUNK MAIL" problem has put anyone off or insulted anyone! It was not the intent. I don't believe anyone would be even close to being local, I'm VERY rural, and know most of the local hams.. >>

Well I for one think it is just common courtesy to send along one's name in any email and if looking for stuff their address as well. I asked for the same reason. I have an 813 amp in the garage but why bother with someone that is not clever enough to send along his location as this is not something I want to ship. His loss. 73 - Mike

Just got back from Vacation and started reading the backlog of email, looking forward to reading about the boatanchors NG and was very disappointed in what I found: Porn, open flame wars, and mostly ads for crap on ebay. It seems as though this NG has lost it's focus. This used to be a great place to learn about old rigs. What happened?

73,
Eric

From: "Sindre Torp"
Subject: All known Drake-units listed

Hi folks,

I have now listed all known Drake communications units and accessories on my
WEB-site; at least all the units that I know.

Please observe that my WEB-site has got a new URL:
http://home.online.no/~sindtorp/

You'll find the Drake-models listed under "Drake equipment list". All kind
of versions regarding color etc. are there; 338 items in total!
I have NOT listed Drake's assistive listening products and satellite TV
products.
My "Drake-want-list" is also there; 19 items only.

I would be very thankful to receive e-mails if you know of any Drake-models
that I have not listed.

I hope that you will find the list useful, and you are welcome to add my
site to your links.

Thanks and 73,
Sindre, LA6OP

Subject: FL2100B Yaesu linear amp

I have for sale a Yaesu FL2100B linear amp. I would rate it an 8 in
appearance. It just was gone through completely by a ham friend whos a
certified tech. It has new power supply diodes, a good set of finals, bias mod
fix, AG6K plate suppression mod, fans were cleaned and oiled, plus heavy duty
fixed caps installed in place of the light ones where they switch them in on
75 mtrs. Have the original manual too. Front panel is in good shape but there
is a crack in the meter cover face (might find a replacement.) The amp puts
out a solid 600 w or better/ $350 or BO

Jerry, your mistaken, I typically give advice Yes, Because I don't try and fight with them and whine about the illegal use of the amplifiers (LIKE YOU DO) doesn't mean anything, you go into a newsgroup and attempt to act like GOD!! you try to stir up problems, AS YOUR TRYING HERE! Your the first one to CRY CBER!! you make every attempt to belittle EVERYONE YOU CAN! I remember The dispute a while back!! My point WAS that being a decent person and NOT trying to Tell every person who runs an Amplifier on 11 meters what they already know, (that it is illegal) and imposing an ATTITUDE like you have. Gets absolutely NOWHERE! I Attempt to help them yes, I also make an attempt to get them to go forward with there hobby! Perhaps to even someday use there 11 meter equipment in a proper and legal manner as HAM! You Sir (term used loosely) just enjoy arguing and causing discontent! They have a term for persons like yourself it is "TROLL" If i were attempting to hide my identity I would post via dejanews with some un-known handle! What you fail to understand is with or without any advice i may attempt to dispense, the amplifiers will be run on 11 meters! If I make an attempt to at least have it run in a correct manner, and try to entice someone into becoming a Ham operator in the process, I think in the long run it is beneficial! Not everyone who runs a CB is a terrible person, just as not all Hams are great persons! Most of the Hams I know locally all started there radio hobby as CBers on SSB, I enjoy my hobby FULLY, and choose to talk to folks on 11meters as well as HF, this does not make me a terrible Amatuer! I earned my Extra class Ticket! I took the time needed to learn code and passed the 20 WPM exam, most of my life has been dedicated to radio communications! Because I choose to be friendly to folks on 11 meters it DOESN'T make me BAD! You seem to pop out of the woodwork every chance you get to BADMOUTH or BELITTLE folks! It really doesn't matter, I've made an attempt to find some parts for a leaning project, myself, a fellow HAM, and a CBer are all getting together and building this amplifier! Guess what we are ALL great friends! The CBer included, I met this fellow locally, and YES, I gave him advice on his ILLEGAL CB AMP! he will be taking the plunge and testing in two weeks!! So what is wrong with FRIENDLY HELP??? Should I choose to do as you do?? should I belittle my fellow radio hobbyist? If I had chosen to Lecture my local CBer on the legal issues of his amplifier he would still be tearing up the band and running it, regardless of what I said! He currently uses it very little, when he does use it he runs it CLEANLY with his mike gain set at a decent level! We have also become GOOD friends and look forward to talking on the HF bands! I'm hoping he will pass some of his knowledge onto his friends!!

One final point, I will build this amplifier, with, or without help from the good folks of the NG! What i don't find from my posting I will most likely find at the surplus dealers or Hamfests..... I'm sure some folks out here will flame me as you have attempted! However MR.Law, you may be surprised that some folks may not take your side!

Now that you've "EXPOSED ME" Jerry, and attempted to belittle me, and I've responded, I'm sure your pleased with yourself!

My apologies to the group for using bandwidth.....

From: "Alan Melia"
Subject: Toothed Drive belt source??

Hi I have a Wayne Kerr Source& Dectector (model SR268) unit for use with RF bridges. It has a strange toothed belt to drive the rotary switches that indicate the tuning and range. The belts are flat and moulded in green fabric reinforced plastic. There is a flexible spine about 1/8th inch wide with small cylindrical teeth protruding sideways, which engage with the toothed drive wheels. The wheels have a smooth centre region between the the

two rows of teeth. Both my belts have perished and fallen apart. I am sure these are not an in-house component, and they must have been used in other equipment for indexed slip-proof drives.
Do you know who might have made them or whether anybody stocks these things still??

The lady at WK was very nice but she could not even find their own information on procurement of these items (the unit is no longer made or supported).

Cheers and thanks for your interest

Does anyone have HF, vhf or uhf freq's for U.S. Navy warships ? Also is it possible to contact the ships via ham radio ? Thanks, Sam
alphacentauri@i-plus.net

Date: 30 Jul 2000 20:37:43 GMT
From: oceanradio@aol.com (OCEANRADIO)
Subject: Warship freq's

Sam:
U.S. Navy ships hardly ever operate in a mode you could listen to. Almost everything is encrypted, whether voice or data. There are a couple of exceptions. They monitor and use the international VHF FM frequencies also used by pleasure, fishing, and merchant ships, especially Ch 16 (156.8MHz). You can listen on that frequency, and others, like Ch 13. These channels are used to communicate with other vessels while underway.
Some large U.S. Navy ships have amateur installations. I don't know of any easy way to point you to them.

Date: Sun, 30 Jul 2000 22:55:17 GMT
From: Dave Holford
Subject: Warship freq's

Carrier Battle groups can often be monitored on HF as they coordinate tracking of air and surface targets. Trouble is the frequencies tend to be a bit unpredictable. The mode is SSB and most of the conversation is in the clear with some classified data using "NUCO" in the format "NUCO - then the coded data - UN NUCO". With diligent listening you can often determine which carrier group it is. For example the George Washington battle group communications will once in a while have someone mention "the GW". These nets are characterised by somewhere around 6 to 20 members using single and double letter callsigns. You just have to keep looking. Anytime a major USN or NATO excercise is taking place you are likely to find them somewhere on HF. You will hear references to "alligator" (their HF data link system) and sometimes a callsign of "MAGIC" will be used by NATO AWACS aircraft operating with the battle group.

If you do find them they will frequently stay on the same frequency for several days so they can be monitored for long periods as they exhange

data on targets and attempt to classify them as friendly, neutral or hostile. When they are busy they are really busy, but when things quieten down they tend to be more relaxed and even engage in the odd bit of gossip.

If you are interested in getting a 'heads up' on such nets, or other military communications I suggest you send a message to:

majordomo@qth.net
with "subscribe milcom" in the body of the message.

You will then be a member of the military communications mailing list and start to get regular - lots of them - messages relating to monitorin military communications.

Subject: Warship freq's

Dave:
I'm surprised, and stand corrected.
You can definitely predict that you will hear Navy ships on Ch 16 while at sea when encountering other vessels. They are funny; I've been at sea when they wouldn't give a callsign, though they insist upon knowing your name, callsign, flag, etc. They call themselves "U.S. Navy warship." Off Brazil 3 1/2 years ago a joint force of U.S., Canadian, Brazilian, plus one other NATO ship was patrolling. The interrogating ship (I was aboard a Liberian cargo ship) would not identify itself. We were close enough that I could read the callsign of the nearest one or two Canadian ships shown by the international signal flags painted on the bridge wings.
Tnx.

Howdy all.....Looking for a couple of electrolytic capacitors to repair
a vintage Hammarlund HX500 TX....DESIRED would be original type
twistlock cans with a single isolated capacitor in each (not negative to
can) 40mfd/500wv .....WANTED something close - 40+ mfd/450wv+ single
ended cans....(I can isolate 'em)....2 minimum (ought to have a few for
"the odds") of the same value / rating so as to equalize the string
best. Interested in scrounging or at least NOT paying someones mortgage
- what are you looking for (trades?) - Located Moncton, N.B., Canada.

John, you've read much more into the situation than i stated, I don't make money off the CBer's, I DID NOT justify the Amplifiers on CB, They run them with or without my recomendations! Because I can offer advice and possibly get them to clean up there signal, DOES NOT mean I condone, justify or otherwise endorse the operation. If i can get there interest off CB and focus it on Amateur radio I think I've done a service, Your reference to drug dealers is pretty off-the-wall! Your OLD-FART mentality is showing.....

I just read this thread and I can say this much. I am not trying to
stir up trouble. But I do not approve of any ham helping any one run
or much less build gear that can run illegal levels of power on any
band let alone 11 meters.
And your argument that you are helping "build" these amps is also
quite shallow. I suspect you are more interested in the financial
reward that such a project for these so-called operators on 11 meters
are willing to pony up for.

And you are extra class to boot? Extra crass is more like it.

Name is Fred Sole, call is WB8LVP in Poland, Ohio.

I would like to build a link-coupled antenna tuner and need to locate some air variable capacitors.
The article is from the 1984 ARRL handbook and calls for a 350pf and 100pf caps.

I found some glass vacumm caps on Ebay. Never had one in my hands to look at. Advice on use of these would be appreciated.

-Fred Sole

2526. FS: Drake feet replacements

Newsgroup: rec.radio.amateur.boatanchors
Date: 2000-07-31 00:00:00 UTC
From: anchor@coastalnet.COM
Message-ID: <3.0.6.32.20000731154340.008d5a00@mail2.coastalnet.com>
Source record: 63344

Hi all,
They are not the originals, but once installed, the only visible
difference is that they are "satin black" instead of shiny black.

These are the same outside dimensions as those on all (that I've seen)
4-lines & TR-3/4's, & at least some 7-line, but do not have the soft rubber
insert that some have. They are plastic, with a very slightly soft feel,
not shiny, but "flat black". They are 5/8" tall, tapered 15/16" to 3/4",
and have a hole which will pass a #10 screw, the usual one used, but these
are not threaded, as the originals are. A #10 nut will press into the
recessed bottom, as will a #8 nut. They come with a metal flanged insert
that fits tightly into the hole, and that will pass a #8 screw. So, you
can use either a #10 or #8 screw & nut, supply your own. The std #10's are
not long enough to re-use.

Basically, they are $.50/foot, plus shipping of $1.00 for the first 4, and
$.25 for each additional 4. Please, let's do it in multiples of 4. Here's
a breakdown:
number
of
feet cost, incl. shipping
4 $3.00
8 $5.25
12 $7.50
24 $14.25

any amount over 24 will be at $.50/foot plus $3.20 shipping, and will be
sent in a Priority Mail box. For example:
36 $21.20
48 $27.20

These shipping costs are for continental US, if you are outside the US,
please contact me for shipping charges before sending any money.

Albert Parker

Message-ID: <20000731172427.27569.00002581@ng-fi1.aol.com>
Source record: 63346

Hi,
There are 2 sides to this. First, on the side of the seller, he may not want an S27, it may not be what he specializes in. It
IS an oddball of a set and he may only want ham band or general coverage sets. On the other side, he may be another greedy, grasping, money hungry creep that is slowly ruining the hobby for a great many of us.... the Bay is a great place to do just that. You reach a great number of people on ebay with your wares, MANY more than if you bought a space at the local hamfest. You get way more than top dollar for your item. You get to chase after deadbeats that are slow to pay or not pay at all. Again the 2 sides theory applies.
Life is great isn't it? Technology is making it even greater isn't it? I, for one, wouldn't want to live in any other time than right now...

Greetings - Any one have any information on a PALOMAR ELECTRONICS model TX 5300 Broad Band HF solid state amplifier for 3 to 30 Mhz? I was told its 10 watts in and a couple hundred out.

Of course all costs paid.

I DON"T HELP THEM RUN IT! read more carefully.... I do not help them
build anything!! again read more carefully!! only thing i mentioned about
building is that 3 of us will be building the 813 amp as a joint project, I
DID NOT say I'm building this amplifier so a CBer can run it!

> And your argument that you are helping "build" these amps is also
> quite shallow.

Where did I make this statement??????? I (MYSELF) am building the amp to
run on 80, I never said I build, or help build CB amps..... All i do is
tell them what they could do to make it run cleaner, in the process I've
been able to get a reasonable number of them interested enough in amatuer
radio to study, test, and eventually have eliminated more than one ILLEGAL
amplifier on 11 meters...

I suspect you are more interested in the financial
> reward that such a project for these so-called operators on 11 meters
> are willing to pony up for.
>

Again this is a personal project, I NEVER stated it was for CB,
reread the post, obviously you need help with your comprehension skills!!!

> And you are extra class to boot? Extra crass is more like it.

Fred, you are quite obviously making too many assumptions! I
think that you fit much better in the CRASS category!
